**Agenda-setting Dynamics in Canada** Stuart Neil Soroka,2002 Why do public issues like the environment rise and fall in importance over time To what extent can the trends in salience be explained by real world factors To what degree are they the product of interactions between media content public opinion and policymaking This book surveys the development of eight issues in Canada over a decade AIDS crime the debt deficit the environment inflation national unity taxes and unemployment to explore how the salience of issues changes over time and to examine why these changes are important to our understanding of everyday politics Agenda Setting Dynamics in Canada offers one of the first empirical analyses of the interaction of the media the public and policymakers in Canada and more generally makes an important contribution to the study of political communications and policymaking well beyond the Canadian context

*The Theory of Environmental Agreements and Taxes* Martin Enevoldsen,2005-01-01 Martin Enevoldsen's book is a pioneering work that compares the impacts of various non regulatory environmental strategies in achieving measurable pollution reductions Much has been written on the

theoretical virtues and drawbacks of green taxation versus the adoption of voluntary agreements when it comes to effective implementation of environmental goals In convincing detail this book makes the case for the effectiveness of environmental taxation its barriers being primarily political in nature rather than economic Green taxes are highly controversial even in the most environmentally conscious nations particularly when they are regarded as a purely fiscal instrument The successful Danish CO2 taxation on industry which this study proves to be much more effective than the Dutch system of voluntary agreements or the Austrian laissez faire policies relied not only on the inducement of the CO2 tax itself all of the tax revenue was ploughed back into industry as subsidies for investments in advanced energy saving technologies Martin Enevoldsen s book is simply a must for political scientists environmental economists and environment policymakers Svend Auken M P and former Danish Minister for Environment and Energy Although there is a huge demand for accurate analysis of environmental policy outcomes in both the academic and policy making communities there is currently very little theoretical research on this issue This ambitious book redresses the balance by constructing a new theoretical framework at the crossroads between economics and political science to account for the effectiveness of environmental governance Drawing on insights from new institutional economics environmental economics collective action theory and social capital theory the author analyses how policy outcomes are influenced by institutional factors that constrain and empower the target groups of environmental regulation

**Econometric Modelling with Time Series** Vance Martin, Stan Hurn, David Harris, 2013 Maximum likelihood estimation is a general method for estimating the parameters of econometric models from observed data. The principle of maximum likelihood plays a central role in the exposition of this book since a number of estimators used in econometrics can be derived within this framework. Examples include ordinary least squares, generalized least squares, and full information maximum likelihood. In deriving the maximum likelihood estimator, a key concept is the joint probability density function (pdf) of the observed random variables  $y_t$ . Maximum likelihood estimation requires that the following conditions are satisfied:

1. The form of the joint pdf of  $y_t$  is known.
2. The specification of the moments of the joint pdf are known.
3. The joint pdf can be evaluated for all values of the parameters.

Parts ONE and TWO of this book deal with models in which all these conditions are satisfied. Part THREE investigates models in which these conditions are not satisfied and considers four important cases:

- First, if the distribution of  $y_t$  is misspecified, resulting in both conditions 1 and 2 being violated, estimation is by quasi maximum likelihood. Chapter 9.
- Second, if condition 1 is not satisfied, a generalized method of moments estimator. Chapter 10.
- Third, if condition 2 is not satisfied, estimation relies on nonparametric methods. Chapter 11.
- Fourth, if condition 3 is violated, simulation-based estimation methods are used. Chapter 12.

1.2 Motivating Examples To highlight the role of probability distributions in maximum likelihood estimation, this section emphasizes the link between observed sample data and 4. The Maximum Likelihood Principle: the probability distribution from which they are drawn. Provided by publisher.

The Econometrics of Panel Data László Mátyás, Patrick Sevestre, 2013-12-01 The aim of this volume is to provide a general overview of the econometrics of panel data, both from a theoretical and from an applied viewpoint. Since the pioneering papers by Kuh (1959), Mundlak (1961), Hoch (1962), and Balestra and Nerlove (1966), the pooling of cross-section and time series data has become an increasingly popular way of quantifying economic relationships. Each series provides information lacking in the other, so a combination of both leads to more accurate and reliable results than would be achievable by one type of series alone. Over the last 30 years, much work has been done investigating the properties of the applied estimators and test statistics, analysis of dynamic models, and the effects of eventual measurement errors, etc. These are just some of the problems addressed by this work. In addition, some specific difficulties associated with the use of panel data, such as attrition, heterogeneity, selectivity bias, pseudo panels, etc., have also been explored. The first objective of this book, which takes up Parts I and II, is to give as complete and up-to-date a presentation of these theoretical developments as possible. Part I is concerned with classical linear models and their extensions. Part II deals with nonlinear models and related issues: logit and probit models, latent variable models, incomplete panels, and selectivity bias and point processes.

**Econometric Business Cycle Research** Jan Jacobs, 2012-12-06 *Econometric Business Cycle Research* deals with econometric business cycle research. EBCR, a term introduced by the Nobel laureate Jan Tinbergen for his econometric method of testing economic business cycle

theories EBCR combines economic theory and measurement in the study of business cycles i.e ups and downs in overall economic activity We assess four methods of EBCR business cycle indicators simultaneous equations models vector autoregressive systems and real business indicators After a sketch of the history of the methods we investigate whether the methods meet the goals of EBCR the three traditional ones description forecasting and policy evaluation and the one Tinbergen introduced the implementation testing of business cycles The first three EBCR methods are illustrated for the Netherlands a typical example of a small open economy The main conclusion of the book is that simultaneous equation models are the best vehicle for EBCR if all its goals are to be attained simultaneously This conclusion is based on a fairly detailed assessment of the methods and is not overturned in the empirical illustrations The main conclusion does not imply the end of other EBCR methods Not all goals have to be met with a single vehicle other methods might serve the purpose equally well or even better For example if one is interested in business cycle forecasts one might prefer a business cycle indicator or vector autoregressive system A second conclusion is that many ideas concepts that play an important role in current discussions about econometric methodology in general and EBCR in particular were put forward in the 1930s and 1940s A third conclusion is that it is difficult if not impossible to compare the outcomes of RBC models to outcomes of the other three methods because RBC modellers are not interested in modelling business cycles on an observation per observation basis A more general conclusion in this respect is that methods should adopt the same concept of business cycles to make them comparable
