Reactive Extraction:

Reactive Extraction Hans-Jörg Bart, 2013-04-17 This booklet is designed to bridge the gap between handbooks and technical literature and aims at graduate students or experienced readers Commercial flow sheeting simulation software is increasingly available and is used in the early steps of process design in industry As to this more sophisticated and precise models based on activities instead of concentrations should be used After an introductory chapter there is in Chapter 2 an intensive discussion of reactive phase equilibria of ionic and non ionic solutes based on chemical potentials Chapter 3 introduces to multicomponent diffusion and mass transfer However the main focus is on the reactive mass transfer on rigid and mobile surfaces where the interfacial reaction molecular diffusion and adsorption layers are decisive The respective extraction of zinc with a cation exchanger and of acetic acid with an anion exchanger is discussed as case studies Since adsorption layers and surfactants have a major impact on liquid liquid extraction efficiency the final chapter reviews several techniques which make use of polymeric species in an extractive process A short review is also given on extraction apparatus and the hydrodynamics hydraulic design droplet population balances of columns Much of the booklet is based on the PhD works of C Czapla 2000 G Modes 2000 H Klocker 1996 T Kronberger 1995 M Marters 2000 M Roos 2000 M Traving 2000 and B Wachter 1996 who I wish to thank for their fruitful contributions *Intensification of Biobased Processes* Andrzej Górak, Andrzej Stankiewicz, 2018-06-18 In recent years bioprocessing has increased in popularity and importance however bioprocessing still poses various important techno economic and environmental challenges such as product yields excessive energy consumption for separations in highly watery systems batch operation or the downstream processing bottlenecks in the production of biopharmaceutical products Many of those challenges can be addressed by application of different process intensification technologies discussed in the present book The first book dedicated entirely to this area *Intensification of Biobased Processes* provides a comprehensive overview of modern process intensification technologies used in bioprocessing The book focusses on four different categories of biobased products bio fuels and platform chemicals cosmeceuticals food products and polymers and advanced materials It will cover various intensification aspects of the processes concerned including bio reactor intensification intensification of separation recovery and formulation operations and process integration This is an invaluable source of information for researchers and industrialists working in chemical engineering biotechnology and process engineering **Mass Transfer** A.
