Bettina Kümmerling-Meibauer, Jörg Meibauer, Kerstin Nachtigäller, Katharina J. Rohlfing, 2015-02-20 Picturebooks understood as a series of meaningful text picture relations are increasingly acknowledged as an autonomous sub genre of children's literature. Being highly complex aesthetic products their use is deeply embedded in specific situations of joint attention between a caregiver and a child. This volume focuses on the question of what children may learn from looking at picturebooks whether printed in a book format created in a digital format or self produced by educationalists and researchers. Interest in the relationship between cognitive processes and children's literature is growing rapidly and in this book theoretical frameworks such as cognitive linguistics, cognitive narratology, cognitive poetics and cognitive psychology have been applied to the analysis of children's literature. Chapters gather empirical research from the fields of literary studies, linguistics and cognitive psychology together for the first time to build a cohesive understanding of how picturebooks assist learning and development. International contributions explore language acquisition, the child's cognitive development, emotional development, literary acquisition, literary literacy, visual literacy. Divided into three parts considering symbol based learning, co-constructed learning and learning language skills, this cross disciplinary volume will appeal to researchers, students and professionals engaged in children's literature and literacy studies as well as those from the fields of cognitive and developmental psychology, linguistics and education.

Handbook of Early Literacy Research Susan B. Neuman, David K. Dickinson, 2011-10-10 The field of early literacy has seen significant recent advances in theory, research and practice. These volumes bring together leading authorities to report on current findings, integrate insights from different disciplinary perspectives and explore ways to provide children with the strongest possible literacy foundations in the first 6 years of life. The Handbook first addresses broad questions about the nature of emergent literacy, summarizing current knowledge on cognitive pathways, biological underpinnings and the importance of cultural contexts. Chapters in subsequent sections examine various strands of knowledge and skills that emerge as children become literate, as well as the role played by experiences with peers and families. Particular attention is devoted to the challenges involved in making schools work for all children, including members of linguistic and ethnic minority groups and children living in poverty. Finally, approaches to instruction, assessment and early intervention are described and up to date research on their effectiveness is presented.
