Redundant Space Howard Green, Paul Foley, 1986 Democratic Despotism Swagato Sarkar, 2022-07-29 This book explores the history of forced land acquisition and transformation of power in the Fifth Schedule areas in India. It examines the contradictory imperatives of extractive capitalism and primitive accumulation on the one hand and autonomy and devolution of power to local communities on the other. The book traces the long history of conflict, displacement and violence in these areas in central India which are home to the Adivasis or indigenous people and are rich in natural resources. Drawing from an analysis of public policy debates, land acquisition acts and political and developmental interventions, the book critically looks at the relationship between capitalism, dispossession and democracy. The author investigates how the state constructed a weak democracy amenable for primitive accumulation, the role of NGOs in this process, the struggle for sovereignty and autonomy by local communities and the attempts made by human rights activists to find judicial redressal to state violence. Through this engagement, the book offers a new theory of power. This book will interest researchers and students of political science, political anthropology, governance and public policy, development studies, sociology, law and government, minority and indigenous studies and Odisha and South Asian studies High Performance Geographic Information System Wei Xiong, Ye Wu, Xue Ouyang, Qing-ren Jia, Hao Chen, Luo Chen, 2024-10-15 The development of earth observation and computing technology has promoted the wide application of spatio-temporal big data and artificial intelligence. The enrichment of data and the improvement of computational performance make it possible to perform spatio-temporal analysis and computation on a larger scale. Therefore, it is necessary to study the optimization methods and application methods of high performance geocomputing, starting from GIS architecture in order to form a high performance GIS that can serve the society and economy and support various applications. This book focuses on the architecture, technology platform and application of high performance GIS, analyzes the key technologies of spatio-temporal big data organization and access, parallelized spatial analysis and processing, large scale map rendering and parallel visualization. Under the high performance computing architecture, it explains how to build high performance geographic information applications and looks forward to the trend of the new generation of GIS **Agent-based Approaches in Economic and Social Complex Systems** Akira Namatame, Takao Terano, Koichi Kurumatani, 2002 This volume explores the field of artificial intelligence and features in-depth coverage of important theoretical areas including computational organization, computational economics, computational approaches in social science and game theory.
