 A. Strosio,2000 Foreword by Charles H Townes This volume includes highlights of the theories underlying the essential  
 phenomena occurring in novel semiconductor lasers as well as the principles of operation of selected heterostructure lasers  
 To understand scattering processes in heterostructure lasers and related optoelectronic devices it is essential to consider the  
 role of dimensional confinement of charge carriers as well as acoustical and optical phonons in quantum structures Indeed it  
 is important to consider the confinement of both phonons and carriers in the design and modeling of novel semiconductor  
 lasers such as the tunnel injection laser quantum well intersubband lasers and quantum dot lasers The full exploitation of  
 dimensional confinement leads to the exciting new capability of scattering time engineering in novel semiconductor lasers As  
 a result of continuing advances in techniques for growing quantum heterostructures recent developments are likely to be  
 followed in coming years by many more advances in semiconductor lasers and optoelectronics As our understanding of these  
 devices and the ability to fabricate them grow so does our need for more sophisticated theories and simulation methods  
 bridging the gap between quantum and classical transport      *Semiconductor Lasers* ,1995      Semiconductor Lasers Junji  
 Ohtsubo,2012-10-05 This third edition of Semiconductor Lasers Stability Instability and Chaos was significantly extended In  
 the previous edition the dynamics and characteristics of chaos in semiconductor lasers after the introduction of the  
 fundamental theory of laser chaos and chaotic dynamics induced by self optical feedback and optical injection was discussed  
 Semiconductor lasers with new device structures such as vertical cavity surface emitting lasers and broad area

semiconductor lasers are interesting devices from the viewpoint of chaotic dynamics since they essentially involve chaotic dynamics even in their free running oscillations These topics are also treated with respect to the new developments in the current edition Also the control of such instabilities and chaos control are critical issues for applications Another interesting and important issue of semiconductor laser chaos in this third edition is chaos synchronization between two lasers and the application to optical secure communication One of the new topics in this edition is fast physical number generation using chaotic semiconductor lasers for secure communication and development of chaos chips and their application As other new important topics the recent advance of new semiconductor laser structures is presented such as quantum dot semiconductor lasers quantum cascade semiconductor lasers vertical cavity surface emitting lasers and physical random number generation with application to quantum key distribution Stabilities instabilities and control of quantum dot semiconductor lasers and quantum cascade lasers are important topics in this field
