Semiconductor Plasma Instabilities:

Semiconductor Plasma Instabilities, Including Gunn-effect and Avalanche Oscillations Hans Hartnagel, 1969 Plasma and Current Instabilities in Semiconductors Juras Pozhela, 2017-05-03 Plasma and Current Instabilities in Semiconductors details the main ideas in the physics of plasma and current instabilities in semiconductors The title first covers plasma in semiconductors and then proceeds to tackling waves in plasma Next the selection details wave instabilities in plasma and drift instabilities The text also discusses hot electrons along with the instabilities due to inter valley electron transfer The next chapters talks about avalanche and recombination instabilities The last chapter deals with plasma streams The book will be of great use to student and professional electronics engineers and technicians **Semiconductor Plasma Instabilities** Hans Hartnagel, 1969 **Handbook on Plasma Instabilities** Ferdinand F. Cap, 2013-09-11 Handbook on Plasma Instabilities Volume 3 is primarily intended to serve as a sourcebook for obtaining quick information and literature references pertaining to a specific topic Such a handbook has to be formulated in a way that enables understanding of any one section without requiring full understanding of any other section Volume 1 Chapters 1 13 presents the fundamental concepts of plasma physics with applications and has more the nature of a textbook treating basic plasma physics containment waves and macroscopic instabilities Volume 2 Chapters 14 17 covers various aspects of microinstabilities beam plasma systems stabilization methods and parametric effects The present volume Chapters 18 22 starts with a discussion on feedback and dynamic stabilization using parametric and other effects It then treats nonlinear effects and laser plasma systems One chapter is devoted to applications and use of instabilities It concludes with a report on plasma waves and instabilities in cosmic space *Semiconductor Plasma Instabilities, Including Gunn-effect and Avalanche Oscillations*, 1969

Negative Differential Resistance and Instabilities in 2-D Semiconductors N. Balkan, B.K. Ridley, A.J.

Vickers, 2012-12-06 Instabilities associated with hot electrons in semiconductors have been investigated from the beginning of transistor physics in the 1940s The study of NDR and impact ionization in bulk material led to devices like the Gunn diode and the avalanche photo diode In layered semiconductors domain formation in HEMTs can lead to excess gate leakage and to excess noise The studies of hot electron transport parallel to the layers in heterostructures single and multiple have shown abundant evidence of electrical instability and there has been no shortage of suggestions concerning novel NDR mechanisms such as real space transfer scattering induced NDR inter sub band transfer percolation effects etc Real space transfer has been exploited in negative resistance PETs NERFETs and in the charge injection transistor CHINT and in light emitting logic devices but far too little is known and understood about other NDR mechanisms with which quantum well material appears to be particularly well endowed for these to be similarly exploited The aim of this book is therefore to collate what is known and what is not known about NDR instabilities and to identify promising approaches and techniques which will increase our

understanding of the origin of these instabilities which have been observed during the last decade of investigations into high field longitudinal transport in layered semiconductors The book covers the fundamental properties of hot carrier transport and the associated instabilities and light emission in 2 dimensional semiconductors dealing with both theory and experiment

Transitions in Semiconductors Eckehard Schöll,2012-12-06 Semiconductors can exhibit electrical instabilities like current runaway threshold switching current filamentation or oscillations when they are driven far from thermodynamic equilibrium This book presents a coherent theoretical description of such cooperative phenomena induced by generation and recombination processes of charge carriers in semiconductors **Quantum Kinetic Theory** Michael Bonitz,2015-11-20

This book presents quantum kinetic theory in a comprehensive way The focus is on density operator methods and on nonequilibrium Green functions The theory allows to rigorously treat nonequilibrium dynamics in quantum many body systems Of particular interest are ultrafast processes in plasmas condensed matter and trapped atoms that are stimulated by rapidly developing experiments with short pulse lasers and free electron lasers To describe these experiments theoretically the most powerful approach is given by non Markovian quantum kinetic equations that are discussed in detail including computational aspects **Plasma Instabilities and Anomalous Transport** William B. Damage in Optical Materials ,1974 **Spontaneous Formation of Space-Time Structures and Criticality** T. Riste,David Sherrington,2012-12-06 This volume contains the proceedings of a NATO Advanced study Institute held at Geilo Norway between 2-12 april 1991 This institute was the eleventh in a series held biannually at Geilo on the subject of phase transitions It was intended to capture the latest ideas on selforganized patterns and criticality The Institute brought together many lecturers students and active researchers in the field from a wide range of NATO and non NATO countries The main financial support came from the NATO scientific Affairs Division but additional support was obtained from the Norwegian Research Council for Science and the Humanities NAVF and Institutt for energi teknikk The organizers would like to thank all these contributors for their help in promoting an exciting and rewarding meeting and in doing so are confident that they echo the appreciation of all the participants In cooperative equilibrium systems physical states are described by spatiotemporal correlation functions The intimate connection between space and time correlations is especially apparent at the critical point the second order phase transition where the spatial range and the decay time of the correlation function both become infinite The salient features of critical phenomena and the history of the development of this field of science are treated in the first chapter of this book **Nuclear Science Abstracts** ,1972 **Fusion Energy Update** ,1979 Laser
