Josef Kral, Jaroslav Lukes, Ivan Netuka, Jiri Vesely, 2007-02-08 The volume comprises eleven survey papers based on survey lectures delivered at the Conference in Prague in July 1987 which covered various facets of potential theory including its applications in other areas The survey papers deal with both classical and abstract potential theory and its relations to partial differential equations stochastic processes and other branches such as numerical analysis and topology A collection of problems from potential theory compiled on the occasion of the conference is included with additional commentaries in the second part of this volume Functional Analysis and Evolution Equations Herbert Amann, Wolfgang Arendt, Frank

Neubrandner, Serge Nicaise, Joachim Below, 2008-02-28 Gunter Lumer was an outstanding mathematician whose works have great influence on the research community in mathematical analysis and evolution equations He was at the origin of the breath taking development the theory of semigroups saw after the pioneering book of Hille and Phillips from 1957 This volume contains invited contributions presenting the state of the art of these topics and reflecting the broad interests of Gunter Lumer Complex Potential Theory Paul M. Szökefalvi-Nagy, 2013-03-07 These Proceedings form a record of the lectures presented at the international Conference on Functional Analysis and Approximation held at the Oberwolfach Mathematical Research Institute August 9-16 1980 They include 33 of the 38 invited conference papers as well as three papers subsequently submitted in writing Further there is a report devoted to new and unsolved problems based on two special sessions of the conference The present volume is the sixth Oberwolfach Conference in Birkhäuser's ISNM series to be edited at Aachen It is once again devoted to more significant results obtained in the wide areas of approximation theory harmonic analysis functional analysis and operator theory during the past three years Many of the papers solicited not only outline fundamental advances in their fields but also focus on interconnections between the various research areas The papers in the present volume have been grouped into nine chapters Chapter I on operator theory deals with maps on positive semidefinite operators spectral bounds of semigroup operators evolution equations of diffusion type the spectral theory of propagators and generalized inverses Chapter II on functional analysis contains papers on modular approximation interpolation spaces and unconditional bases **Séminaire de Théorie du Potentiel, Paris, No. 6**, 2006-11-14 **Value Distribution of**

Meromorphic Functions Jianhua Zheng, 2011-03-31 Value Distribution of Meromorphic Functions focuses on functions meromorphic in an angle or on the complex plane T directions deficient values singular values potential theory in value distribution and the proof of the celebrated Nevanlinna conjecture The book introduces various characteristics of meromorphic functions and their connections several aspects of new singular directions new results on estimates of the

number of deficient values new results on singular values and behaviours of subharmonic functions which are the foundation for further discussion on the proof of the Nevanlinna conjecture The independent significance of normality of subharmonic function family is emphasized This book is designed for scientists engineers and post graduated students engaged in Complex Analysis and Meromorphic Functions Dr Jianhua Zheng is a Professor at the Department of Mathematical Sciences Tsinghua University China

Hedberg, 2012-12-06 Function spaces especially those spaces that have become known as Sobolev spaces and their natural extensions are now a central concept in analysis In particular they play a decisive role in the modern theory of partial differential equations PDE Potential theory which grew out of the theory of the electrostatic or gravitational potential the Laplace equation the Dirichlet problem etc had a fundamental role in the development of functional analysis and the theory of Hilbert space Later potential theory was strongly influenced by functional analysis More recently ideas from potential theory have enriched the theory of those more general function spaces that appear naturally in the study of nonlinear partial differential equations This book is motivated by the latter development The connection between potential theory and the theory of Hilbert spaces can be traced back to C F Gauss 181 who proved with modern rigor supplied almost a century later by O Frostman 1958 the existence of equilibrium potentials by minimizing a quadratic integral the energy This theme is pervasive in the work of such mathematicians as D Hilbert Ch J de La Vallée Poussin M Riesz O

Dellacherie, P.-A. Meyer, 2011-08-18 This third volume of the monograph examines potential theory The first chapter develops potential theory with respect to a single kernel or discrete time semigroup All the essential ideas of the theory are presented excessive functions reductions sweeping maximum principle The second chapter begins with a study of the notion of reduction in the most general situation possible the gambling house of Dubins and Savage The beautiful results presented have never been made accessible to a wide public These are then connected with the theory of sweeping with respect to a cone of continuous functions and the integral representation in compact convex sets The third chapter presents new or little known results with the aim of illustrating the effectiveness of capacity methods in the most varied fields The last two chapters are concerned with the theory of resolvents The fourth and last part of the English edition will be devoted to the theory of Markov processes **Introduction to Global Variational Geometry** Demeter Krupka, 2000-04-01 This book provides a comprehensive introduction to modern global variational theory on fibred spaces It is based on differentiation and integration theory of differential forms on smooth manifolds and on the concepts of global analysis and geometry such as jet prolongations of manifolds mappings and Lie groups The book will be invaluable for researchers and PhD students in differential geometry global analysis differential equations on manifolds and mathematical physics and for the readers who wish to undertake further rigorous study in this broad interdisciplinary field Featured topics Analysis on manifolds Differential forms on jet spaces Global variational
