Abstract. Bibliometric information retrieval in databases can employ different strategies. Commonly, queries are performed by searching in title, abstract and/or author keywords (author vocabulary). More advanced queries employ database keywords to search in a controlled vocabulary. Queries based on search terms can be augmented with their citing papers if a research field cannot be curtailed by the search query alone. Here, we present another strategy to discover the most important papers of a research field. A marker paper is used to reveal the most important works for the relevant community. All papers co-cited with the marker paper are analyzed using Reference Publication Year Spectroscopy (RPYS). For demonstration of the marker paper approach, density functional theory (DFT) is used as a research field. Comparisons between a prior RPYS on a publication set compiled using a keyword-based search in a controlled vocabulary and a co-citation RPYS (RPYS-CO) show very similar results. Similarities and differences are discussed.

Keywords: Bibliometrics, RPYS, RPYS-CO, marker paper, seminal papers, historical roots, DFT

1 Introduction

Information retrieval in databases can be performed using different routes. Commonly, searches are performed via search terms (author vocabulary) in the full-text or in certain sections of a paper (e. g., title, abstract, and/or author keywords). Some databases also offer controlled vocabulary (i. e., keywords assigned by the database producer) to be searched. Searches in author vocabulary often require a strategy which is called "interactive query formulation" and was extensively discussed by Wacholder [1]. This strategy was applied for example in Haunschild, Bornmann and Marx [2] and Wang, Pan, Ke, Wang and Wei [3] to analyze the literature about climate change. A search in controlled vocabulary often needs less search terms and less complicated queries. For example, Haunschild, Barth and Marx [4] used a rather concise search query in the controlled vocabulary of C_AplusSM to analyze the literature about density functional theory (DFT), a widely used method in the field of computational chemistry.

Besides keyword searches, the citing papers of one specific key-paper (or a few key papers) can be used to retrieve fundamental literature, see e. g., Marx, Haunschild

Computerization Movements and Technology Diffusion

Margaret S. Elliott, Kenneth L. Kraemer, 2008 Computerization movement CM refers to a special kind of social and technological movement that promotes the adoption of computing within organizations and society Through theoretical analyses systematic empirical studies field based studies and case studies of specific technologies the book shows CMs to be driven by Utopian visions of technology that become part of the ether within society The empirical studies presented here show the need for designers users and the media to be aware that CM rhetoric can propose grand visions that never become part of a reality and reinforce the need for critical and scholarly review of promising new technologies Back cover
