Lees' Loss Prevention in the Process Industries Frank

Lees,2005-01-25 Over the last three decades the process industries have grown very rapidly with corresponding increases in the quantities of hazardous materials in process storage or transport Plants have become larger and are often situated in or close to densely populated areas Increased hazard of loss of life or property is continually highlighted with incidents such as Flixborough Bhopal Chernobyl Three Mile Island the Phillips 66 incident and Piper Alpha to name but a few The field of Loss Prevention is and continues to be of supreme importance to countless companies municipalities and governments around the world because of the trend for processing plants to become larger and often be situated in or close to densely populated areas thus increasing the hazard of loss of life or property This book is a detailed guidebook to defending against these and many other hazards It could without exaggeration be referred to as the bible for the process industries This is THE standard reference work for chemical and process engineering safety professionals For years it has been the most complete collection of information on the theory practice design elements equipment regulations and laws covering the field of process safety An entire library of alternative books and cross referencing systems would be needed to replace or improve upon it but everything of importance to safety professionals engineers and managers can be found in this all encompassing reference instead Frank Lees world renowned work has been fully revised and expanded by a team of leading chemical and process engineers working under the guidance of one of the world s chief experts in this field Sam Mannan is professor of chemical engineering at Texas A principles practice codes standards data and references needed by those practicing in the field

Waste Minimization and Cost Reduction for the Process

Industries Paul N. Cheremisinoff, 1995-12-31 The purpose of this book is to provide a base of information and analysis to assist in implementation of the policy of reducing and or minimizing hazardous waste generation in manufacturing and more specifically in the process industries What is the significance of reducing the generation of all process wastes This book examines the technical nature of waste reduction and the extent to which waste reduction can likely be implemented Also explored is the extent to which technology itself as well as information and resources is a barrier to waste reduction In what ways are waste reduction decisions dependent on specific circumstances Can the amount of feasible waste reduction be estimated Auditing of manufacturing and unit operations and processes are particularly significant and useful in the chemical process industries food pharmaceuticals chemicals fertilizer petrochemicals etc since it is estimated that these industries account for more than half of the hazardous wastes generated This book presents a compilation of complete information on potential sources of waste loss or generation through technical inspection Also presented are calculation methods for determining air waste solid wastes material balances informational requirements and waste reduction analysis The reader should find the book useful in the areas of auditing and waste minimization It is replete with useful information as well as specific case histories which should make it a practical tool for the user
