Serotonin From Cell Biology To Pharmacology And Therapeutics:

Serotonin Paul M. Vanhoutte, Rodolfo Paoletti, Nicoletta Brunello, Franco M. Maggi, 2012-12-06 This volume represents the proceedings of the invited lectures of the first International Symposium on Serotonin from Cell Biology to Pharmacology and Therapeutics which was held in Florence on March 29 April 1989 This meeting held under the co sponsorship of the Serotonin Club and the Fondazione Giovanni Lorenzini represents the first attempt to bring together scientists fascinated by the complexity of the action of 5 hydroxytryptamine throughout the body and in various species Hence this volume provides the reader with the unique overview of the sources effects receptors physiological actions and pathological role of Serotonin As such it will be of interest not only to the person devoting her or his research efforts to the study of 5 hydroxytryptamine but also to all scholars and even clinicians wanting to know how the powerful monoamine can modulate cellular functions To accelerate the publication of these proceedings the Editors and the publishers have selected the camera ready format and have avoided a lengthy refereeing process Hence the scientific content of and the opinions expressed in the chapters are the sole responsibility of the authors The Editors Milan and Houston The Editors want to thank Mrs H Liepman and her staff at Kluwer for the prompt and efficient handling of the manuscripts

International Symposium on Serotonin from Cell Biology to Pharmacology and Therapeutics ,1989* Basic Mechanisms of the EEG

Zschocke, Speckmann, 2012-12-06 This volume is based on selected and updated papers from the symposium on Basic Mechanisms of the EEG which was held under the sponsorship of the German EEG Society in Hamburg on September 28 29 1990 The intention of this symposium was to relate recent experimental clinical and neuropathological data on the basic mechanism that underlie the EEG Although we know much about these mechanisms there is still much more to be learned The symposium was partly the continuation of an earlier symposium on Origin of Cerebral Field Potentials held in 1979 in Munster under the leadership of one of the present editors E J Speckmann and H Caspers The present work combines new experimental and clinical results with state of the art reports giving excellent general views The first chapter presents a historical survey of the roots of current developments in neurophysiology It seems that in the near future we may decipher the EEG which we have considered up to now somewhat as a cryptogram chapter 2 After chapter 3 a chapter concerned with more general points of the generation of cortical field potentials chapters 4 5 and 6 deal with several aspects and models of interactions and rhythms of cortical neurons The role of glial cells in cortical electrical field generation is considered in chapter 7 Chapter 8 emphasizes the significance of brain metabolism

Jansson,H. Jörnvall,U. Rydberg,L. Terenius,B.L. Vallee,2013-03-13 The 39 chapters in this volume consider subjects ranging from genetics markers and molecular biology of alcoholism to clinical observations and treatment The aim is to integrate pertinent information from the fields of molecular and cell biology with view to establishing a molecular basis of alcohol use and abuse An initial preview summarizes historical aspects of alcohol use and subsequent chapters concern novel drugs pharmacological aspects gene structures cloning and enzymatic properties Also contributions by non traditional alcohol scientists have been included in this collection in order to highlight possible interaction and parallels between different fields Novel results of particular interest include up dated summaries on receptors enzymes and other proteins as well as corresponding gene structures and regulation setting the basis for distinguishing markers and pinpointing further possible pharmacological treatments Medical Management of Cancer-treatment Induced Emesis Mario A. Dicato,2024-11-01 Nausea and vomiting are two of the most common side effects of anti cancer treatment and the discovery and clinical application of 5 hydroxytryptamine₃ receptor antagonists has transformed the management of these side effects resulting in a much improved quality of life for cancer patients This text presents a detailed overview of the management of cancer treatment induced emesis in a number of different treatment settings and focuses on the mechanisms and use of 5 HT₃ receptor antagonists Contributions are also included from the points of view of the nurse and the patient **National Library of Medicine Current Catalog** National Library of Medicine (U.S.), **Progress in Medicinal Chemistry** ,1996-04-24 Progress in Medicinal Chemistry **Serotonergic Neurons and 5-HT Receptors in the CNS** H.G. Kranzler,2012-12-06 In recent years alcohol abuse has received increased international attention Such attention is justified by the enormous negative impact that this disorder has on health as well as on economic and social well being Governmental and other sources of research support have promoted substantial investigation into the negative consequences of alcohol examining both animal models and human subjects Consequently there has been a virtual explosion of preclinical and clinical data much of it focused on alcohol s pharmacologic effects However there have been few efforts to integrate this wealth of new information into a single manageable volume This volume provides an up to date in depth treatment of the pharmacology of alcohol particularly as it relates to alcohol abuse The over riding theme of the book is the interplay between the preclinical and clinical domains Increasingly these areas of investigation have served to inform one another a trend that can be expected to grow with time The topics covered include

the effects of alcohol on biological systems and the impact of medications on those effects In addition recent insights obtained from molecular biological investigations are discussed in terms of their relevance for understanding the effects of alcohol at the cellular level and the implications of these for the development of medications Consideration is also given to important methodological issues that influence the evaluation of medications in the context of clinical trials **NIDA**
