India's Great Soul Wolpert compellingly chronicles the life of Mahatma Gandhi from his early days as a child of privilege to his humble rise to power and his assassination at the hands of a man of his own faith. This trajectory like that of Christ was the result of Gandhi's passion, his conscious courting of suffering as the means to reach divine truth. From his early campaigns to stop discrimination in South Africa to his leadership of a people's revolution to end the British imperial domination of India, Gandhi emerges as a man of inner conflicts, obscured by his political genius and moral vision. Influenced early on by nonviolent teachings in Hinduism, Jainism, Christianity, and Buddhism, he came to insist on the primacy of love for one's adversary in any conflict as the invincible power for change. His unyielding opposition to intolerance and oppression would inspire India like no leader since the Buddha, creating a legacy that would encourage Martin Luther King Jr., Nelson Mandela, and other global leaders to demand a better world through peaceful civil disobedience. By boldly considering Gandhi the man rather than the living god depicted by his disciples, Wolpert provides an unprecedented representation of Gandhi's personality and the profound complexities that compelled his actions and brought freedom to India. The Last Heroes P. Sainath, 2022-11-30. So who really spearheaded India's Freedom Struggle? Millions of ordinary people: farmers, labourers, homemakers, forest produce gatherers, artisans, and others stood up to the British. People who never went on to be ministers, governors, presidents, or hold other high public office. They had this in common: their opposition to Empire was uncompromising. In The Last Heroes, these footsoldiers of Indian freedom tell us their stories. The men, women, and children featured in this book are Adivasis, Dalits, OBCs, Brahmins, Muslims, Sikhs, and Hindus. They hail from different regions, speak different languages, and include atheists and believers, Leftists, Gandhians, and Ambedkarites. The people featured pose the intriguing question: What is freedom? They saw that as going beyond Independence. And almost all of them continued their fight for freedom long after 1947. The post-1947 generations need their stories. To learn what they understood. That freedom and independence are not the same thing. And to learn to make those come together. **Extrusion Processing Technology** Jean-Marie Bouvier, Osvaldo H. Campanella, 2014-03-31. Extrusion is the operation of forming and shaping a molten or dough-like material by forcing it through a restriction or die. It is applied and used in many batch and continuous processes. However, extrusion processing technology relies more on continuous process operations which use screw extruders to handle many process functions such as the transport and compression of particulate components, melting of polymers, mixing of viscous media, heat processing of polymeric and biopolymeric materials, product texturization and shaping, defibering, and chemical impregnation of fibrous materials, reactive extrusion, and fractionation of solid-liquid systems. Extrusion processing technology is highly complex, and in-depth descriptions and discussions are required in order to provide a complete understanding and analysis of this area. This book aims to provide readers with these analyses and discussions. **Extrusion Processing Technology: Food and Non-Food Biomaterials** provides an overview of extrusion processing technology and its established and emerging industrial applications. Potency of process intensification and sustainable processing is also discussed and illustrated. The

book aims to span the gap between the principles of extrusion science and the practical knowledge of operational engineers and technicians. The authors bring their research and industrial experience in extrusion processing technology to provide a comprehensive technical yet readable volume that will appeal to readers from both academic and practical backgrounds. This book is primarily aimed at scientists and engineers engaged in industry research and teaching activities related to the extrusion processing of foods especially cereals snacks textured and fibrated proteins functional ingredients and instant powders feeds especially aquafeeds and petfoods bioplastics and plastics biosourced chemicals paper pulp and biofuels. It will also be of interest to students of food science food engineering and chemical engineering.
