Protecting the Ozone Layer Stephen O. Andersen, K. Madhava Sarma, 2012 In the 1970s the world became aware of a huge danger the destruction of the

stratospheric ozone layer by CFCs escaping into the atmosphere and the damage this could do to human health and the food chain So great was the threat that by 1987 the UN had succeeded in coordinating an international treaty to phase out emissions which over the following 15 years has been implemented It has been hailed as an outstanding success It needed the participation of all the parties governments industry scientists campaigners NGOs and the media and is a model for future treaties This volume provides the authoritative and comprehensive history of the whole process from the earliest warning signs to the present It is an invaluable record for all those involved and a necessary reference for future negotiations to a wide range of scholars students and professionals

Future Spaces of Power Caroline Alphin, E. Leigh McKagen, Shelby E. Ward, 2025-10-16 *Future Spaces of Power* explores political cultural and societal narratives of future space s on a global scale to complicate the cultural logic of systemic futures that exist outside the boundaries of dominant political imaginaries Contributors critically engage with alternative visions found in literature film and other cultural artifacts that encourage us to either live with or escape from the systemic conditions of neoliberalism and late capitalism and consider what these alternative visions might do or fail to do in combating anti democratic futures environmental degradation and new forms of imperialism Through these analyses the volume collectively argues that anti postmodern and postmodern readings of future spaces overlook the everyday lived experiences of certain bodies including chronic health problems effects from systemic racism and other experiences of insecurity fear and death in the face of institutionalized violence by disregarding differential experiences of time within different spatial contexts Contributors suggest that critiques of narratives occurring within and about virtual and metaspaces artificial intelligence space exploration and even the colonization of outer space can provide critical insights concerning global futures and our perceptions of space and time especially as they inform how we should live in the present amid environmental destruction information capitalism neoliberalism and the remaining infrastructures of colonialism Ultimately this book interrogates how a variety of media shape and inform our understanding and assumptions about conceptualizations of future space s as it demonstrates how governmentality eliminates and regulates surplus bodies both overtly and covertly through the technological spatial discursive and temporal management of space

The Global Development Of Policy Regimes To Combat Climate Change Alex Bowen, Nicholas Stern, John Whalley, 2014-04-01 The year 2015 will be a landmark year for international climate change negotiations Governments have agreed to adopt a universal legal agreement on climate change at the 21st Conference of Parties COP21 to the United Nations Framework Convention on Climate Change UNFCCC in Paris in 2015 The agreement will come into force no later than 2020 This book focuses on the prospects for global agreement how to encourage compliance with any such agreement and perspectives of key players in the negotiations the United States India China and the EU It finds that there is strong commitment to the established UN institutions and processes within which the search for further agreed actions will occur There are already a myriad of local and regional policies that are helping to reduce greenhouse gas emissions and build mutual confidence However the chapters

in the book also highlight potential areas of discord For instance varying interpretations of the common but differentiated responsibilities of developing countries agreed as part of the UNFCCC could be a major sticking point for negotiators When combined with other issues such as the choice of consumption or production as the basis for mitigation commitments the appropriate time frame and base date for their measurement and whether level or intensity commitments are to be negotiated the challenges that need to be overcome are considerable The authors bring to bear insights from economics public finance and game theory

Global Warming and East Asia Paul G. Harris, 2004-02-24 Examines the domestic politics foreign policy and international relations of climate change in China Japan and Southeast Asia often disproportionately affected increasing our understanding of a region vital to mitigating and coping with climate

The Organization of Global Negotiations Joanna Depledge, 2013 The basic assumption of this book is that the organization of a negotiation process matters The global negotiations on climate change involve over 180 countries and innumerable observers and other participants addressing enormously complex and economically vital issues with conflicting agendas For the UN to create an effective and well supported international regime has required enormous and very skilful organization factors such as the role of the Chair the choice of negotiating arenas the rules for the conduct of business and the approach of negotiating texts are usually taken for granted and rarely attract attention until something goes wrong This book explores how the negotiations were organized to produce the Kyoto Protocol to the Climate Change Convention and the subsequent Bonn Agreements and Marrakesh Accords The author draws out the lessons and implications for other intricate and far reaching negotiations not all of which have succeeded so far such as the WTO trade negotiations at Seattle and Cancun This is essential reading for all participants in and organizers of international negotiations and for researchers and students of international relations climate change and environmental studies

globalization Bruce C. Greenwald, Judd Kahn, 2008-12-03 In Globalization authors Bruce Greenwald and Judd Kahn cut through the myths surrounding globalization and look more closely at its real impact presenting a more accurate picture of the present status of globalization and its future

consequences Page by page they uncover the real facts about globalization and answer the most important questions it raises including Will globalization increase or diminish in economic importance Do higher living standards depend more on global or local conditions and What are the actual implications of globalization for financial markets

The Environment and International History Scott Kaufman, 2018-12-13 Studies of the history of international relations traditionally have focused on the decisions made by those at the highest levels of government In more recent years scholars have expanded their attention to cover economic cultural or social interactions among nations What has remained largely ignored however is the impact of an increasingly interdependent world upon the environment and conversely how environmental concerns have affected the ecology social relationships economics and politics at national regional and global levels The Environment and International History fills this gap looking at the interrelationship between international politics and the environment Using a transnational and interdisciplinary approach this book examines how imperialism war and a divergence of interests between the developed and underdeveloped world all have had implications for plants animals and humans worldwide

Choosing Environmental Policy Winston Harrington, Richard D. Morgenstern, Thomas Sterner, 2010-09-30 The two distinct approaches to environmental policy include direct regulation sometimes called command and control policies and regulation by economic or market based incentives This book is the first to compare the costs and outcomes of these approaches by examining realworld applications In a unique format paired case studies from the United States and Europe contrast direct regulation on one side of the Atlantic with an incentivebased policy on the other For example Germany's direct regulation of SO₂ emissions is compared with an incentive approach in the U S Direct regulation of water pollution via the U S Clean Water Act is contrasted with Hollands incentive based fee system Additional studies contrast solutions for eliminating leaded gasoline and reducing nitrogen oxide emissions CFCs and chlorinated solvents The cases presented in Choosing Environmental Policy were selected to allow the sharpest most direct comparisons of direct regulation and incentive based strategies In practice environmental policy is often a mix of both types of instruments This innovative investigation will interest scholars students and policymakers who want more precise information as to what kind of blend will yield the most effective policy Are incentive instruments more efficient than regulatory ones Do regulatory policies necessarily have higher administrative costs Are incentive policies more difficult to monitor Are firms more likely to oppose market based instruments or traditional regulation These are some of the important questions the authors address often with surprising results

Gender, Intersectionality and Climate Institutions in Industrialised States Gunnhildur Lily Magnúsdóttir, Annica Kronsell, 2021-06-16 This book explores how climate institutions in industrialized countries work to further the recognition of social differences and integrate this understanding in climate policy making With contributions from a range of expert scholars in the field this volume investigates policy making in climate institutions from the perspective of power as it relates to gender It also considers other intersecting social factors at different levels of governance from the global to the local level

and extending into climate relevant sectors The authors argue that a focus on climate institutions is important since they not only develop strategies and policies they also reproduce power relations promote specific norms and values and distribute resources The chapters throughout draw on examples from various institutions including national ministries transport and waste management authorities and local authorities as well as the European Union and the UNFCCC regime Overall this book demonstrates how feminist institutionalist theory and intersectionality approaches can contribute to an increased understanding of power relations and social differences in climate policy making and in climate relevant sectors in industrialized states In doing so it highlights the challenges of path dependencies but also reveals opportunities for advancing gender equality equity and social justice *Gender Intersectionality and Climate Institutions in Industrialized States* will be of great interest to students and scholars of climate politics international relations gender studies and policy studies The Open Access version of this book available at <https://doi.org/10.4324/9781003052821> has been made available under a Creative Commons Attribution Non Commercial No Derivatives 4.0 license

Understanding Industrial Transformation Xander Olsthoorn, Anna J. Wiczorek, 2006-02-21 A system is just like truth's tail but the truth is like a lizard It will leave the tail in your hand and escape it knows that it will soon grow another one Ivan Sergeevich Turgenev 1818-1883 Letter Paris January 3 1857 to Count Lev Nikolaevich Tolstoy Turgenev Letters ed David a scientist can only come to a partial understanding of industrial transformation processes This is so not only because of the vastness of the topic but because of the inherent limitations of each scientific discipline The common ground which scientists of different disciplines may endeavour to find when approaching some problem is often slight A scientist entering such grounds runs the risk of getting lost losing understanding and only catching the loose tail mentioned above Secondly sciences to make a difference must impress their importance upon the public and convince scientific and policy institutions in order to obtain the means to carry out their mission The editors consider that there has been progress and that this book is a sign of such progress and hope that it provides a further contribution to such advancement Their hope is that this book will also foster co-operation among those approaching this area from dissimilar disciplines and scientific traditions and that it will stimulate progress for all scientists advancing on the international road to global sustainability

The Political Economy of Environmentally Related Taxes OECD, 2006-06-19 This book provides a comprehensive discussion on the effectiveness of environmentally related taxes and their potential for wider use

Handbook of Sustainability Management Christian N. Madu, Chu-hua Kuei, 2012 Sustainability is about the effective management of nonrenewable and nonreplenishable natural resources These resources are limited and critical to maintaining ecological balance A collective effort is required to balance our socio-economic needs with environmental needs This could be achieved by re-evaluating policies and actions as to how they affect the environment Sustainability requires changes in traditional practices of doing things and refocusing ourselves to the needs of the earth This handbook explores the role of sustainability in achieving social development environmental protection

and economic development These three areas constitute what is referred to as the triple bottom line TBL Sustainability management may help organizations and their global supply networks to re evaluate their policies processes programs and projects in terms of triple bottom line Sustainability helps to facilitate planning implementing reviewing and improving an organization s actions and operations to meet ecological goals

The Oxford Handbook of U.S. Environmental Policy Sheldon Kamieniecki,Michael Kraft,2013 Prior to the Nixon administration environmental policy in the United States was rudimentary at best Since then it has evolved into one of the primary concerns of governmental policy from the federal to the local level As scientific expertise on the environment rapidly developed Americans became more aware of the growing environmental crisis that surrounded them Practical solutions for mitigating various aspects of the crisis air pollution water pollution chemical waste dumping strip mining and later global warming became politically popular and the government responded by gradually erecting a vast regulatory apparatus to address the issue Today politicians regard environmental policy as one of the most pressing issues they face The Obama administration has identified the renewable energy sector as a key driver of economic growth and Congress is in the process of passing a bill to reduce global warming that will be one of the most important environmental policy acts in decades The Oxford Handbook of U S Environmental Policy will be a state of the art work on all aspects of environmental policy in America Over the past half century America has been the world s leading emitter of global warming gases However environmental policy is not simply a national issue It is a global issue and the explosive growth of Asian countries like China and India mean that policy will have to be coordinated at the international level The book will therefore focus not only on the U S but on the increasing importance of global policies and issues on American regulatory efforts This is a topic that will only grow in importance in the coming years and this will serve as an authoritative guide to any scholar interested in the issue

The Global Environment Regina S. Axelrod,Stacy D. VanDeveer,2019-07-11 The new edition of The Global Environment Institutions Law and Policy by Regina S Axelrod and Stacy D VanDeveer reflects the latest events in the in global environmental politics and sustainable development while providing balanced coverage of the key institutions environmental issues treaties and policies This award winning book highlights global environmental institutions major state and non state actors and includes a wide range of cases such as climate change biodiversity hazardous chemicals ozone layer depletion nuclear energy and resource consumption

A Climate of Injustice J. Timmons Roberts,Bradley Parks,2006-11-22 The global debate over who should take action to address climate change is extremely precarious as diametrically opposed perceptions of climate justice threaten the prospects for any long term agreement Poor nations fear limits on their efforts to

grow economically and meet the needs of their own people while powerful industrial nations including the United States refuse to curtail their own excesses unless developing countries make similar sacrifices Meanwhile although industrialized countries are responsible for 60 percent of the greenhouse gas emissions that contribute to climate change developing countries suffer the worst and first effects of climate related disasters including droughts floods and storms because of their geographical locations In *A Climate of Injustice* J Timmons Roberts and Bradley Parks analyze the role that inequality between rich and poor nations plays in the negotiation of global climate agreements Roberts and Parks argue that global inequality dampens cooperative efforts by reinforcing the structuralist worldviews and causal beliefs of many poor nations eroding conditions of generalized trust and promoting particularistic notions of fair solutions They develop new measures of climate related inequality analyzing fatality and homelessness rates from hydrometeorological disasters patterns of emissions inequality and participation in international environmental regimes Until we recognize that reaching a North South global climate pact requires addressing larger issues of inequality and striking a global bargain on environment and development Roberts and Parks argue the current policy gridlock will remain unresolved
