Palaeoweathering, Palaeosurfaces and Related Continental Deposits Medard Thiry, Regine Simon Coincon, 2009-04-29
The study of palaeoweathering provides vital clues about past continental environments the correlation of sedimentary deposits and processes such as the rate and timing of uplift and erosion This volume based partly on research presented at IGCP 317 Palaeoweathering Records and Palaeosurfaces contains contributions that use both geochemical and physical approaches to the study of palaeoweathering problems The former are particularly relevant to our understanding of past climates and climate change the latter have applications in the understanding of mass balance between rates of erosion and deposition Palaeoweathering Palaeosurfaces and Related Continental Deposits illustrates the multidisciplinary nature of the subject the diversity of techniques and above all the vital contribution the subject makes to the reconstruction of ancient continental environments This book will be of great value to sedimentologists soil scientists and geomorphologists If you are a member of the International Association of Sedimentologists for purchasing details please see <http://www.iasnet.org/publications/details.asp?code=SP27>

Sediments, Morphology and Sedimentary Processes on Continental Shelves Michael Z. Li, Christopher R. Sherwood, Philip R. Hill, 2012-02-20 The application of multibeam and sediment transport measurement technologies and the adoption of multifaceted research methodologies have greatly advanced our understanding of the sedimentary processes on continental shelves in the last decade This book uniquely blends cutting edge research and state of the art review articles that take stock of new advances in multibeam mapping and sediment transport technologies spatial analysis and modelling and the applications of these advances to the understanding of shelf sediments morphodynamics and sedimentary processes Case studies are also presented to illustrate the utilization of seabed property and process knowledge in habitat mapping and ocean management With its mix of papers focusing on technological advances integration of shelf morphology and processes

and the application of these advances to coastal and ocean management this Special Publication volume will serve as a milestone reference for professional marine scientists and as advanced text for students in marine geology sedimentology and oceanography This book is part of the International Association of Sedimentologists IAS Special Publications The Special Publications from the IAS are a set of thematic volumes edited by specialists on subjects of central interest to sedimentologists Papers are reviewed and printed to the same high standards as those published in the journal Sedimentology and several of these volumes have become standard works of reference

From Depositional Systems to Sedimentary Successions on the Norwegian Continental Margin Allard W. Martinus, R. Ravnås, J. A. Howell, R. J. Steel, J. P. Wonham, 2014-10-06 The Norwegian Continental Shelf NCS focus of this special publication is a prolific hydrocarbon region and both exploration and production activity remains high to this day with a positive production outlook A key element today and in the future is to couple technological developments to improving our understanding of specific geological situations The theme of the publication reflects the immense efforts made by all industry operators and their academic partners on the NCS to understand in detail the structural setting sedimentology and stratigraphy of the hydrocarbon bearing units and their source and seal The papers cover a wide spectrum of depositional environments ranging from alluvial fans to deepwater fans in almost every climate type from arid through humid to glacial and in a variety of tectonic settings Special attention is given to the integration of both analogue studies and process based models with the insights gained from extensive subsurface datasets

Carbonates in Continental Settings, 2009-10-20 This book provides an up to date compilation of the latest research on the petrography facies paleoenvironmental significance and economic aspects of continental carbonates The overall organization of the book first emphasizes the descriptive aspects and processes operating on carbonate deposits in greatly varied settings and then considers applications for basin analysis as well as economic and historical aspects This volume will be a valuable tool for graduate and postgraduate students as well as for experienced researchers The first part volume 61 in this series will deal with the facies environments and processes of carbonates in continental settings Covering the greatly varied aspects of carbonate deposits from continental settings deposits Clear and easy to follow organization of the book Graduate to postgraduate level Up to date information so readers can find references from the classic literature to the most recent research

The History of the Study of Landforms or the Development of Geomorphology, Volume 5 T.P. Burt, A.S. Goudie, H.A. Viles, 2022-10-20 Co published with British Society for Geomorphology This volume is the fifth in the definitive series The History of the Study of Landforms or the Development of Geomorphology Volume 1 1964 dealt with contributions to the field up to 1890 Volume 2 1973 with the concepts and contributions of William Morris Davis and Volume 3 1991 covered historical and regional themes during the classic period of geomorphology 1890 1950 Volume 4 2008 concentrated on studies of geomorphological processes and Quaternary geomorphology between 1890 and 1965 by the end of this period process based studies had become dominant Volume 5 builds on this platform covering in detail the

revolutionary changes in approach that characterized the study of geomorphology in the second half of the twentieth century. It is divided into three sections: the first deals with changes in approach and method, the second with changes in ideas and the broader scientific context within which geomorphology is studied, and the final section details advances in research on processes and landforms. The volume's objective is to describe and analyse many of the developments that provide a foundation for the rich and varied subject matter of twenty-first century geomorphology.

Geochemical Sediments and Landscapes David J. Nash, Sue J. McLaren, 2011-07-18. This state-of-the-art volume reviews both past work and current research with contributions from internationally recognized experts. The book is organized into fourteen chapters and designed to embrace the full range of terrestrial geochemical sediments. An up-to-date and comprehensive survey of research in the field of geochemical sediments and landscapes. Discusses the main duricrusts including calcrete, laterite, and silcrete. Considers deposits precipitated in various springs, lakes, caves, and near coastal environments. Considers the range of techniques used in the analysis of geochemical sediments, representing a significant advance on previous texts.

Linking Diagenesis to Sequence Stratigraphy Sadoon Morad, Marcelo Ketzer, Luis F. de Ros, 2012-11-07. Sequence stratigraphy is a powerful tool for the prediction of depositional porosity and permeability but does not account for the impact of diagenesis on these reservoir parameters. Therefore, integrating diagenesis and sequence stratigraphy can provide a better way of predicting reservoir quality. This special publication consists of 19 papers, reviews, and case studies exploring different aspects of the integration of diagenesis and sequence stratigraphy in carbonate, siliciclastic, and mixed carbonate-siliciclastic successions from various geological settings. This book will be of interest to sedimentary petrologists aiming to understand the distribution of diagenesis in siliciclastic and carbonate successions, to sequence stratigraphers who can use diagenetic features to recognize and verify interpreted key stratigraphic surfaces, and to petroleum geologists who wish to develop more realistic conceptual models for the spatial and temporal distribution of reservoir quality. This book is part of the International Association of Sedimentologists (IAS) Special Publications. The Special Publications from the IAS are a set of thematic volumes edited by specialists on subjects of central interest to sedimentologists. Papers are reviewed and printed to the same high standards as those published in the journal *Sedimentology*, and several of these volumes have become standard works of reference.

Southern African Geomorphology Peter Holmes, Michael Meadows, 2013-01-06. This book covers the geomorphology and landscape evolution of South Africa, focusing on arid landscapes, fluvial systems, karst, Quaternary landscapes, macro-scale geomorphic evolution, coastal geomorphology, and applied geomorphology. It would appeal to postgraduate students in Physical Geography, Geomorphology, and Physical Geology, and all academics in the earth sciences.

Arid Zone Geomorphology David S. G. Thomas, 2011-03-14. The new edition of *Arid Zone Geomorphology* aims to encapsulate the advances that have been made in recent years in the investigation and explanation of landforms and geomorphological processes in drylands. Building on the success of the previous two editions, the Third Edition has been

completely revised and updated to reflect the latest developments in the field Whilst this latest edition will remain a comprehensive reference to the subject the book has been restructured to include regional case studies throughout to enhance student understanding and is clearly defined into five distinct sections Firstly the book introduces the reader to Large Scale Controls and Variability in Drylands and then moves on to consider Surface Processes and Characteristics The Work of Water The Work of the Wind The book concludes with a section on Living with Dryland Geomorphology that includes a chapter on geomorphological hazards and the human impact on these environments Once again recognised world experts in the field have been invited to contribute chapters in order to present a comprehensive and up to date overview of current knowledge about the processes shaping the landscape of deserts and arid regions In order to broaden the appeal of the Third Edition the book has been reduced in extent by 100 pages and the Regional chapters have been omitted in favour of the inclusion of key regional case studies throughout the book The Editor is also considering the inclusion of a supplementary website that could include further images problems and case studies
