R&D Management and Technology Commercialization Orestis Georgiou, Mykola Maksymenko, Stephen Russo, 2025-05-26 Industrial spending for research and development R D initiatives is growing globally year on year from both public and private investments As this spending grows so does the complexity of R D organizations and processes Hence high quality R D management becomes increasingly important to streamline R D processes Intended for R D managers and technology leaders in small medium and large enterprises this book addresses questions such as how to align R D with broader organizational needs best practices for R D hiring and team building how to select which metrics to be measured and the process of moving a technology from the laboratory to the market Criminal Justice Research and Development United States. National Advisory Committee on Criminal Justice Standards and Goals. Task Force on Criminal Justice Research and Development, United States. National Advisory Committee on Criminal Justice Standards and Goals, 1976 Intended for federal state and local policymakers in the area of criminal justice research and development this report includes guidelines for improvement of the quality relevance and utilization of research results In order to cover these issues part two of this report focuses respectively on the needs of research and development policymakers who fund criminal justice research and development researchers who conduct research and development and practitioners who put research and development results into use Guidelines and principles are proposed which should assist policymakers at all levels of government However some topics tend to be addressed more to the federal level where major research and development decisions are often made

The first chapter of this part presents a detailed discussion of institutional support for criminal justice research and development. It describes the federal role in supporting this effort focusing on who the agencies are, the extent of their involvement and how the principal agencies are organized to manage their research and development programs. Recommendations regarding the research and development management activities of criminal justice funding agencies are included. Several important issues in the conduct of criminal justice research and development are examined in the second chapter. Among the topics discussed are constraints on research, ethical issues, research designs and methodologies, prerequisites for sound planning and project selection, ways of maintaining the confidentiality of data and ways of making data more easily available for research and statistical purposes. The final chapter of this section discusses research and development utilization practices and the assumptions underlying current policies in this area. A criticism of these policies and recommendations for new strategies is presented. The final part of this report provides an analysis of the kinds of problems often encountered in research and development. Three general types of criminal justice research and development are discussed: technology, e.g. hardware research; research on problems of criminal justice organizations, e.g. arrest, prosecution, sentencing and parole; and research on new criminal justice problems. For each type of research and development the relevant issues and recommendations are discussed. Most of these, however, are still related to either the support or conduct of research and development. The report also attempts to provide concrete illustrative examples by raising the relevant issues in the context of crime prevention at commercial and residential sites, technology research, sentencing research, research on problems of criminal justice organizations and problems of the victim, research on new criminal justice problems.

The message coming from there is that good chemists swiftly have to become good managers if they are to survive and progress in today's competitive climate. This book is designed to help guide younger R D chemists to ways in which they can quickly evolve skills which are built around three factors: people, knowledge and time. It covers the management of scientific personnel, management within a variety of R D organisational structures, creating a climate of innovation, the management of projects including the time management and communication aspects of the job. The author Peter Bamfield is now working as a consultant. Due to his long experience in the chemical industry he was elected President of the Royal Society of Chemistry's Industrial Affairs Division. This second edition of the book has been revised and updated to take recent global developments and restructuring in the chemical industry into account as well as the rising importance of information technology in management.
