Psychology In Management:

The Psychology of Management Keith Pounds M.B.A.,2008-09 The Psychology of Management focuses on systems thinking in exploring the untold number of forces constantly working within modern organizations This intriguing examination explores how some forces are driving the workplace in one direction while other forces work to restrain that movement Keith Pounds shows how to prevent the inevitable friction caused by the inadequate management of these often unseen and immeasurable forces Readers will also come to better understand and work with the array of employee personalities encountered in the workplace and gain a fascinating look at varying management styles and how they are best put to use Perhaps most importantly The Psychology of Management precisely defines some of the most pervasive management and leadership biases and how they can adversely affect good decision making It will help managers become better equipped in understanding the inner most workings of modern organizations and ensure that they and their organizations become much more competitive

People, Problems, and Profits Saul W. Gellerman,1960 Dr Gellerman eliminates the jargon and mystique that has grown up around much of the practice of industrial psychology He tells the modern executive exactly what applied psychology can and cannot do for their company He explains how an informed manager can work effectively with a consulting psychologist He warns of the dangers of misuse and gives a thorough discussion of the techniques principles and potentials of industrial psychology Dr Gellerman discusses hiring promoting communications human relations company personality a philosophy for mature management and the sometimes surprising role of the neurotic in business Here is a landmark book for today s executive who must cope with the complex problems of the corporate world a guide to help him manage wisely productively and creatively Provided by publisher

The Psychology of Management L M Gilbreth Ph D,L. Gilbreth,2013-12 Definition of Psychology of Management The Psychology of Management as here used means the effect of the mind that is directing work upon that work which is directed and the effect of this undirected and directed work upon the mind of the worker Value of Psychology First of all then what is there in the subject of psychology to demand the attention of the manager Psychology in the popular phrase is the study of the mind It has for years been included in the training of all teachers and has been one of the first steps for the student of philosophy but it has not usually been included among the studies of the young scientific or engineering student or of any students in other lines than Philosophy and Education This not because its value as a culture

subject was not understood but because the course of the average student is so crowded with technical preparation necessary to his life work and because the practical value of psychology has not been recognized It is well recognized that the teacher must understand the working of the mind in order best to impart his information in that way that will enable the student to grasp it most readily It was not recognized that every man going out into the world needs all the knowledge that he can get as to the working of the human mind in order not only to give but to receive information with the least waste and expenditure of energy nor was it recognized that in the industrial as well as the academic world almost every man is a teacher Value of Management The second question demanding attention is Of what value is the study of management The study of management has been omitted from the student s training until comparatively recently for a very different reason than was psychology It was never doubted that a knowledge of management would be of great value to anyone and everyone and many were the queer schemes for obtaining that knowledge after graduation It was doubted that management could be studied otherwise than by observation and practice Few teachers if any believed in the existence or possibility of a teaching science of management Management was assumed by many to be an art by even more it was thought to be a divinely bestowed gift or talent rather than an acquired accomplishment It was common belief that one could learn to manage only by going out on the work and watching other managers or by trying to manage and not by studying about management in a class room or in a text book that watching a good manager might help one but no one could hope really to succeed who had not the knack born in him With the advent of Scientific Management and its demonstration that the best management is founded on laws that have been determined and can be taught the study of management in the class room as well as on the work became possible and actual Value of Psychology of Management Third we must consider the value of the study of the psychology of management This question like the one that precedes it is answered by Scientific Management It has demonstrated that the emphasis in successful management lies on the man not on the work that efficiency is best secured by placing the emphasis on the man and modifying the equipment materials and methods to make the most of the man It has further recognized that the man s mind is a controlling factor in his efficiency and has by teaching enabled the man to make the most of his powers In order to understand this teaching element that is such a large part of management a knowledge of psychology is imperative and this study of psychology as it applies to the work of the manager or the managed is exactly what the psychology of management is
