only 10 percent of the actual number of forming community groups actually succeeded. Ninety percent failed often in conflict and heartbreak. After visiting and interviewing founders of dozens of successful and failed communities along with her own forming community experiences, the author concluded that the successful 10 percent had all done the same five or six things right and the unsuccessful 90 percent had made the same handful of mistakes. Recognizing that a wealth of wisdom were contained in these experiences, she set out to distill and capture them in one place. *Creating a Life Together* is the only resource available that provides step by step practical how to information on how to launch and sustain a successful ecovillage or intentional community. Through anecdotes, stories, and cautionary tales about real communities and by profiling seven successful communities in depth, the book examines the successful 10 percent and why 90 percent fail: the role of community founders, getting a group off to a good start, vision and vision documents, decision making and governance, agreements, legal options, finding financing, and developing land, structuring a community economy, selecting new members, and communication process and dealing well with conflict. Sample vision documents, community agreements, and visioning exercises are included along with abundant resources for learning more.

**Urban Risk Assessments** Thierry Paulais, 2012-06-22. This book presents a framework, the Urban Risk Assessment, for assessing disaster and climate risk in cities which is intended to assist in decision making, urban planning, and designing risk management programs. The approach seeks to strengthen coherence and consensus within and across cities in understanding and planning for risk from natural disasters and climate change. The target audience for this book includes policy makers, urban practitioners, and technical staff and international organizations. The Urban Risk Assessment is a flexible approach based on three reinforcing pillars that collectively contribute to the understanding of urban risk: a hazard impact assessment, an institutional assessment, and a socioeconomic assessment. The URA is designed to allow flexibility in how it is applied, dependent on available financial resources, available data relating to hazards, and its population and institutional capacity of a given city. Based on the identified needs and priorities, city governments can select the most appropriate level of risk assessment. Chapters 1 and 2 of the book are aimed at policy makers with information on why and how to invest in measures that strengthen the understanding of urban risk. Chapter 1 provides background information on the growing importance of disaster and climate risk management strategies at the city level, and Chapter 2 provides guidance on how to operationalize and mainstream the Urban Risk Assessment with ongoing urban management and development activities. Chapters 3 and 4 are aimed at practitioners and provide details on the conceptual approach, components, uses, and monitoring requirements for carrying out an Urban Risk Assessment.
