**The Handbook of Environmental Chemistry** Otto Hutzinger, 1980      Environmental Chemistry of Herbicides Raj Grover, Allan Cessna, 2024-11-15 This publication is rare among those texts on pesticides in that it covers herbicides exclusively It presents in one source information that is typically scattered This important publication enables the reader to recommend herbicide use more reliably and efficiently It also highlights environmental issues relevant to herbicide use in agriculture The book outlines potential areas of further research This title is of particular value to weed scientists environmental chemists and engineers soil scientists and those responsible for recommending and or regulating use of herbicides in agriculture Focuses On Increasing efficiency of herbicides in agriculture Decreasing environmental contamination with herbicides Dissipation and transformations in water and sediment Nature transport and fate of airborne residues Absorption and transport in plants Transformations in biosphere Bioaccumulation and food chain accumulation Photochemical transformations Bound residues Predictability and environmental chemistry      **Emerging Contaminants from Industrial and Municipal Waste** Damià Barceló, Mira Petrovic, 2008-11-04 This book focuses on innovative treatment technologies for the elimination of emerging contaminants in wastewater and drinking water treatment processes The book also discusses sources and occurrence of emerging contaminants in municipal and industrial waste giving an overview of state of the art analytical methods for their identification Further important aspects covered include the acute and chronic effects and overall impact of emerging contaminants on the environment      Contaminated Sediments Tarek A. Kassim, Damià Barceló, 2009-02-12 With contributions by numerous experts      *Marine Chemistry* P.J. Wangersky, 2000-03-27 The carbon dioxide absorption and gas exchange at the sea surface marine aerosols and their photochemistry the oceanic carbon cycle as well as biomarkers in marine ecosystems and related topics are of primary importance for understanding our global ecosystem The topics addressed in this volume are all stemming from areas which have developed only in the last ten years of research or which have gone into decidedly new directions in that time In most cases the recent research has been driven by advances in instrumentation or by large scale international cooperations Thus this volume is also aiming at interdisciplinary and international cooperations in the future      *Organic Bromine and Iodine Compounds* Alasdair H. Neilson, 2003-10-09 This volume addresses a broad spectrum of the environmental issues surrounding organic bromine and iodine compounds It covers their partition among the environmental compartments and the potential for their long range dissemination The important issue of their atmospheric chemistry is discussed in detail in the context of ozone depletion and global warming and the significant difference between the reactions of methyl bromide and methyl iodide are underscored The mammalian toxicity is discussed and the mechanisms of the degradation and transformation of organic bromine and iodine compounds addressed There has been considerable interest in naturally occurring metabolites in the current debate on the fate and partition of methyl bromide that is an important fungicide and is produced in substantial quantities as a

metabolite of marine algae The possible natural occurrence of diphenyl ethers that are used as flame retardants have also been raised A discussion is given on plausible mechanisms for the biosynthesis of representative organic bromine and organic iodine metabolites Reaction pathways are illustrated throughout and comprehensive references are given *The Black Sea Environment* Aleksey N. Kosarev, 2007-10-27 Based on a wealth of primary data collected by expeditions as well as archive data from Russia this fascinating book features a systematic description of the knowledge accumulated on the physical oceanography marine chemistry and pollution marine biology and geology meteorology and hydrology of the Black Sea It presents the principal characteristic features of the environmental conditions of the sea and their changes in the second half of the 20th century *Persistent Organic Pollutants* Heidelore Fiedler, 2002-11-27 Since the mid 1990s legal action to eliminate persistent organic pollutants POPs has started resulting in a global Convention on POPs the Stockholm Convention and a regional Protocol under the Convention on Long Range Transboundary Air Pollution UN ECE LRTAP Convention POPs are characterized by long half lives persistence in the environment they undergo long range transport accumulate in the environment and in biota and they are toxic The combination of these characteristics makes them a threat at the global level This book makes the reader familiar with the goals of these two conventions lays out characteristics of these compounds presents results from case studies and addresses inventories levels in humans and the environment as well as technologies to destroy them Fuel Oxygenates Damià Barceló, 2007-08-03 Environmental Chemistry is a relatively young science Interest in this subject however is growing very rapidly and although no agreement has been reached as yet about the exact content and limits of this interdisciplinary discipline there appears to be increasing interest in seeing environmental topics which are based on chemistry embodied in this subject One of the first objectives of Environmental Chemistry must be the study of the environment and of natural chemical processes which occur in the environment A major purpose of this series on Environmental Chemistry therefore is to present a reasonably uniform view of various aspects of the chemistry of the environment and chemical reactions occurring in the environment The industrial activities of man have given a new dimension to Environmental Chemistry We have now synthesized and described over ve million chemical compounds and chemical industry produces about hundred and fty million tons of synthetic chemicals annually We ship billions of tons of oil per year and through mining operations and other geophysical modifications large quantities of inorganic and organic materials are released from their natural deposits Cities and metropolitan areas of up to 15 million inhabitants produce large quantities of waste in relatively small and confined areas Much of the chemical products and waste products of modern society are released into the environment either during production storage transport use or ultimate disposal These released materials participate in natural cycles and reactions and frequently lead to interference and disturbance of natural systems **Practical Handbook of Soil, Vadose Zone, and Ground-Water Contamination** J.
