Reading Comprehension Education in Fifteen Countries Alan C. Purves, Robert Ladd Thorndike, 1973 Reading Comprehension Education in Fifteen Countries Robert L. Thorndike, 1973 *Reading Comprehension Difficulties* Cesare Cornoldi, Jane V. Oakhill, 2013-04-03

Recognizing the characteristics of children with learning disabilities and deciding how to help them is a problem faced by schools all over the world. Although some disorders are fairly easily recognizable e.g. mental retardation or very specific to single components of performance and quite rare e.g. developmental dyscalculia, schools must consider much larger populations of children with learning difficulties who cannot always be readily classified. These children present high level learning difficulties that affect their performance on a variety of school tasks but the underlying problem is often their difficulty in understanding written text. In many instances despite good intellectual abilities and a superficial ability to cope with written texts and to use language appropriately, some children do not seem to grasp the most important elements or cannot find the pieces of information they are looking for. Sometimes these difficulties are not immediately detected by the teacher in the early school years. They may be hidden because the most obvious early indicators of reading progress in the teacher's eyes do not involve comprehension of written texts or because the first texts a child encounters are quite simple and reflect only the difficulty level of the oral messages: sentences, short stories etc. with which the child is already familiar. However, as years go by and texts get more complex, comprehension difficulties will become increasingly apparent and increasingly detrimental to effective school learning. In turn, studying, assimilating new information and many other situations requiring text comprehension, from problem solving to reasoning with linguistic contents, could be affected. Problems with decoding, dyslexia and language disorders have attracted more interest from researchers than have specific comprehension problems and have occupied more room in specialized journals. Normal reading comprehension has also been a favorite with researchers. However, scarce interest has been paid to subjects who have comprehension difficulties. This book is an attempt to remedy this situation. In so doing, this volume answers the following questions: Does a reading comprehension problem exist in schools? How important and widespread is the problem? Is the problem specific? How can a reading comprehension difficulty be defined and identified? Does the syndrome have a single pattern or can different subtypes be identified? What are the main characteristics associated with a reading comprehension difficulty? When can other well identified problems add to our understanding of reading comprehension difficulties? Which educational strategies are effective in preventing and treating reading comprehension difficulties? What supplementary information can we get from an international perspective?

Hirsch, Jr., 1988-04-12 A must read for parents and teachers this major bestseller reveals how cultural literacy is the hidden key to effective education and presents 5000 facts that every literate American should know In this forceful manifesto Professor E D Hirsch Jr argues that children in the United States are being deprived of the basic knowledge that would enable them to function in contemporary society They lack cultural literacy a grasp of background information that writers and speakers assume their audience already has Even if a student has a basic competence in the English language he or she has little chance of entering the American mainstream without knowing what a silicon chip is or when the Civil War was fought An important work that has engendered a nationwide debate on our educational standards Cultural Literacy is a required reading for anyone concerned with our future as a literate nation

Alternative Approaches to the Assessment of Achievement David L. McArthur, 2012-12-06 Ingrained for many years in the science of educational assessment were a large number of truths about how to make sense out of testing results artful wisdoms that appear to have held away largely by force of habit alone Practitioners and

researchers only occasionally agreed about how tests should be designed and were even further apart when they came to interpreting test responses by any means other than categorically right or wrong Even the best innovations were painfully slow to be incorporated into practice The traditional approach to testing was developed to accomplish only two tasks to provide ranking of students or to select relatively small proportions of students for special treatment In these tasks it was fairly effective but it is increasingly seen as inadequate for the broader spectrum of issues that educational measurement is now called upon to address Today the range of questions being asked of educational test data is itself growing by leaps and bounds Fortunately to meet this challenge we have available a wide panoply of resource tools for assessment which deserve serious attention Many of them have exceptionally sophisticated mathematical foundations and succeed well where older and less versatile techniques fail dismally Yet no single new tool can conceivably cover the entire arena
