Handbook of Reading Disability Research Anne

McGill-Franzen,Richard Allington,2010-09-17 Bringing together a wide range of research on reading disabilities this comprehensive Handbook extends current discussion and thinking beyond a narrowly defined psychometric perspective Emphasizing that learning to read proficiently is a long term developmental process involving many interventions of various kinds all keyed to individual developmental needs it addresses traditional questions What is the nature or causes of reading disabilities How are reading disabilities assessed How should reading disabilities be remediated To what extent is remediation possible but from multiple or alternative perspectives Taking incursions into the broader research literature represented by linguistic and anthropological paradigms as well as psychological and educational research the volume is on the front line in exploring the relation of reading disability to learning and language to poverty and prejudice and to instruction and schooling The editors and authors are distinguished scholars with extensive research experience and publication records and numerous honors and awards from professional organizations representing the range of disciplines in the field of reading disabilities Throughout their contributions are contextualized within the framework of educators struggling to develop concrete instructional practices that meet the learning needs of the lowest achieving readers

Basic Functions of Language, Reading and Reading Disability Evelin Witruk,Angela D. Friederici,Thomas Lachmann,2012-12-06 The present book contains selected contributions from the international conference Basic Mechanisms of Language and Language Disorders This conference was held in Leipzig in September 1999 and was organized by the Department of Psychology at the University of Leipzig in collaboration with the

Max Planck Institute of Cognitive Neuroscience and the Max Planck Institute for Evolutionary Anthropology It was held to commemorate the 120th anniversary of the foundation of the world's first institute of experimental psychology by Wilhelm Wundt in Leipzig This edition examines new results from different fields of psychology and neuro psychology of language reading and reading disability The presented book focuses on the following main topics BASIC FUNCTIONS OF LANGUAGE ACQUISITION AND LANGUAGE COMPREHENSION BASIC FUNCTIONS OF READING BASIC FUNCTIONS OF READING DISABILITY The title Basic Functions of Language Reading and Reading disability expresses the interdisciplinary character of the book It aims not only at bringing together different theoretical approaches but also at connecting these approaches with applied work Since it is necessary to understand basic functions of language and reading in order to understand reading disability the present book strives to foster a scientific exchange and to promote the emergence of synergy effects between the different fields

Off Track Louise Spear-swerling, 2018-03-05 The identification of poor readers as learning disabled can be the first of many steps toward consigning students to a lifetime of reading failure The very label that is meant to help children often becomes a burden that works against effective learning throughout their schooling In this book the authors identify the dangers of labeling children as reading or learning disabled contending that a reading disability is not a unitary phenomenon In order to diagnose and help children educators and parents need to understand the multiple sources of reading difficulty before they can choose appropriate means to correct it Drawing on recent research in cognitive psychology the authors present a new theoretical model of reading disability that integrates a wide variety of findings across age and grade spans Laid out in terms that are readily comprehensible to parents and practitioners the model outlines the phases that are characteristic of the path to proficient reading then describes four ways in which disabled readers may stray from this path The key to the authors work lies in the fact that youngsters who stray from the path of typical reading acquisition often are not distinguishable from other children who are classified as poor readers rather than as learning disabled This model is an especially useful one for practitioners because it both provides a broader view of reading disability than have many previous models and shows how reading disability relates to typical reading acquisition Using illustrative case studies the authors describe the four patterns of reading disability explain how to properly assess them and suggest ways to conquer them

Reading Disabilities R.M. Joshi, C.K.

Leong, 2013-03-11 The present volume is based on the proceedings of the Advanced Study Institute ASI sponsored by the North Atlantic Treaty Organization NATO The Institute was conducted at the beautiful Chateau de Bonas near Toulouse France in October 1991 A number of scholars from different countries participated in the two week institute on differential diagnosis and treatments of reading and writing problems The accepted papers for this volume are divided into three sections a Differential diagnosis of reading disabilities b Access to language related component processes and c Reading spelling strategies The other papers appear in a companion volume Developmental and Acquired Dyslexia

Neuropsychological and Neurolinguistic Perspectives also coedited by Joshi and Leong and published by Kluwer Academic Publishers Several people and organizations have helped us in this endeavor and their assistance is gratefully acknowledged Our special thanks are due to the Scientific Affairs Division of NATO for providing the major portion of the financial support Dr L V da Cunha of NATO and Dr THo Kester and Mrs Barbara Kester of the International Transfer of Science and Technology ITST for their help and support of the various aspects of the institute Mr Charles Stockman and the entire staff of the Chateau de Bonas for making our stay a pleasant one by helping us to run the Institute smoothly We also wish to thank our reviewers and the following people for other assistance Christi Martin and Xi wu Fang

Reading Disabilities B.

Pennington,2012-12-06 This book is unique in that it brings together in one place an account of recent advances in our understanding of the biology of dyslexia It grew out of a Rodin Remediation Foundation International conference held on this topic in Boulder Colorado in 1990 which included most of the world s experts on the genetics and neurology of dyslexia Ten years ago a volume on this topic would scarcely been possible and now we have an emerging comprehensive neuroscientific understanding of this complex behavioral disorder that goes from genes to brain to behavior Building on recent advances in the understanding of the cognitive phenotype of dyslexia these authors present new data on both the etiology and brain mechanisms underlying that phenotype Reading disability or dyslexia has a high familial recurrence rate and is partly heritable Genetic linkage studies are beginning to identify the possible locations of genes influencing this phenotype On the neurological side several independent studies have found neuroanatomical differences in the dyslexic brain which are due to early changes in brain development Thus contrary to the views held by some educators that dyslexia is a myth the results presented in this book firmly establish dyslexia as a real biological condition This book is relevant to researchers and practitioners concerned with both normal and abnormal reading development

The Connections Between Language and Reading Disabilities

Hugh W. Catts,Alan G. Kamhi,2005-01-15 This is an edited book based on papers presented at a 2003 invitee only conference under the sponsorship of the Merrill Advanced Studies Center of the University of Kansas The purpose of the gathering was to discuss theoretical issues and research findi

Visual Processes in Reading and Reading Disabilities

Dale M. Willows,Richard Kruk,Evelyne Corcos,2012-12-06 Over the last 25 years reading processes have been the focus of an enormous amount of research in experimental psychology as well as in other disciplines The theories and models emerging from this research have greatly advanced understanding of both normal acquisition and of reading disabilities Although great progress has been made there are certain aspects that have been relatively neglected in the current understanding Specifically the role of visual factors has received less attention than that of other component processes This is particularly surprising since reading and writing are distinct from the other language processes of speaking and listening in large part by virtue of the fact that a visual dimension is involved Relevant research is broadly scattered both geographically and in terms of disciplines and there have been no major reviews or books concerned with the visual

dimension of reading and reading disabilities The purpose of this book is to bring together a broad range of evidence that concerns the role of visual information in reading and reading disabilities Because reading processes are of central interest to cognitive scientists neuropsychologists psycholinguists clinicians and educators this book should draw a very broad readership

Treating Reading Disabilities Carl Bernard Smith, Barbara Carter, Gloria Dapper, 1972 Neurocognitive Profiling of Children with Specific or Comorbid Reading Disabilities Bartholomeus J.A. de Groot, 2015-03-03 This study concerns the question whether different reading related neurocognitive profiles can be observed for reading proficiency based groups of children who attend the upper levels of Dutch primary education Besides distinguishing between normal to good reading children and children with Reading Disabilities RD subgroups are discerned for two frequently reported comorbidities of RD i e Attention Deficit Hyperactivity Disorder ADHD and Specific Language Impairment SLI The research of this PhD thesis is organized into two empirical sections on different branches of reading related neurocognitive research which are elaborated in five studies The first section focuses on the cognitive processes of phonemic awareness and rapid automatized naming and the first study specifically addresses the question as to how the severity of RD affects the relative importance of these processes Additionally it is investigated how this works out for above average and excellent readers Involving the same processes the second and third study focus on the issue of comorbidity with SLI and ADHD The second section contains the fourth and fifth study which investigate the relatively novel link between word reading and two aspects of visual attention i e selective attention and orienting of attention In the general discussion the employed working model of reading is supplied with empirically based estimates of the neurocognitive effect sizes A main conclusion of the present study is that the addition of visual attention measurements to a phonological reading model provides an enhanced understanding of the cognitive basis of word reading and offers interesting new perspectives on differential diagnostic procedures and treatment planning

The Psychology of Reading and Spelling Disabilities A.F. Jorm, 2017-11-06 Originally published in 1983 recent advances in cognitive psychology had revealed that reading and spelling disabilities may be due to deficits in basic cognitive processes Dr Jorm looks at each type of disability in detail in relation to normality as well as intellectual disability formerly called retardation and finds that the new research provides a useful approach to seemingly intractable problems He covers a broad range of topics including the social context of reading disabilities the role of biological factors remedial teaching and prevention of literacy problems He also gives a forward looking account of how research at the time on the cognitive processes in comprehension might aid our understanding of the relatively neglected group of children who can read individual words yet fail to comprehend adequately Reading disabilities are increasingly serious in a culture which places an ever higher value on literacy and the discoveries of the cognitive psychologists are presented here in a way that will still be accessible to all those teachers and parents who want to know about developments in the past
