Toxic Turmoil Johan M. Havenaar, Julie G. Cwikel, Evelyn J. Bromet, 2012-12-06 When an accident involves many people and when its consequences are many and serious we speak of a disaster Disasters have the same causal factors as accidents they differ from accidents by the gravity of consequences not by causes The action of a single individual may result in thousands of deaths and huge financial losses The metal fatigue of a screw may by a chain of events cause an explosion killing hundreds or lead to a break in a dam and a devastating flood The fact that minor and unpredictable acts can lead to disasters is important because it allows us to predict that the years to come will bring with them more disasters with ever more severe consequences The density of human populations is growing By the year 2025 some four fifths of the world's population will be living in urban settings An explosion or a gas leak in a densely populated area will cause incomparably more damage than a similar event in a rural area Modern technology is immensely powerful and its power is continuing to grow and can be used in a disastrous manner Aggression is just as possible now as it was in the past but the tools of aggression are vastly more dangerous than ever before This book edited by Johan M Havenaar Julie G Cwikel and Evelyn J Bromet is therefore very timely
