Project for powerful wind power plants with vertical axis of rotation Giacinto Libertini,2014-08-16 This work proposes an entirely new type of plants with a vertical axis of rotation and with reduced costs due to the method of construction and to the reduction in materials used In addition the most interesting aspect is the possibility of constructing plants that are much more powerful than those existing at present with a linear increase of the costs power ratio In fact by building plants with an effective power 20 times greater than that of the most powerful current wind power plants built to date about 68 000 plants would be sufficient to meet today s world energy needs satisfied by non renewable sources Furthermore in a future scenario with world population increased to 10 billion and average consumption per capita equal to that of the most industrialized countries but excluding countries with high consumption of energy the overall energy needs would be covered by about 165 000 plants
