Stopping Time Techniques for Analysts and Probabilists L. Egghe, 1984-09-27 This book considers convergence of adapted sequences of real and Banach space valued integrable functions emphasizing the use of stopping time techniques Not only are highly specialized results given but also elementary applications of these results The book starts by discussing the convergence theory of martingales and sub or super martingales with values in a Banach space with or without the Radon Nikodym property Several inequalities which are of use in the study of the convergence of more general adapted sequence such as uniform amarts mils and pramarts are proved and sub and superpramarts are discussed and applied to the convergence of pramarts Most of the results have a strong relationship with or in fact are characterizations of topological or geometrical properties of Banach spaces The book will interest research and graduate students in probability theory functional analysis and measure theory as well as proving a useful textbook for specialized courses on martingale theory

Stochastic and Differential Games Martino Bardi, T.E.S. Raghavan, T. Parthasarathy, 2012-12-06 The theory of two person zero sum differential games started at the beginning of the 1960s with the works of R Isaacs in the United States and L S Pontryagin and his school in the former Soviet Union Isaacs based his work on the Dynamic Programming method He analyzed many special cases of the partial differential equation now called Hamilton Jacobi Isaacs briefly trying to solve them explicitly and synthesizing optimal feedbacks from the solution He began a study of singular surfaces that was continued mainly by J Breakwell and P Bernhard and led to the explicit solution

of some low dimensional but highly nontrivial games a recent survey of this theory can be found in the book by J Lewin entitled *Differential Games* Springer 1994 Since the early stages of the theory several authors worked on making the notion of value of a differential game precise and providing a rigorous derivation of the HJI equation which does not have a classical solution in most cases we mention here the works of W Fleming A Friedman see his book *Differential Games* Wiley 1971 P P Varaiya E Roxin R J Elliott and N J Kalton N N Krasovskii and A I Subbotin see their book *Positional Differential Games* Nauka 1974 and Springer 1988 and L D Berkovitz A major breakthrough was the introduction in the 1980s of two new notions of generalized solution for Hamilton Jacobi equations namely viscosity solutions by M G Crandall and P L

Zero-Sum Discrete-Time Markov Games with Unknown Disturbance Distribution J. Adolfo Minjárez-Sosa, 2020-01-27 This SpringerBrief deals with a class of discrete time zero sum Markov games with Borel state and action spaces and possibly unbounded payoffs under discounted and average criteria whose state process evolves according to a stochastic difference equation The corresponding disturbance process is an observable sequence of independent and identically distributed random variables with unknown distribution for both players Unlike the standard case the game is played over an infinite horizon evolving as follows At each stage once the players have observed the state of the game and before choosing the actions players 1 and 2 implement a statistical estimation process to obtain estimates of the unknown distribution Then independently the players adapt their decisions to such estimators to select their actions and construct their strategies This book presents a systematic analysis on recent developments in this kind of games Specifically the theoretical foundations on the procedures combining statistical estimation and control techniques for the construction of strategies of the players are introduced with illustrative examples In this sense the book is an essential reference for theoretical and applied researchers in the fields of stochastic control and game theory and their applications **CONTROLO 2024** Antonio Pedro Aguiar, Paula
