Software Architecture Patrick Donohoe,2013-06-05

Software architecture is a primary factor in the creation and evolution of virtually all products involving software. It is a topic of major interest in the research community where promising formalisms, processes and technologies are under development. Architecture is also of major interest in industry because it is recognized as a significant leverage point for manipulating such basic development factors as cost, quality and interval. Its importance is attested to by the fact that there are several international workshop series as well as major conference sessions devoted to it. The First Working IFIP Conference on Software Architecture WICSAI provided a focused and dedicated forum for the international software architecture community to unify and coordinate its effort to advance the state of practice and research. WICSA 1 was organized to facilitate information exchange between practising software architects and software architecture researchers. The conference was held in San Antonio, Texas, USA, from February 22nd to February 24th, 1999. It was the initiating event for the new IFIP TC 2 Working Group on Software Architecture. This proceedings document contains the papers accepted for the conference. The papers in this volume comprise both experience reports and technical papers. The proceedings reflect the structure of the conference and are divided into six sections corresponding to the working groups established for the conference.

Internet GIS Zhong-Ren Peng, Ming-Hsiang Tsou, 2003-03-31. Provides case studies in each chapter illustrating how principles work in practice. Compares strengths and weaknesses of off the shelf software packages. Database and Expert Systems Applications Heinrich C. Mayr, Jiri Lazansky, Gerald Quirchmayr, Pavel Vogel, 2003-06-29. The 12th International Conference on Database and Expert Systems Applications was held on September 3-5, 2001, at the Technical University of Munich, Germany. The rapidly growing spectrum of database applications has led to the establishment of more specialized discussion platforms: DaWaK conference, EC Web conference and DEXA workshop, which were all held in parallel with the DEXA conference in Munich. In your hands are the results of much effort beginning with the preparation of the submitted papers. The papers then passed through the reviewing process and the accepted papers were revised to final versions by their authors and arranged with the conference program. All this culminated in the conference itself. A total of 175 papers were submitted to this conference and I would like to thank all the authors. They are the real base of the conference. The program committee and the supporting reviewers produced altogether 497 referee reports on average of 2.84 reports per paper and selected 93 papers for presentation. Comparing the weight or more precisely the number of papers devoted to particular topics at several recent DEXA conferences, an increase can be recognized in the areas of XML, databases, active databases and multi and hypermedia efforts. The space devoted to the more classical topics such as information retrieval, distribution and Web aspects and transaction indexing and query aspects has remained more or less unchanged. Some decrease is visible for object orientation. *Internet-enabled Business Intelligence* William A. Giovinazzo, 2003. William Giovinazzo gives experienced database professionals practical guidance for every aspect of planning and deploying Web based data warehouses and leveraging them for competitive advantage. Unlike previous books, *The Web Enabled Data*

Warehouse covers all the enabling technologies and analysis approaches you need to know about from XML to CRM Java to customer profiling Giovinazzo begins by introducing the compelling advantages of integrating business intelligence and data warehouses with Web technology He reviews the business and technical contexts in which the Web enabled data warehouse will operate shows how to build and optimize data warehouse infrastructure and presents in depth coverage of key enabling technologies including Java XML and XSL LDAP directories and WAP wireless development environments In the book s final section Giovinazzo introduces and explains powerful new analysis techniques that can dramatically improve your understanding of customers and shows how to integrate data warehouses with CRM and other enterprise systems so you can act on your knowledge far more quickly and efficiently For every experienced database professional seeking to understand or deploy Web based data warehouses
