quite widespread often nourished by personal experiences or the persuasive testimonies of others Trusting Science embarks on a journey to uncover some underexplored causes of science distrust It thus underscores the necessity of demystifying science by illuminating the nature of scientific evidence the inevitable presence of uncertainty the indispensable role of expertise and the subtle sway of personal biases Drawing on historical examples from vaccination and other life sciences Trusting Science offers opportunities for reflection about how science is done and argues that a renaissance in science education and communication is crucial for cultivating realistic expectations and rebuilding public trust in science *The Panic Virus* Seth Mnookin,2012-01-03 A searing account of how vaccine opponents have used the media to spread their message of panic despite no scientific evidence to support them **New Technologies in Health Care A.**

Meanings of Pain Simon van Rysewyk, 2017-02-07 Although pain is widely recognized by clinicians and researchers as an experience pain is always felt in a patient specific way rather than experienced for what it objectively is making perceived meaning important in the study of pain The book contributors explain why meaning is important in the way that pain is felt and promote the integration of quantitative and qualitative methods to study meanings of pain For the first time in a book the study of the meanings of pain is given the attention it deserves All pain research and medicine inevitably have to negotiate how pain is perceived how meanings of pain can be described within the fabric of a person's life and neurophysiology what factors mediate them how they interact and change over time and how the relationship between patient researcher and clinician might be understood in terms of meaning Though meanings of pain are not intensively studied in contemporary pain research or thoroughly described as part of clinical assessment no pain researcher or clinician can avoid asking questions about how pain is perceived or the types of data and scientific methods relevant in discovering the answers **A doctor's order. conventional clinical medicine and the epidemic of energy loss has created confusion and all too often absurdities Isager attempts a thorough analysis of this situation and its historical and ideological roots emphasising epistemological problems problems concerned with how we know and how or why we do not know [Autism's False Prophets](#) Paul A.
