[Risk and Securitization in Japan](#)

Piers R. Williamson, 2013-11-26 Since the early 1990s there has been an emphasis in international relations theory on the shift from a Cold War rationality of threat to a post Cold War rationality of risk. However, in *Risk and Securitization in Japan 1945-1960*, Piers R. Williamson argues that this assumption of a shift in rationality stems from a fundamental failure to distinguish between the concepts of threat and risk. By clarifying the concepts of threat and risk, this book challenges the prevailing hypothesis of a shift from threat to risk with the end of the Cold War and, in doing so, presents a new explanatory model of risk that can be applied to Japan and elsewhere. In turn, it proposes that a full comprehension of the concept of risk can generate new understandings of political processes that would otherwise remain obscured. Williamson demonstrates how this can be done, proffering a new perspective on Japanese security discourse, especially the controversy between, on the one hand, early Japanese governments, prime ministers, Diet members, and those Japanese who drafted the Japanese proposal for the new constitution, and on the other hand, intellectuals, peace movement activists, proponents of unarmed neutrality, and the US-Japan security treaty. Including extensive archival material in the form of speeches, public statements, and government documents, this book will be of huge interest to students and scholars of Japanese politics, international relations, and history alike.

Insurance Risk Management and Reinsurance Guillaume Gorge, 2016 Risk, being its raw material, insurance has developed various techniques of valuation and risk transfer. Nowadays, these techniques, and first of all, reinsurance, the favourite way of transferring risk, are entirely reassessed, considering the development of Corporate Finance theory. Therefore, the approach retained here, originally for the actuarial course at ENSAE Paris, may surprise some readers and students, as it proposes an extended view of risk. We cover not only the mathematical aspects of Risk Management but also other fields relevant for Risk Management from economy or finance. We aim here at making bridges between all these fields through practical application to cat and life risk management.

Recent Innovations in Securitization United States Congress, House, Committee on Financial Services, Subcommittee on Capital Markets, Insurance, and Government Sponsored Enterprises, 2010 **Financial and Insurance Formulas** Tomas Cipra, 2010-07-16 Financial and insurance calculations become more and more frequent and helpful for many users, not only in their professional life but sometimes even

in their personal life Therefore a survey of formulas of nancial and insurance mathematics that can be applied to such calculations seems to be a suitable aid In some cases one should use instead of the term formula more suitable terms of the type method p cedure or algorithm since the corresponding calculations cannot be simply summed up to a single expression and a verbal description without introducing complicated symbols is more appropriate The survey has the following ambitions The formulas should be applicable in practice it has motivated their choice for this survey rst and foremost On the other hand it is obvious that by time one puts to use in practice seemingly very abstract formulas of higher mathematics e g when pricing nancial derivatives evaluating nancial risks applying accou ing principles based on fair values choosing alternative risk transfers ARL in insurance and the like The formulas should be error free though such a goal is not achievable in full since in the nancial and insurance framework one publishes sometimes in a h tic way various untried formulas and methods that may be incorrect Of course the formulas are introduced here without proofs because their derivation is not the task of this survey
