**Can that be Right?** A. Franklin, 2012-12-06 In this collection of essays Allan Franklin defends the view that science provides us with knowledge about the world which is based on experimental evidence and on reasoned and critical discussion In short he argues that science is a reasonable enterprise He begins with detailed studies of four episodes from the history of modern physics 1 the early attempts to detect gravity waves 2 how the physics community decided that a proposed new elementary particle 17 keV neutrino did not exist 3 a sequence of experiments on K meson decay and 4 the origins of the Fifth Force hypothesis a proposed modification of Newton's Law of Universal Gravitation The case studies are then used to examine issues such as how discord between experimental results is resolved calibration of an experimental apparatus and its legitimate use in validating an experimental result and how experimental results provide reasonable grounds for belief in both the truth of physical theories and in the existence of the entities involved in those theories This book is a challenge to the critics of science both postmodern and constructivist to provide convincing alternative explanations of the episodes and issues discussed It should be of interest to philosophers historians and sociologists of science and to scientists themselves

*Property Versatility and Copredication*

David Liebesman, Ofra Magidor, 2025-05-05 Nearly all properties are to a certain extent versatile there are many different ways to instantiate them Consider a light blue scarf and a dark blue gemstone They share the property of being blue despite being different kinds of objects and differing in the way in which they are blue The key insight explored in this book is that this apparently mundane observation should be extended many properties are considerably more versatile than theorists typically take them to be This insight turns out to be incredibly powerful in addressing a wide range of issues in the philosophy of language metaphysics and beyond One such issue is the problem of copredication Copredication sentences such as Lunch was delicious but took hours are common yet puzzling These sentences can be true despite seemingly ascribing incompatible properties it appears that only the food eaten can be delicious and only the event attended can take hours This book offers a comprehensive discussion of the problem of copredication including a critical evaluation of extant approaches to the problem and culminating with a defence of the Property Versatility approach to copredication In addition the book demonstrates how Property Versatility is a powerful tool in addressing a wide range of issues beyond copredication including the semantics of generics the metaphysics of establishments and repeatable artworks fictional discourse and the nature of ambiguity as well as a host of others
