Seed Fate Predation Dispersal And Seedling Establishment:

Seed Fate J. E. Lambert, P. E. Hulme, S. B. Vander Wall, 2005 This book presents current knowledge of seed fate in both natural and human disturbed landscapes from various regions of the world Habitats considered range from mountain and arid deserts in the temperate zone to savanna and lowland rainforests in tropical regions of the world Particular attention is paid to plant diversity conservation when seed removal is affected by factors such as hunting habitat fragmentation or intensive logging Contributors include leading scientists involved in research on seed ecology and on animal plant relationships from the perspective of both primary and secondary seed dispersal and predation

Seed Fate: Predation, Dispersal and Seedling Establishment Pierre-Michel Forget, 2005 This book presents current knowledge of seed fate in both natural and human disturbed landscapes from various regions of the world Habitats considered range from mountains and arid deserts in the temperate zone to savannas and lowland rain forests in tropical regions Particular attention is paid to plant diversity conservation when seed removal is affected by factors such as hunting habitat fragmentation or intensive logging

Seed Dispersal Andrew J. Dennis, R.J. Green, E.W. Schupp, 2007 Fresh concepts in the study of seed dispersal are spurring a host of exciting new questions new answers to old questions new methods and approaches and a reinvigoration of the field Seed Dispersal Theory and its Application in a Changing World presents both recent advances and reviews of current knowledge demonstrating the vigour and vibrancy of the field It provides new perspectives and directions at a time when efforts to meet growing environmental challenges threatening natural systems are of utmost importance

Hardwood Reforestation and Restoration Daniel Gagnon, Benoit Truax, 2019-04-25 Hardwood dominated temperate forests mostly in Eastern North America Europe North East Asia provide valuable renewable timber and numerous ecosystem services Many of these forests have been subjected to harvesting or conversion to agriculture sometimes over centuries that have greatly reduced their former extent and diversity Natural regeneration following harvesting or during post agricultural succession has often failed to restore these forests adequately Past harvesting practices and the valuable timber of some species have led to a reduction in their abundance The loss of apex predators has caused herbivore populations to increase and exert intense browsing pressure on hardwood regeneration often preventing it Particularly important are fruit nut and acorn bearing species because of their vital role in forest food webs and biodiversity Restoring hardwood species to natural forests in which they were formerly more abundant will require a number of forest management actions e g resistant hybrids deer exclosures protectors enrichment planting underplanting etc Similarly reforesting areas that were once natural forests will also require new silvicultural knowledge Global warming trends will intensify the need for interventions to maintain the diversity and function of temperate hardwood forests as well as for increase hardwood reforestation

Field and Laboratory Methods in Primatology Joanna M. Setchell, Deborah J. Curtis, 2011-02-03 Building on the success of the first edition and bringing together contributions from a range of experts in the field the second edition of this guide to research on wild

primates covers the latest advances in the field including new information on field experiments and measuring behaviour It provides essential information and advice on the technical and practical aspects of both field and laboratory methods covering topics such as ethnoprimateology remote sensing GPS and radio tracking trapping and handling dietary ecology and non invasive genetics and endocrinology This integrated approach opens up new opportunities to study the behavioural ecology of some of the most endangered primates and to collect information on previously studied populations Chapters include methodological techniques instructions on collecting processing and preserving samples data for later analysis ethical considerations comparative costs and further reading making this an invaluable tool for postgraduate students and researchers in primatology behavioural ecology and zoology

Oak Seed Dispersal Michael A. Steele, 2021-01-05 The definitive examination of oak forest evolutionary ecology Seed dispersal is a critical stage in the life cycle of most flowering plants The process can have far reaching effects on a species biology especially numerous aspects of its ecology and evolution This is particularly the case for the oaks in which the dispersal of the acorn is tied to numerous tree characteristics as well as the behavior and ecology of the animals that feed on and move these seeds to their final destination Forest structure composition and genetics often follow directly from the dispersal process while also influencing it in turn In *Oak Seed Dispersal* Michael A Steele draws on three decades of field research across the globe e g the United States Mexico Central America Europe and China to describe the interactions between oaks and their seed consumers Rodents birds and insects he writes collectively influence the survival movement and germination of acorns as well as the establishment of seedlings often indicating a coevolutionary bond between oaks and their seed consumers This bond can only be understood by unraveling the complex interactions that occur in the context of factors such as partial seed consumption due to acorn chemistry scatterhoarding predation of the seed consumers by other organisms and the limiting effects of masting on insect rodent and jay damage Offering new insights on how animal mediated dispersal drives ecological and evolutionary processes in forest ecosystems *Oak Seed Dispersal* also includes an overview of threatened oak forests across the globe and explains how a lack of acorn dispersal contributes to many important conservation challenges Highly illustrated the book includes photographs of key dispersal organisms and tactics as well as a foreword by Stephen B Vander Wall a leading authority on food hoarding and animal mediated seed dispersal and beautiful artwork by Tad C Theimer also an accomplished ecologist

Seedling Ecology and Evolution Mary Allestree Leck, V. Thomas Parker, Robert L. Simpson, 2008-09-18 Seedlings are highly sensitive to their environment After seeds they typically suffer the highest mortality of any life history stage This book provides a comprehensive exploration of the seedling stage of the plant life cycle It considers the importance of seedlings in plant communities environmental factors with special impact on seedlings the morphological and physiological diversity of seedlings including mycorrhizae the relationship of the seedling with other life stages seedling evolution and seedlings in human altered ecosystems including deserts tropical rainforests and habitat restoration projects The diversity of seedlings is

portrayed by including specialised groups like orchids bromeliads and parasitic and carnivorous plants Discussions of physiology morphology evolution and ecology are brought together to focus on how and why seedlings are successful This important text sets the stage for future research and is valuable to graduate students and researchers in plant ecology botany agriculture and conservation *Restoration of Boreal and Temperate Forests* John A. Stanturf, 2015-08-14 This substantially updated new edition reflects the growing recognition that large areas of forests are degraded globally This edition describes forest restoration in the context of rapid social economic environmental and climate change Covering the last decade s significant advances in forest restoration concepts and practice this edition has 16 new chapters and 19 thoroughly revised chapters This book is an excellent source of information for researchers managers policymakers and graduate students in forestry and ecology **Amazon Fruits: An Ethnobotanical Journey** Nigel Smith, 2023-09-26 This is the first comprehensive listing of Amazon fruits from an ethnobotanical perspective This detailed book covers 50 botanical families 207 species in the Amazon including how the people of each region use them It is lavishly illustrated with high quality photographs taken by the author an extensive list of references and Dr Smith s latest meticulous research This book should be a foundational work for scholars working in the plant sciences researchers in ethnobotanical studies and general interest scholars seeking more detailed information on the latest research by a leading scientist in the Amazon **Forest Ecology and Conservation** Adrian Newton, 2007-05-17 Forest conservation has become one of the most important environmental issues currently facing humanity as a result of widespread deforestation and forest degradation Pressures on remaining natural forests continue to intensify leading to high rates of biodiversity loss Understanding how human activities influence ecological processes within forests is essential for developing effective conservation action This book describes research methods and techniques relevant to understanding forest ecology with a particular focus on those that are relevant to practical conservation and sustainable forest management This information is currently disparate and difficult to locate and as with other books in this series the intention is to provide a comprehensive synthesis for use by graduate students researchers and practising conservationists Methods are presented for assessing forest extent and condition structure and composition and forest dynamics at a variety of scales Techniques for assessing genetic variation and reproductive ecology and for evaluating the habitat value of forests are also described Particular emphasis is given to state of the art techniques such as remote sensing GIS computer modelling and molecular markers However traditional methods of forest mensuration and ecological survey are also presented The methods and techniques described are generally applicable to all forest types including both temperate and tropical forest ecosystems *Fynbos* Nicky Allsopp, Jonathan F. Colville, G. Anthony Verboom, 2014-09-18 South Africa s fynbos region has intrigued biologists for centuries It has achieved iconic status as a locus of megadiversity and therefore a place to study the ecological underpinnings of massive evolutionary radiations Researchers have made great advances over the past two decades in unravelling the complexities of fynbos ecology and

evolution and the region has contributed significant insights into the adaptive radiations of large lineages conservation science pollination biology invasive plant biology and palaeoanthropology Lessons from the fynbos offer much of value for understanding the origin maintenance and conservation of diversity anywhere in the world This book provides the first synthesis of the field for 20 years bringing together the latest ecological and evolutionary research on the South African global biodiversity hotspots of the Greater Cape Floristic Region the iconic fynbos and succulent karoo It explores the historical and modern physical and biological environment of this region the circumstances and processes which have fostered its remarkable biodiversity and the role this diversity has played in the emergence of modern humans It also discusses the challenges of contemporary management and conservation of the region s biodiversity in the face of accelerating global change

landscapes of large grazing herbivores in Europe and the implications of the past in shaping our environment today and in the future Debates on the types of anciently grazed landscapes in Europe and what they tell us about past and present ecology have been especially topical and controversial recently This treatment brings the current discussions and the latest research to a much wider audience The book breaks new ground in broadening the scope of wood pasture and woodland research to address sites and ecologies that have previously been overlooked but which hold potential keys to understanding landscape dynamics Eminent contributors including Oliver Rackham and Frans Vera present a text which addresses the importance of history in understanding the past landscape and the relevance of historical ecology and landscape studies in providing a future vision

The Ecology of Large Herbivores in South and Southeast Asia Farshid Ahrestani, Mahesh Sankaran, 2016-04-02 Large terrestrial mammalian herbivores play critical roles in ecosystems by acting as regulators of energy and nutrient cycles modulators of plant community composition and grassland woodland transitions agents of seed dispersal and as prey for large carnivores Though large herbivores represent a prominent component of mammalian assemblages throughout South and Southeast Asia little is known about their roles in ecosystems in the region This volume presents for the first time a collection of studies on the ecology of the rich and diverse large herbivore assemblages of South and Southeast Asia Prepared by experts on herbivores of the region it covers a comprehensive range of topics including their evolutionary history behavioural nutritional and population ecology patterns of diversity across environmental gradients roles as seed dispersers and regulators of plant growth community compositions and their conservation in the face of hunting and global change

The Ecology of Tropical East Asia Richard T. Corlett, 2014-08-21 Tropical East Asia is home to over one billion people and faces massive human impacts from its rising population and rapid economic growth It has already lost more than two thirds of its forest cover and has the highest rates of deforestation and logging in the tropics Hunting coupled with the relentless trade in wildlife products threatens all its large and many of its smaller vertebrates Despite these problems the region still supports an estimated 15-25% of global terrestrial biodiversity and is therefore a key area for conservation Effective conservation action depends on a clear understanding of the ecological patterns and processes in the region The first edition of The Ecology of Tropical East Asia was the first book to describe the terrestrial ecology of the entire East Asian tropics and subtropics from southern China to western Indonesia This second edition updates the contents and extends the coverage to include the very similar ecosystems of northeast India and Bhutan The book deals with plants animals and the ecosystems they inhabit as well as the diverse threats to their survival and the options for conservation It provides the background knowledge of the region's ecology needed by both specialists and non specialists to put their own work into a broader context The accessible style comprehensive coverage and engaging illustrations make this advanced textbook an essential read for senior undergraduate and graduate level students studying the terrestrial ecology of the East Asian tropics as well as an authoritative reference for professional ecologists conservationists and interested amateurs

worldwide Bushmeat harvest in tropical forests Varun Swamy,Miguel Pinedo-Vasquez,2014-10-07 Food security is increasingly becoming a priority for tropical countries This has led to reconsideration of the need to find systems and practices of sustainable harvest consumption and trade of bushmeat and other wildlife products This paper provides a synthesis of information found in the expanding global literature on the many dimensions and functions of game species bushmeat and other game resources Much research effort has focused on documenting and measuring the impact of bushmeat harvesting on populations of targeted game species This has resulted in an emphasis of conservation effort on the protection of game species and the criminalization of hunting bushmeat trade and consumption Despite decades of official bans on bushmeat trade and consumption some socioeconomic studies have shown that bushmeat is often the main source of protein and income for low income urban and rural families in some tropical countries Similarly the role of large and small bodied game species in the sustainable provision of seed dispersion and other ecosystem services are underlined by some ecological and conservation biology studies A great diversity of complex management systems of game species in forests and on agriculture land are reported by some ethnographic studies The encouraging results from some bushmeat studies are an incentives to conduct evidence based studies that can generate knowledge and information that can help policy makers to make informed decisions **Ecology and Conservation of Tropical Ungulates in Latin America** Sonia

Gallina-Tessaro,2019-11-20 This book brings together the latest information on tropical ungulates in different Latin American countries These animals are not only important from the point of view of their role in different ecosystems but also have cultural value for people The book also discusses topics such as habitat transformation and hunting as these species are an important source of food in many places Addressing ungulate natural communities in diverse ecosystems and countries the book provides information on specific aspects of each of the most representative species and highlights topics to help readers better understand these species and develop effective management and conservation strategies The information presented also reveals the need for more knowledge and will hopefully provide the incentive for continued studies on this important group of animals This publication serves as a reference for academic research on ungulate ecology behavior and dynamics as well as the basis for conservation strategies
