This edited book focuses on highlighting the evolution of Indian agriculture over the past 75 years of independence, covering every sector viz. crop science, horticulture, management of biotic/abiotic stress, post-harvest quality management, livestock, fisheries, mechanization, marketing, and human resource development. The book has 30 chapters from most experienced researchers and academicians who are actively engaged in research work on the subject area of the book. The book is in line with the strategy for New India 75 brought out by NITI Aayog. It highlights India's success stories in innovation, technology, enterprise, and efficient management together to achieve overall growth while making available food, required nutrition, and others ecological services. It also assesses the India's preparedness in terms of commitment toward sustainable development goal SDG. The book is a relevant reading material for both students and researchers and policy makers.

Seeds Carolyn Fry, 2016-04-05

From the magnificence of a towering redwood to the simple elegance of a tiny dandelion seed, bearing plants abound on planet Earth. The sheer diversity of plants thriving today is largely thanks to the evolution of the seed, as this made plants resilient to environmental changes by enabling them to await optimum conditions for growth before springing to life. In a time of declining biodiversity, studying seeds is now helping scientists preserve this plant diversity for future generations. With *Seeds*, Carolyn Fry offers a celebration of these vital but unassuming packages of life. She begins with a sweeping tour through human history designed to help us understand why we should appreciate and respect these floral parcels. Wheat, corn, and rice, she reminds us, supply the foundations of meals eaten by people around the world. Countless medicines, oils, clothing materials, and building supplies are available only because of the versatility and variety of seed-bearing plants. Fry then provides a comprehensive history of the evolution of seeds, explaining the myriad ways that they have adapted, survived, and thrived across the globe. Delving deeper into the science of seeds, she reveals the fascinating processes of dormancy, reproduction, germination, and dispersal, and showcases the estimable work conservationists are doing today to gather and bank seeds in order to prevent species from going extinct. Enriched by a stunning array of full-color images, *Seeds* offers a comprehensive exploration of some of the most enduring and
