Trading in Genes Ricardo Melendez-Ortiz, 2013 Few scientific developments have given rise to as much controversy as biotechnology Numerous groups are united in their opposition expressing concern over environmental and health risks impacts on rural livelihoods the economic dominance of multinational companies and the ethical implications of crossing species boundaries Among the supporters of the technology are those that believe in its potential to enhance food security further economic development increase productivity and reduce environmental pressures As a result countries and sectors within countries find themselves at odds with each other while potential opportunities for development offered by the use of biotechnology are seized or missed and related risks go unmanaged This book a unique interdisciplinary collection of perspectives from the developing world examines the ongoing debate Writing for the International Centre for Trade and Sustainable Development leading experts address issues such as diffusion of technology intellectual property rights the Cartagena Protocol impacts of international trade capacity building and biotechnology research and regulation With the most recent and relevant examples from around the world *Trading in Genes* offers the reader a single volume overview of the connections between biotechnology trade and sustainability that is both wide ranging and thorough

Saving Seeds Bonwoo Koo, Philip G. Pardey, Brian Wright, 2003-12-01 The conservation of genetic resources is vital to the maintenance of biodiversity and to the world s ability to feed its growing population There are now more than a thousand genebanks worldwide involved in the ex situ meaning away from the source storage of particular classes of crops Since the

1970s the eleven genebanks maintained by the centres of the Consultative Group on International Agricultural Research CGIAR have become pivotal to the global conservation effort However key policy and management issues usually with economic dimensions have largely been overlooked This provided the impetus for a series of detailed economic studies led by IFPRI in collaboration with five CGIAR centres CIAT based in Colombia CIMMYT Mexico ICARDA Syria ICRISAT India and IRRI Philippines This book reports these studies and discusses their wider implications

Environmental Decision-Making in Context Chad J. McGuire, 2017-09-25 Because of the complexity involved

in understanding the environment the choices made about environmental issues are often incomplete In a perfect world those who make environmental decisions would be armed with a foundation about the broad range of issues at stake when making such decisions Offering a simple but comprehensive understanding of the critical roles science economics and values play in making informed environmental decisions Environmental Decision Making in Context A Toolbox provides that foundation The author highlights a primary set of intellectual tools from different disciplines and places them into an environmental context through the use of case study examples The case studies are designed to stimulate the analytical reasoning required to employ environmental decision making and ultimately help in establishing a framework for pursuing and solving environmental questions issues and problems They create a framework individuals from various backgrounds can use to both identify and analyze environmental issues in the context of everyday environmental problems The book strikes a balance between being a tightly bound academic text and a loosely defined set of principles It takes you beyond the traditional pillars of academic discipline to supply an understanding of the fundamental aspects of what is actually involved in making environmental decisions and building a set of skills for making those decisions **Growing Plantation Forests**

Phil West,2006-08-02 In a highly readable fashion this book describes the scientific principles which are used throughout the world to ensure rapid healthy plantation growth It is written for a world wide audience from forestry professionals and scientists through to small plantation growers to describe how plantations may be grown responsibly and profitably The author has been a forest scientist for over 30 years **Bioscience Entrepreneurship In Asia: Creating Value With**

Biology Paul S Teng,2008-07-29 When matched with Asian mega trends in culture demographics and economics BioScience products provide huge potential for exploitation and value creation in the coming years This potential will be further enhanced by the declining capacity of the world s oil reserves to provide hydrocarbons for fuel and materials and plants will become more important as bio factories for basic ingredients to sustain human societies Successful business models have been developed to harness the potential of BioScience to meet the demands for food feed and organochemicals based on value creation and value capture mechanisms These mechanisms are described in the book with real world case studies As BioScience applications become more basic in nature product development has increased in its complexity and requires special attention to obtain freedom to operate Controversy about novel gene technologies threatens to derail the BioScience Revolution as public concern about safety issues and bioethics are fuelled by opposition groups to the new biology This book describes communication techniques and messages to address such concerns and shows how early education programs can have high payoffs for companies that invest in novel products **Growing Plantation Forests** P. W. West,2013-10-21 This

book describes the scientific principles that are used throughout the world to ensure the rapid healthy growth of forest plantations As the population of the world increases so does the amount of wood people use Large areas of natural forests are being cleared every year and converted to other uses Almost as large an area of plantation forests is being established

annually to replace those lost natural forests Eventually plantations will produce a large proportion of the wood used around the world for firewood building the manufacture of paper and bioenergy Forest plantations can also provide various environmental benefits including carbon storage rehabilitation of degraded land serving as disposal sites for various forms of industrial or agricultural waste and enhancing biodiversity in regions that have been largely cleared for agriculture Whatever their motivation plantation forest growers want their plantations to be healthy and grow rapidly to achieve their purpose as soon as possible This book discusses how this is done It is written for a worldwide audience from forestry professionals and scientists through to small plantation growers and describes how plantations may be grown responsibly and profitably
