Seeing Reason Keith Stenning, 2002 This title includes the following features A new volume in the renowned Oxford Cognitive Science Series Presents important new findings on human reasoning and reasoning skills Explores the relationship between cognitive and social aspects of communication and reasoning Truly interdisciplinary accessible to both psychologists and philosophers

Thinking in Images Piotr Kozak, 2023-04-20 What does it mean to think with images There is a well established tradition of studying thought processes through the nature of language and we know much more about thinking with language than about thinking with images Piotr Kozak takes an important step towards rectifying this position Presenting a unified theory of different types of images such as diagrams maps technical drawings and photographs Kozak argues that images provide a genuine and autonomous form of content and knowledge In contrast to the propositional view of thinking and resemblance based accounts he puts forward a measurement theoretic account of images as operations that exemplify measures revealing the outcomes of measurement operations performed on a depicted situation Bringing together insights from philosophy of science picture theory cognitive science and cognitive psychology this book demonstrates that we can only understand what an image is if we truly understand the role they play in our thought processes challenging the prevailing view that the utility of images is only instrumental and cognitively inferior

Financial Analysis and Risk Management Victoria Lemieux, 2012-10-20 The Global Financial Crisis and the Eurozone crisis that has followed have drawn attention to weaknesses in financial records information and data These weaknesses have led to operational risks in financial institutions flawed bankruptcy and foreclosure proceedings following the Crisis and inadequacies in financial supervisors access to records and information for the purposes of a prudential response Research is needed to identify the practices that will provide the records information and data needed to support more effective financial analysis and risk management The unique contribution of this volume is in bringing together researchers in distinct domains that seldom interact to identify theoretical technological policy and practical issues related to the management of financial records information and data The book will therefore appeal to researchers or advanced practitioners in the field of finance and those with an interest in risk management computer science cognitive science sociology management information systems information science and archival science as applied to the financial domain

Creating Scientific Concepts Nancy J Nersessian, 2010-08-13 An account that analyzes the dynamic reasoning processes implicated in a fundamental problem of creativity in science how does genuine novelty emerge from existing representations How do novel scientific concepts arise In *Creating Scientific Concepts* Nancy Nersessian seeks to answer this central but virtually unasked question in the problem of conceptual change She argues that the popular image of novel concepts and profound insight bursting forth in a blinding flash of inspiration is mistaken Instead novel concepts are shown to arise out of the interplay of three factors an attempt to solve specific problems the use of conceptual analytical and material resources provided by the cognitive social cultural context of the problem and

dynamic processes of reasoning that extend ordinary cognition Focusing on the third factor Nersessian draws on cognitive science research and historical accounts of scientific practices to show how scientific and ordinary cognition lie on a continuum and how problem solving practices in one illuminate practices in the other Her investigations of scientific practices show conceptual change as deriving from the use of analogies imagistic representations and thought experiments integrated with experimental investigations and mathematical analyses She presents a view of constructed models as hybrid objects serving as intermediaries between targets and analogical sources in bootstrapping processes Extending these results she argues that these complex cognitive operations and structures are not mere aids to discovery but that together they constitute a powerful form of reasoning model based reasoning that generates novelty This new approach to mental modeling and analogy together with Nersessian s cognitive historical approach make *Creating Scientific Concepts* equally valuable to cognitive science and philosophy of science *Plato, Diagrammatic Reasoning and Mental Models* Susanna

Saracco,2023-08-03 This book analyses the role of diagrammatic reasoning in Plato s philosophy the readers will realize that Plato describing the stages of human cognitive development using a diagram poses a logic problem to stimulate the general reasoning abilities of his readers Following the examination of mental models in this book the readers will reflect on what inferences can be useful to approach this kind of logic problem Plato calls for a collaboration between writer and readers In this book the readers will examine the connection between diagrams and discovery realizing the important epistemic role of visualization They will recognize the crucial role that diagrams play in problem solving The logic problem elaborated by Plato is addressed considering the epistemic function of mental models These models introduce to an advanced stage of cognitive development in which reasoning uses in its investigations a higher level of mathematical complexity represented by structuralism Diagrammatic Representation and Inference Ahti-Veikko Pietarinen,Peter Chapman,Leonie Bosveld-de

Theories of Learning and Studies of Instructional Practice Timothy Koschmann,2011-04-19 This is a book about an attempt to change the way math was taught in

a particular classroom Its title plays on our everyday usage of the terms theory and practice In education these terms are conventionally treated oppositionally we have theories about what we should do and we have what teachers actually do do In this way theory stands prior logically and chronologically to practice practice inevitably becoming theory s imperfect realization We seek in this volume however to develop a different stance with regard to the relationship between the two Taking the details of instructional practice as our principle object of study we explore what role theories of learning might play in illuminating such practices The book is about actual practices by which teaching is done and how contemporary theories of learning might help us understand those practices It seeks to provide a foundation for future practice based inquiry in education by addressing the methodological question How do we go about studying instructional practice in a principled way

The Handbook of Rationality Markus Knauff, Wolfgang Spohn, 2021-12-14 The first reference on rationality that integrates accounts from psychology and philosophy covering descriptive and normative theories from both disciplines Both analytic philosophy and cognitive psychology have made dramatic advances in understanding rationality but there has been little interaction between the disciplines This volume offers the first integrated overview of the state of the art in the psychology and philosophy of rationality Written by leading experts from both disciplines The Handbook of Rationality covers the main normative and descriptive theories of rationality how people ought to think how they actually think and why we often deviate from what we can call rational It also offers insights from other fields such as artificial intelligence economics the social sciences and cognitive neuroscience The Handbook proposes a novel classification system for researchers in human rationality and it creates new connections between rationality research in philosophy psychology and other disciplines Following the basic distinction between theoretical and practical rationality the book first considers the theoretical side including normative and descriptive theories of logical probabilistic causal and defeasible reasoning It then turns to the practical side discussing topics such as decision making bounded rationality game theory deontic and legal reasoning and the relation between rationality and morality Finally it covers topics that arise in both theoretical and practical rationality including visual and spatial thinking scientific rationality how children learn to reason rationally and the connection between intelligence and rationality

Theory and Application of Diagrams Michael Anderson, Peter Cheng, Volker Haarslev, 2003-07-31 Diagrams 2000 is dedicated to the memory of Jon Barwise Diagrams 2000 was the rst event in a new interdisciplinary conference series on the Theory and Application of Diagrams It was held at the University of Edinburgh Scotland September 1 3 2000 Driven by the pervasiveness of diagrams in human communication and by the increasing availability of graphical environments in computerized work the study of diagrammatic notations is emerging as a research eld in its own right This development has simultaneously taken place in several scientific disciplines including amongst others cognitive science artificial intelligence and computer science Consequently a number of different workshop series on this topic have been successfully organized during the last few years Thinking with Diagrams Theory of Visual Languages Reasoning

with Diagrammatic Representations and Formalizing Reasoning with Visual and Diagrammatic Representations Diagrams are simultaneously complex cognitive phenomena and sophisticated computational artifacts So to be successful and relevant the study of diagrams must as a whole be interdisciplinary in nature Thus the workshop series mentioned above decided to merge into Diagrams 2000 as the single interdisciplinary conference for this exciting new field It is intended that Diagrams 2000 should become the premier international conference series in this area and provide a forum with sufficient breadth of scope to encompass researchers from all academic areas who are studying the nature of diagrammatic representations and their use by humans and in machines
