The Selected Classical Papers of Basil Lanneau Gildersleeve Basil Lanneau Gildersleeve, 1992

Selected Papers Herbert Robbins, 2012-12-06 Herbert Robbins is widely recognized as one of the most creative and original mathematical statisticians of our time The purpose of this book is to reprint on the occasion of his seventieth birthday some of his most outstanding research In making selections for reprinting we have tried to keep in mind three potential audiences 1 the historian who would like to know Robbins' seminal role in stimulating a substantial proportion of current research in mathematical statistics 2 the novice who would like a readable conceptually oriented introduction to these subjects and 3 the expert who would like to have useful reference material in a single collection In many cases the needs of the first two groups can be met simultaneously A distinguishing feature of Robbins' research is its daring originality which literally creates new specialties for subsequent generations of statisticians to explore Often these seminal papers are also models of exposition serving to introduce the reader in the simplest possible context to ideas that are important for contemporary research in the field An example is the paper of Robbins and Monro which initiated the subject of stochastic approximation We have also attempted to provide some useful guidance to the literature in various subjects by supplying additional references particularly to books and survey articles with some remarks about important developments in these areas

decision to undertake this volume was made in 1971 at Lake Como during the Varenna summer school of the Italian Physical

Society where Professor Leon Rosenfeld was lecturing on the history of quantum theory We had long been struck by the unique blend of epistemological historical and social concerns in his work on the foundations and development of physics and decided to approach him there with the idea of publishing a collection of his papers He responded enthusiastically and agreed to help us select the papers furthermore he also agreed to write a lengthy introduction and to comment separately on those papers that he felt needed critical re evaluation in the light of his current views For he was still vigorously engaged in both theoretical investigations of and critical not reflections on the foundations of theoretical physics We certainly did conceive of the volume as a memorial to a living saint but rather more practically as a useful tool to place in the hands of fellow workers and students engaged in wrestling with these difficult problems All too sadly fate has added a memorial aspect to our labors We agreed that in order to make this book most useful for the contemporary community of physicists and philosophers we should translate all non English items into English

Wollheim, H. Ralph Schumacher, 2001-12-06 While an emphasis on the new is vital to any science the relevance or importance of new discoveries cannot truly be appreciated without a strong sense of the framework of a discipline and of the ideas that helped to shape it With this in mind the editors of this book have attempted to create a canon of texts that formed the basis of rheumatology Selected Papers of Richard Feynman Richard Phillips Feynman, 2000 Selected articles on quantum chemistry classical and quantum electrodynamics path integrals and operator calculus liquid helium quantum gravity and computer theory *Victorian Engagements with the Bible and Antiquity* Simon Goldhill, Ruth Jackson Ravenscroft, 2023-10-12 A brilliant exposition of how the Bible and classical antiquity are central to the formation of Victorian self understanding *Classic Papers in Geriatric Medicine with Current Commentaries* Robert J. Pignolo, Monica Crane, Mary Ann Forciea, 2010-04-28 The field of geriatrics foundations is rooted in the classic papers of early descriptions of aging and age related diseases In *Classic Papers in Geriatric Medicine with Current Commentaries* the authors chose the classic papers providing a combination of expert opinion and objective assessment The 15 areas in this volume represent the beginnings of practice and thoughts about the best ways to care for older patients Each paper is introduced by a commentary describing the singular contributions of the chosen paper with a short list of other important early papers in that area and in many cases reflect on progress in that particular field The commentaries are personal statements by the authors about the influence of the papers chosen not meant to be exhaustive reviews of the clinical area in question *Classic Papers in Geriatric Medicine with Current Commentaries* exemplifies the importance of a paper and its ability to retain its impact over time While many of the classic papers in this collection have stood the test of time others have gained classic status by virtue of their profound influence in relatively quick measure or because of timeliness in filling a void in knowledge Facets of Systems Science George J. Klir, 2012-12-06 This book has a rather strange history It began in spring 1989 thirteen years after our Systems Science Department at SUNY Binghamton was established when I was asked by a group of students in our doctoral program to have a meeting with them The spokesman of the group Cliff Joslyn opened our meeting by stating its purpose I can closely paraphrase what he said We called this meeting to discuss with you as Chairman of the Department a fundamental problem with our systems science curriculum In general we consider it a good curriculum we learn a lot of concepts principles and methodological tools mathematical computational heuristic which are fundamental to understanding and dealing with systems And yet we learn virtually nothing about systems science itself What is systems science What are its historical roots What are its aims Where does it stand and where is it likely to go These are pressing questions to us After all aren't we supposed to carry the systems science flag after we graduate from this program We feel that a broad introductory

course to systems science is urgently needed in the curriculum Do you agree with this assessment The answer was obvious and yet not easy to give I agree of course but I do not see how the situation could be alleviated in the foreseeable future
