The new international division of labor and the imposition of structural adjustment on Third World countries has necessitated a reexamination of development policies and a reevaluation of the role

of gender in their success or failure Although women often bear the heaviest burden under structural adjustment there is also considerable evidence of women being empowered through their responses to the challenges of economic restructuring Based on case study material from Eastern Europe the Islamic nations Africa China and Latin America this volume explores the significant contributions women make to the wealth and well being of their families and nations The contributors argue persuasively that women may hold the key to sustainable development an increasingly critical issue at a time when policymakers are reconsidering the full costs and benefits of a growth fixated development model One of the first to embody the new gender and development paradigm this book reports on research at the frontiers of knowledge and theory about the gendered outcomes of economic transformation restructuring and social change By incorporating voices from the South it makes a provocative addition to our understanding of the political economy of development and of the relationship between world ecology and the world economy

Ecopolis Paul F. Downton, 2008-12-09 From 2008 for the first time in human history half of the world's population now live in cities Yet despite a wealth of literature on green architecture and planning there is to date no single book which draws together theory from the full range of disciplines from architecture planning and ecology which we must come to grips with if we are to design future cities which are genuinely sustainable Paul Downton's *Ecopolis* takes a major step along this path It highlights the urgent need to understand the role of cities as both agents of change and means of survival at a time when climate change has finally grabbed world attention and it provides a framework for designing cities that integrates knowledge both academic and practical from a range of relevant disciplines Identifying key theorists practitioners places and philosophies the book provides a solid theoretical context which introduces the concept of urban fractals and goes on to present a series of design and planning tools for achieving Sustainable Human Ecological Development SHED Combining knowledge from diverse fields to present a synthesis of urban ecology the book will provide a valuable resource for students researchers and practitioners in architecture construction planning geography and the traditional life sciences

Planning for Sustainability Stephen M. Wheeler, 2013-07-18 How can human communities sustain a long term existence on a small planet This challenge grows ever more urgent as the threat of global warming increases *Planning for Sustainability* presents a wide ranging intellectually well grounded and accessible introduction to the concept of planning for more sustainable and livable communities The text explores topics such as how more compact and walkable cities and towns might be created how local ecosystems can be restored how social inequalities might be reduced how greenhouse gas emissions might be lowered and how more

sustainable forms of economic development can be brought about The second edition has been extensively revised and updated throughout including an improved structure with chapters now organized under three sections the nature of sustainable planning issues central to sustainable planning and scales of sustainable planning New material includes greater discussion of climate change urban food systems the relationships between public health and the urban environment and international development Building on past schools of planning theory Planning for Sustainability lays out a sustainability planning framework that pays special attention to the rapidly evolving institutions and power structures of a globalizing world By considering in turn each scale of planning international national regional municipal neighborhood and site and building the book illustrates how sustainability initiatives at different levels can interrelate Only by weaving together planning initiatives and institutions at different scales and by integrating efforts across disciplines can we move towards long term human and ecological well being
