

# What is the CIM?

- A Unified Modeling Language (UML) based information model representing real-world objects and information entities exchanged within the value chain of the electric power industry
  - Maintained by IEC in the Sparx Enterprise Architect modeling tool
- Enable integration of applications/systems
  - Provides a common model behind all messages exchanged between systems
  - Basis for defining information exchange models
- Enable data access in a standard way
  - Common language to navigate and access complex data structures in any database
    - Provides a hierarchical view of data for browsing and access with no knowledge of actual logical schema
  - Inspiration for logical data schemas (e.g., for an operational data store)
- Not tied to a particular application's view of the world
  - But permits same model to be used by all applications to facilitate information sharing between applications

## **Sharing Cim Solutions:**

**Sharing CIM Solutions** Jørgen K. H. Knudsen, J. K. H. Knudsen, P. MacConaill, J. Bastos, 1994 This work is the result of the proceedings of the 10th Annual Conference 94 ESPRIT CIM Europe It reports on the results in development and implementation of CIM technologies The key technologies which are being developed and the results emerging from the collaborative projects have contributed to the establishment of an integrative approach to manufacturing problems which embraces engineering logistics process automation business functions organizational and environmental concerns

**Sharing CIM Solutions** Joergen K. H. Knudsen, 1994      **Holonic and Multi-Agent Systems for Manufacturing** Vladimír Mařík, Pavel Vrba, Paulo Leitão, 2011-08-19 This book constitutes the refereed proceedings of the 5th International Conference on Industrial Applications of Holonic and Multi Agent Systems HoloMAS 2011 held in Toulouse France August 29 31 2011 The 25 revised full papers presented were carefully reviewed and selected from 36 submissions The papers are organized in topical sections on industrial agents simulation and modelling planning and scheduling smart technical systems and MAS for unmanned aerial vehicles      *IT and Manufacturing Partnerships* Jimmie Browne, Ramón Haendler Mas, O. Hlodversson, 1996 The theme of this book is the development of partnerships between manufacturing companies their suppliers and customers and the facilitating of these partnerships by information technology and telecommunications In the 1980s the emphasis in manufacturing was on integration within the four walls of the manufacturing plant The main issues facing researchers and industrial practitioners at the time were CAD CAM integration integration of production planning and control systems the development of sophisticated computer driven manufacturing assembly and testing systems and their control through sophisticated shop floor control systems Today the emphasis has moved towards supply chain management integration of the supply chain through Electronic Data Interchange EDI and Just in Time JIT or Quick Response approaches and customer driven manufacturing This includes the integration of manufacturing and distribution logistics planning and control systems Consequently success for manufacturing companies in the 1990s requires closer collaboration with customers suppliers and distributors than in the past Information Technology and the emergence of a powerful global information infrastructure enable manufacturing industries throughout Europe to develop collaborative partnership across the value chain Successful collaboration is achieved by the sharing of information at all phases of the business cycle across the supply chain and across national and international boundaries The need to collaborate across the supply chain has particular consequences for small and medium sized manufacturing SMEs companies many of whom are compared and subassembly suppliers to the larger companies Indeed the collaboration between supplier SMEs and their large customers has in many cases gone beyond JIT supply of components based on orders delivered processed and frequently paid for using EDI technology and now extends to joint design and engineering activity Collaboration between manufacturing companies across the supply chain is therefore placing increasing pressure on the developers of the global information superhighway

and on the developers of CAD and other engineering software to ensure compliance with emerging standards such as STEP in order to allow intercompany collaboration These are the issues which form the background of this book The book is aimed at those researchers and industrial practitioners interested in learning about recent progress in manufacturing systems research and application Mature results emerging from the ESPRIT IiM programme are presented Readers Manufacturing managers an engineers Quality process engineers IT suppliers vendors Academic researchers Technology transfer centres and Industrial associations

**Process Planning and Scheduling for Distributed Manufacturing** Lihui Wang, Weiming Shen, 2007-05-14 This is the first book to focus on emerging technologies for distributed intelligent decision making in process planning and dynamic scheduling It has two sections a review of several key areas of research and an in depth treatment of particular techniques Each chapter addresses a specific problem domain and offers practical solutions to solve it The book provides a better understanding of the present state and future trends of research in this area

**The CIM Student's Practice and Revision Book** Anthony Annakin Smith, Paul Dixon, Andrew Sherratt, 2012-05-31 Supplementing the CIM Workbook series this Exam Practice Kit has a bank of additional questions to help you focus on applying your knowledge to passing the exam It is ideal for independent study or tutored revision courses helping you to prepare with confidence for exam day This kit looks at each of the subjects within the diploma level giving examples of different formats of questions There is also a revision checklist for each module so you can check wihci subjects you need to cover

**IMPACT Reference Model** Wim F. Gielingh, Alexander K. Suhm, 1993-01-19 This book covers the various aspects of the development of an integrated product and process modelling system using advanced computer technologies It describes languages and methodologies for developing an information reference model system architectures a link with emerging new standards such as ISO STEP and CIM OSA and a new approach for the definition of model semantics It discusses practical aspects of the usage and integration of computer aided design planning and production systems and shows how the reference model can be applied Concrete practical examples are given for two demonstration parts a sheet metal part and a ship propeller blade Much attention has been devoted to making the subject matter easy to understand for a wide audience The reference model is presented in easy to grasp chunks in a graphical informal way and many figures support the text The reader should gain a clear impression of the various technical aspects of CIM systems using modern techniques corresponding to emerging new standards Aspects of future systems are also included
