Modelling of Metal Forming Processes J.L. Chenot, E. Oñate, 2012-12-06 The physical modelling of metal forming processes has been widely used both in University and in Industry for many years Relatively simple numerical models such as

the Slab Method and the Upper Bound Method were first used and many such models are implemented in the industry for practical design or regulation of forming processes These are also under investigation in the University mainly for treatment models which require low cost calculations or very fast answers for on line integration More recently sophisticated numerical methods have been used for the simulation of metal flow during forming operations Since the early works in 1973 and 1974 mainly in U K and U S A the applications of the finite element method to metal processing have been developed in many laboratories all over the world Now the numerical approach seems to be widely recognized as a powerful tool for comprehension oriented studies for predicting the main technological parameters and for the design and the optimization of new forming sequences There is also a very recent trend for the introduction of physical laws in the thermo mechanical models in order to predict the local evolution of internal variable representing the micro structure of the metal To day more and more practitioners of the Industry are asking for computer models for design of their forming processes

DeGarmo's Materials and Processes in Manufacturing Ernest Paul DeGarmo, J. T. Black, Ronald A. Kohser, 2011-08-30 Now in its eleventh edition DeGarmo's Materials and Processes in Manufacturing has been a market leading text on manufacturing and manufacturing processes courses for more than fifty years Authors J T Black and Ron Kohser have continued this book's long and distinguished tradition of exceedingly clear presentation and highly practical approach to materials and processes presenting mathematical models and analytical equations only when they enhance the basic understanding of the material Completely revised and updated to reflect all current practices standards and materials the eleventh edition has new coverage of additive manufacturing lean engineering and processes related to ceramics polymers and plastics

Die Design Methodology for Pulsed Sheet Metal Forming Processes, 2016 In high speed sheet metal forming processes impact is concentrated over a small contact area and the resulting contact stress can compromise the structural integrity of the die It is important to accurately predict the associated workpiece tooling interface loads so that engineers can more confidently propose robust die designs The foundation for accurate predictions of contact stress on die is a reliable contact model within the context of a finite element simulation In the literature however there exists no comprehensive guideline for establishing a contact model for high speed sheet metal forming processes using the finite element method In this work a mathematically justified contact model and modeling recommendations are offered for the electrohydraulic forming process The model will focus on aspects such as contact algorithm mesh size and time step size that are known to play essential roles in providing accurate results in modelling of such high speed processes

Rubber-Pad Forming Processes Maziar Ramezani, Zaidi Mohd Ripin, 2012-03-14 This book describes different types of rubber pad forming processes currently being studied for their experimental and numerical advantages and disadvantages Rubber forming adopts a rubber pad contained in a rigid box in which one of the tools die or punch is replaced by the rubber pad Up to 60% of all sheet metal parts in aircraft industry such as frames seat parts ribs windows and doors are fabricated using rubber pad forming processes Key process parameters such

as rubber material stamping velocity rubber pad hardness and thickness and friction conditions are investigated The potential role of rubber as a flexible punch in metal working processes is to give insight to engineers about different parts that can be produced using this process The procedure of suitable die design for each process is presented in detail Full defect analysis is undertaken with a thorough report presented to optimize rubber pad forming processes
