An Anthropology of Puzzles Marcel Danesi, 2020-05-15 An Anthropology of Puzzles argues that the human brain is a puzzling organ which allows humans to literally solve their own problems of existence through puzzle format Noting the presence of puzzles everywhere in everyday life Marcel Danesi looks at puzzles in society since the dawn of history showing how their presence has guided large sections of human history from discoveries in mathematics to disquisitions in philosophy Danesi examines the cognitive processes that are involved in puzzle making and solving and connects them to the actual physical manifestations of classic puzzles Building on a concept of puzzles as based on Jungian archetypes such as the river crossing image the path metaphor and the journey Danesi suggests this could be one way to understand the public fascination with puzzles As well as drawing on underlying mental archetypes the act of solving puzzles also provides an outlet to move beyond biological evolution and Danesi shows that puzzles could be the product of the same basic neural mechanism that produces language and culture

Finally Danesi explores how understanding puzzles can be a new way of understanding our human culture Georgetown University Round Table on Languages and Linguistics (GURT) 1996: Linguistics, Language Acquisition, and Language Variation James E. Alatis, 1996-08-15 This volume examines linguistics language acquisition and language variation emphasizing their implications for teacher education and language education A majority of the essays consider issues in second language acquisition dealing specifically with learners and instructors or concentrating on the larger social and societal context in which learning and acquisition occur Topics highlighted include the current and often controversial debate over bilingual education language variation and the past present and future role of linguistics in language pedagogy
