example in the early days of computing users stored their data in text files in any format and organization they wanted. These early days were followed by information retrieval systems which required some structure for text documents such as a title, authors, and a publisher. The information retrieval systems were followed by database systems which added even more structure to the data and made querying easier. In the late 1990s the emergence of the Internet brought a period of relative chaos and interest in unstructured and semistructured data as it was envisioned that every web page would be like a page in a book. However, with the growing maturity of the Internet, the interest in structured data was regained because the most popular websites are in fact based on databases. The question is not whether future data stores need structure but what structure they need.

Objects and Databases Alan Dearle, Roberto V. Zicari, 2010-09-21. According to Francois Bancillon and Won Kim SIGMOD RECORD Vol 19 No 4 December 1990, object-oriented databases started in around 1983. Twenty-seven years later, this publication contains the proceedings of the Third International Conference on Object Oriented Databases (ICOODB 2010). Two questions arise from this: why only the third and what is of interest in the field of object-oriented databases in 2010? The first question is easy: in the 1980s and 1990s there were a number of conferences supporting the community: the International Workshops on Persistent Object Systems started by Malcolm Atkinson and Ron Morrison, the EDBT series, and the International Workshop on Database Programming Languages. These database-oriented conferences complimented other OO conferences including OOPSLA and ECOOP, but towards the end of the last century they dwindled in popularity and eventually died out. In 2008 the First International Conference on Object Databases was held in Berlin. In 2009 the second ICOODB conference was held at the ETH in Zurich as a scientific peer-reviewed conference. What is particular about ICOODB is that the conference series was established to address the needs of both industry and researchers who had an interest in object databases in innovative ways to bring objects and databases together and in alternative extensions to relational databases. The first conference set the mould for those to follow: a combination of theory and practice with one day focusing on the theory of object databases and the second focusing on their practical use and implementation.

Objects and Databases Klaus R. Dittrich, 2001-01-30. This book constitutes the thoroughly refereed post-proceedings of the International Symposium on Objects and Databases held in conjunction with ECOOP 2000 in Sophia Antipolis, France, in June 2000. The nine revised full papers, two short papers, and one demonstration presented together with one invited paper and panel discussion statements were carefully reviewed and selected from 21 submissions. The book offers topical sections on persistence, clustering, schema evolution, data mining, and data warehouse and miscellaneous.

Succeeding with Object Databases Akmal B. Chaudhri, Roberto Zicari, 2001. Take a tour with leading researchers and developers for a practical look at object databases. Whether you currently work with or are thinking of moving to object databases, Chaudhri and Zicari provide a collection of real-world case studies and examples that demonstrate how some of the world's leading companies and research institutions are leveraging Java, XML, and Object Relational Systems to build robust databases. Starting with a comprehensive introduction

to object and object relational databases the book then offers detailed discussions on some of the latest topics in the field such as JDBC and SQLJ support in relational databases and database modeling using UML. You'll also learn about object to relational mapping tools, architectural issues that influence performance, and the issues of complexity and scale. How popular tools from Computer Associates eXcelon, GemStone, Objectivity, Oracle, Versant, and Poet were used in the case studies is also discussed.
