Scientific Practices in European History, 1200-1800 Peter Dear, 2017-07-28 *Scientific Practices in European History* 1200 1800 presents and situates a collection of extracts from both widely known texts by such figures as Copernicus Newton and Lavoisier and lesser known but significant items all chosen to provide a perspective on topics in social cultural and intellectual history and to illuminate the concerns of the early modern period The selection of extracts highlights the emerging technical preoccupations of this period while the accompanying introductions and annotations make these occasionally complex works accessible to students and non specialists The book follows a largely chronological sequence and helps to locate scientific ideas and practices within broader European history The primary source materials in this collection stand alone as texts in themselves but in illustrating the scientific components of early modern societies they also make this book ideal for teachers and students of European history Summary of Colin Pask's Magnificent Principia Everest Media, 2022-06-13T22:59:00Z Please note This is a companion version not the original book Sample Book Insights 1 Newton was a man who changed our view of the world and set us on the path to modern science He was not a boy genius like Mozart but rather a man who was taught and encouraged by a talented father 2 Isaac Newton was born in 1642 He was named after his father a prosperous yeoman farmer who had died three months earlier The baby was premature tiny and sickly He did not have a good relationship with his grandmother and he was left out of his grandfather's will 3 Newton was a student at the University of Cambridge from 1661 to 1665 He was made a fellow of Trinity College in 1667 and in 1672 he published *Light and Colours* which described his theories on those subjects In 1675 he published his *Hypothesis Explaining the Properties of Light* 4 Newton was a very private person and he did not participate in university affairs However he did write letters to support the Christian religion and defend it against infidels He had a mental breakdown in 1693 but recovered and continued his various activities *Early Modern Europe, 1450-1789* Merry E. Wiesner-Hanks, Merry E. Wiesner, 2013-02-21 Thoroughly updated best selling textbook with new learning features This acclaimed textbook has unmatched breadth of coverage and a global perspective **Atoms and Alchemy** William R. Newman, 2010-05-05 Since the Enlightenment alchemy has been viewed as a sort of antiscience disparaged by many historians as a form of lunacy that impeded the development of rational chemistry But in *Atoms and Alchemy* William R Newman a historian widely credited for reviving recent interest in alchemy exposes the speciousness of these views and challenges widely held beliefs about the origins of the Scientific Revolution Tracing the alchemical roots of Robert Boyle's famous mechanical philosophy Newman shows that alchemy contributed to the mechanization of nature a movement that lay at the very heart of scientific discovery Boyle and his predecessors figures like the mysterious medieval Geber or the Lutheran professor Daniel Sennert provided convincing experimental proof that matter is made up of enduring particles at the microlevel At the same time Newman argues that alchemists created the operational criterion of an atomic element as the last point of analysis thereby contributing a key feature to the development of later chemistry *Atoms and Alchemy* thus provokes a refreshing debate about the origins of

modern science and will be welcomed and deliberated by all who are interested in the development of scientific theory and practice

Model-Based Reasoning in Science and Technology Lorenzo Magnani, 2013-08-31 This book contains contributions presented during the international conference on Model Based Reasoning MBR 012 held on June 21-23 in Sestri Levante Italy. Interdisciplinary researchers discuss in this volume how scientific cognition and other kinds of cognition make use of models abduction and explanatory reasoning in order to produce important or creative changes in theories and concepts. Some of the contributions analyzed the problem of model based reasoning in technology and stressed the issues of scientific and technological innovation. The book is divided in three main parts: models, mental models, representations, abduction, problem solving and practical reasoning, historical, epistemological and technological issues. The volume is based on the papers that were presented at the international

The Experimental Imagination Tita Chico, 2018-06-05 Challenging the two cultures debate, *The Experimental Imagination* tells the story of how literariness came to be distinguished from its epistemological sibling, science, as a source of truth about the natural and social worlds in the British Enlightenment. Tita Chico shows that early science relied on what she calls literary knowledge to present its experimental findings. More radically, she contends that science was made intellectually possible because its main discoveries and technologies could be articulated in literary terms. While early scientists deployed metaphor to describe the phenomena they defined and imagination to cast themselves as experimentalists, literary writers used scientific metaphors to make the case for the epistemological superiority of literary knowledge. Drawing on literature as well as literary language tropes and interpretive methods, literary knowledge challenges our dominant narrative of the scientific revolution as the *sine qua non* of epistemological innovation in the British Enlightenment. With its recourse to imagination as a more reliable source of truth than any empirical account, literary knowledge facilitates a redefinition of authority and evidence as well as of the self and society, implicitly articulating the difference that would come to distinguish the arts and sciences.

Minds in Motion Anne M. Thell, 2017-08-31 The central claim of *Minds in Motion* is that British travel writing of the long eighteenth century functions as an epistemological playing field where authors test empiricist models of engagement with the world while simultaneously seeking out the role of the self and the imagination in producing knowledge. Whether exploring the relationship between the senses and the mind, the narrative viability of experimental detachment or the literary dynamics of virtual witnessing, eighteenth century travel authors persistently confront their positionality and raise difficult questions about the nature and value of first hand experience. In one way or another, they also complicate empiricist ideals by exploring the limits of individual perception and the role of the imagination in generating and relating knowledge. While the genre is often viewed as either numbingly documentary or non-literary, and commercial travel literature actually operates at the front line of the period's intellectual developments, illustrating both how individual writers grapple with philosophical ideals and how these ideals filter into the lives of ordinary people. Indeed, travel literature directly engages the scientific and

philosophical concerns of the period while it is also widely avidly read as such it offers models for cognitive and rhetorical practices that are evaluated and either embraced or rejected by readers in a process of identification not unlike that which occurs in early English fiction Moreover because eighteenth century travel literature is so crucial to the development of so many fields from botany to the novel it illustrates vividly the divisive energies of discipline and genre formation while also archiving the shared aims and methods of what will become discrete fields of study Travelogues as diverse as Margaret Cavendish's *Blazing World* 1666 and Samuel Johnson's *Journey to the Western Islands of Scotland* 1775 reveal the epistemological circuitry of the eighteenth century and historicize the absorption of the philosophical tendencies that have come to define modernity *Biblical Scholarship, Science and Politics in Early Modern England* Kevin Killeen, 2016-12-05 Kevin Killeen addresses one of the most enigmatic of seventeenth century writers Thomas Browne 1605-1682 whose voracious intellectual pursuits provide an unparalleled insight into how early modern scholarly culture understood the relations between its disciplines Browne's work encompasses biblical commentary historiography natural history classical philology artistic propriety and an encyclopaedic coverage of natural philosophy This book traces the intellectual climate in which such disparate interests could cohere locating Browne within the cultural and political matrices of his time While Browne is most frequently remembered for the magnificence of his prose and his temperamental poise qualities that knit well with the picture of a detached apolitical figure this work argues that Browne's significance emerges most fully in the context of contemporary battles over interpretative authority within the intricately linked fields of biblical exegesis scientific thought and politics Killeen's work centres on a reassessment of the scope and importance of Browne's most elaborate text *Pseudodoxia Epidemica* his vast encyclopaedia of error with its mazy series of investigations and through this explores the multivalent nature of early modern enquiry **Maximilian Hell (1720-92) and the Ends of Jesuit Science in**

Enlightenment Europe Per Pippin Aspaas, László Kontler, 2019-12-02 The Viennese Jesuit court astronomer Maximilian Hell was a key figure in the eighteenth century circulation of knowledge He was already famous by the time of his celebrated 1769 expedition for the observation of the transit of Venus in northern Scandinavia However the 1773 suppression of his order forced Hell to develop ingenious strategies of accommodation to changing international and domestic circumstances Through a study of his career in local regional imperial and global contexts this book sheds new light on the complex relationship between the Enlightenment Catholicism administrative and academic reform in the Habsburg monarchy and the practices and ends of cultivating science in the Republic of Letters around the end of the first era of the Society of Jesus

Women, Imagination and the Search for Truth in Early Modern France Rebecca M. Wilkin, 2016-12-05 Grounded in medical juridical and philosophical texts of sixteenth and seventeenth century France this innovative study tells the story of how the idea of woman contributed to the emergence of modern science Rebecca Wilkin focuses on the contradictory representations of women from roughly the middle of the sixteenth century to the middle of the seventeenth and depicts this period as one

filled with epistemological anxiety and experimentation She shows how skeptics including Montaigne Marie de Gournay and Agrippa von Nettesheim subverted gender hierarchies and or blurred gender difference as a means of questioning the human capacity to find truth while positivists who strove to establish new standards of truth for example Johann Weyer Jean Bodin and Guillaume du Vair excluded women from the search for truth The book constitutes a reevaluation of the legacy of Cartesianism for women as Wilkin argues that Descartes opening of the search for truth even to women was part of his appropriation of skeptical arguments This book challenges scholars to revise deeply held notions regarding the place of women in the early modern search for truth their role in the development of rational thought and the way in which intellectuals of the period dealt with the emergence of an influential female public
