*Dependable Computing - EDCC 2005* Mario Dal Cin, Mohamed Kaâniche, András Pataricza, 2005-03-31 It is always a special honor to chair the European Dependable Computing Conference EDCC EDCC has become one of the well established conferences in the field of dependability in the European research area Budapest was selected as the host of this conference due to its traditions in organizing international scientific events and its traditional role of serving as a meeting point between East and West EDCC 5 was the fifth in the series of these high quality scientific conferences In addition to the overall significance of such a pan European event this year's conference was a special one due to historic reasons The roots of EDCC date back to the moment when the Iron Curtain fell Originally two groups of scientists from different European countries in Western and Eastern Europe who were active in research and education related to dependability created a joint forum in order to merge their communities as early as in 1989 This trend has continued up to today This year's conference was the first one where the overwhelming majority of the research groups belong to the family of European nations united in the European Union During the past 16 years we observed that the same roots in all the professional cultural and scientific senses led to a seamless integration of these research communities previously separated artificially for a long time EDCC has become one of the main European platforms to exchange new search ideas in the field of dependability

*Handbook of Network and System Administration* Jan Bergstra, Mark Burgess, 2011-08-11 System administration is about the design running and maintenance of human computer systems Examples of human computer systems include business enterprises service institutions and any extensive machinery that is operated by or interacts with human beings System administration is often thought of as the technological side of a system the architecture construction and optimization of the collaborating parts but it also occasionally touches on softer factors such as user assistance help desks ethical considerations in deploying a system and the larger implications of its design for others who come into contact with it This book summarizes the state of research and practice in this emerging field of network and system administration in an anthology of chapters written by the top academics in the field The authors include members of the IST EMANICS Network of Excellence in Network Management This book will be a valuable reference work for researchers and senior system managers wanting to understand the essentials of system administration whether in practical application of a data center or in the design of new systems and data centers Covers data center planning and design Discusses configuration management Illustrates business modeling and system administration Provides the latest theoretical developments

It is part of the now extinct CONSOLIDER INGENIO 2010 program, a highly competitive program which aimed to advance knowledge and open new research lines among top Spanish research groups. The project started in 2007 and will finish this 2014. Composed by 6 research groups from 6 different institutions, it has gathered an important number of researchers during its lifetime. Among the work produced by the ARES project, one specific work package has been related to privacy. This book gathers works produced by members of the project related to data privacy.
