Content Computing Chi-Hung Chi,Kwok-Yan Lam,2005-01-25 Welcome to the Advanced Workshop on Content Computing 2004 The focus of this workshop was Content Computing It emphasized research areas that facilitate efficient appropriate dissemination of content to users with the necessary access rights We use the word content instead of information or data because we want to cover not only raw data but also presentation quality The fast growth of the Internet has already made it the key infrastructure for information dissemination education business and entertainment While the client server model has been the most widely adopted paradigm for the WWW the desire to provide more value added services in the delivery layer has led to the concept of an active network where content driven intelligent computation will be performed to provide quality of service for content presentation and best t client demand These value added services typically aim to enhance information security provide pervasive Internet access and improve application robustness system network performance knowledge extraction etc They are realized by incorporating sophisticated mechanisms at the delivery layer which is transparent to the content providers

and Web surfers Consequently the notion of Content Computing has emerged Content computing is a new paradigm for coordinating distributed systems and intelligent networks based on a peer to peer model and with value added processing of the application specific contents at the livery layer This paradigm is especially useful to pervasive lightweight client devices such as mobile and portable end user terminals with a wide variation of hardware software configurations This year the workshop was held in Zhenjiang Jiangsu China We received 194 high quality papers from 11 regions namely PR China Korea Singapore Japan United States Canada Australia Germany Taiwan Italy and Hong Kong Totally 62 papers were accepted and presented in the workshop *The Total CISSP Exam Prep Book* Thomas R.
