*Sea-level research: a manual for the collection and evaluation of data* O. van de Plassche, 2013-12-20 An editorial by Wanless 1982 entitled Sea level is rising so what tells the case of an executive editor of a major city newspaper who when confronted with evidence for a recent sea level rise replied That just means the ocean is six inches deeper doesn't it Whether his so what attitude was real or put on to make a threat of sensation there is at present a wide and deepening interest in ongoing and future global sea level change This interest has grown along with the concern over global warming due to increasing levels of CO<sub>2</sub> and trace gases A stage has been reached where investigators of climate sea level relationships call for long term measurement programmes for ice volume changes using satellite altimetry and changes in temperature and salinity of the oceans thermal expansion This manual however is primarily concerned with sea level changes in the past mainly since the end of the last glaciation Its major objective is to help answer the question how which of course is little else but to assist in the gathering of fuel for the burning question why Good fuel hopefully for the less smoke and ashes and the more heat and light produced by that fire the better scientists are enabled to develop a quantitative understanding of past and hence of future sea level changes on different spatial and temporal scales

**Coated Grains** T. M. Peryt, 2012-12-06 Coated grains have always attracted attention at first of naturalists and later of geologists and the interest in these peculiar bodies was related both to their intriguing form and their significance in facies interpretation and sedimentology and to their relevance to accumulations of hydrocarbons and other mineral deposits This resulted in numerous publications on this subject and the intention of this volume is to summarize the present state of knowledge on coated grains The idea of the book was to unite some general papers with papers reporting case studies of both recent and ancient coated grains The organization of the book follows this intention The papers presented in this volume have been invited by the editor the theme of the book merits a few words of personal history The development of studies of coated grains during the last two decades has not only resulted in a great increase in knowledge of recent and ancient environments of coated grain formation but also numerous important and controversial questions of classification environmental significance mineralogical composition etc of ancient coated grains have arisen To answer these questions in 1978 I started the study of many ancient and recent occurrences of coated grains at the Institut für Geologie Ruhr University Bochum following the invitation of Hans Fichtbauer and sponsored by the Alexander von Humboldt Stiftung

Sand and Sandstone F. J. Pettijohn, P. E. Potter, R. Siever, 2012-12-06 This book is the outgrowth of a week long conference on sandstone organized by the authors first held at Banff Alberta in 1964 under the auspices of the Alberta Association of Petroleum Geologists and the University of Alberta and again in 1965 at Bloomington Indiana under the sponsorship of the Indiana Geological Survey and the Department of Geology Indiana University A 2 page syllabus was prepared for the second

conference and published by the Indiana Geological Survey Continuing interest in and demand for the syllabus prompted us to update and expand its contents The result is this book We hope this work will be useful as a text or supplementary text for advanced undergraduate and graduate courses in sedimentation sedimentary petrology or general petrology and perhaps will be helpful to the teachers of such courses Though we have focussed on sandstones we have necessarily included much of interest to students of all sediments We hope also that it will be a useful reference work for the professional geologist especially those concerned with petroleum ground water and economic geology either in industry or government Because the subject is so closely tied to surface processes it may also be of interest to geo morphologists and engineers who deal with beaches and rivers where sand is in transit

Long,Benjamin P. Horton,2015-02-19 Measuring sea level change be that rise or fall is one of the most pressing scientific goals of our time and requires robust scientific approaches and techniques This Handbook aims to provide a practical guide to readers interested in this challenge from the initial design of research approaches through to the practical issues of data collection and interpretation from a diverse range of coastal environments Building on thirty years of international research the Handbook comprises 38 chapters that are authored by leading experts from around the world The Handbook will be an important resource to scientists interested and involved in understanding sea level changes across a broad range of disciplines policy makers wanting to appreciate our current state of knowledge of sea level change over different timescales and many teachers at the university level as well as advanced level undergraduates and postgraduate research students wanting to learn more about sea level change Additional resources for this book can be found at [www.wiley.com/go/shennan/sealevel](http://www.wiley.com/go/shennan/sealevel)

aggradation gullying and plugging as well as bed form migration and generation of primary sedimentary structures. Additionally the quest for reservoir quality in contemporary hydrocarbon exploration and extraction necessitates a deliberate focus on diagenesis. This book addresses all of these challenges and arms geoscientists with an all in one reference to sedimentary rocks from source to deposition. Provides the latest data available on various aspects of sedimentary rocks from their source to deposition. Features case studies throughout that illustrate new data and critical analyses of published data by some of the world's most pre eminent sedimentologists. Includes more than 150 illustrations, photos, figures and diagrams that underscore key concepts.

Late Neogene Chronostratigraphy, Biostratigraphy, Biochronology and Paleoclimatology William A. Berggren, John A. Van Couvering, 1973. The integration of modern paleomagnetic, radiometric and biostratigraphic studies has provided an accurate geochronological framework for the past 10 million years. The Late Neogene Marine zones based on calcareous and siliceous planktonic organisms are recognized from the sub Arctic region to the sub Antarctic and their correlation to the paleomagnetic time scale is now feasible in some detail for the past 5 my. Likewise the relationship of geochemically calibrated mammalian biochronology to the marine succession has been greatly improved. Within this framework of time it is possible to delineate the history of major features in Late Neogene paleontology, climatology and oceanography. Author
