Sediments In Archaeological Context:

Sediments in Archaeological Context Julie K. Stein, William R. Farrand, 2001 Almost every artifact in archaeological analysis originates in or on the ground While there are elaborate methods for extracting and analyzing artifacts treatment of the matrix within which they are located is often unsophisticated and does not include systematic analysis Sediments in Archaeological Context concerns the analysis of this matrix and the potential use of sediments to answer archaeological questions Describing sediments and sampling them in appropriate ways do not replace the study of artifacts but they can provide additional useful information regarding a site complex its physical environment and the relations of artifacts to each other Each chapter in the volume considers sediments within a specific context Topics include sediments found in a variety of environments cultural environments rockshelter and cave environments dryland alluvial environments humid alluvial environments lake environments shoreline environments and spring and wetland environments Sediments in Archaeological Context is intended for every archaeologist who investigates sites in depositional contexts *Archaeological Sediments in Context* Julie K. Soils Stones and Symbols Cultural Perceptions of the Mineral World Nicole Boivin, Owic, 2013-07-04

Ethnographic and archaeological records feature a rich body of data suggesting that understandings of the mineral world are in fact both culturally variable and highly diverse. *Soils Stones and Symbols* highlights studies from the fields of anthropology, archaeology and philosophy that demonstrate that not all individuals and societies view minerals as commodities to be exploited for economic gain or as passive objects of disembodied scientific enquiry. In visiting such diverse contexts as contemporary India, colonial period Australia and prehistoric Europe and the Americas, the papers in this volume demonstrate that in pre-industrial societies minerals are often symbolically meaningful, ritually powerful and deeply interwoven into not just economic and material but also social, cosmological, mythical, spiritual and philosophical aspects of life. In addressing the theme of the mineral world, this book is not only unique within the social and geo-sciences but also at the forefront of recent attempts to demonstrate the importance of materiality to processes of human cognition and sociality. It draws upon theoretical developments relating to meaning, experience, the body and material culture to demonstrate that studies of rock art, landscapes, architecture, technology and resource use are all linked through the minerals that constantly surround us and are the focus of our never-ending attempts to understand and transform them.

Soils in Archaeological Research Vance T. Holliday, 2004-08-19

Soils, invaluable indicators of the nature and history of the physical and human landscape, have strongly influenced the cultural record left to archaeologists. Not only are they primary reservoirs for artifacts, they often encase entire sites. And soil-forming processes in themselves are an important component of site formation, influencing which artifacts, features and environmental indicators, floral, faunal and geological, will be destroyed and to what extent and which will be preserved and how well. In this book, Holliday will address each of these issues in terms of fundamentals as well as in field case histories from all over the world. The focus will be on principles of soil geomorphology, soil stratigraphy and soil chemistry and their applications in archaeological research.

Case Studies in Environmental Archaeology Elizabeth Reitz, C. Margaret Scarry, Sylvia J. Scudder, 2008

This book highlights studies addressing significant anthropological issues in the Americas from the perspective of environmental archaeology. The book uses case studies to resolve questions related to human behavior in the past rather than to demonstrate the application of methods. Each chapter is an original or revised work by an internationally recognized scientist. This second edition is based on the 1996 book of the same title. The editors have invited back a number of contributors from the first edition to revise and update their chapter. New studies are included in order to cover recent developments in the field or additional pertinent topics.

El Mirón Cave, Cantabrian Spain Lawrence Guy Straus, Manuel R. González Gonzales Morales, 2012-04-16 Though known as a site since 1903 El Mirón Cave in the Cantabrian Mountains of northern Spain remained unexcavated until a team from the universities of New Mexico and Cantabria began ongoing excavations in 1996 This large deeply stratified cave allowed the team to apply cutting edge techniques of excavation recording and multidisciplinary analysis in the meticulous study of a site that has become a new reference sequence for the classic Cantabrian region The excavations uncovered the long history of human occupation of the cave extending from the end of the Middle Paleolithic through the Upper Paleolithic up to the modern era This volume comprehensively describes the background information on the setting the site the chronology and the sedimentology It then focuses on the biological and archaeological records of the Holocene levels pertaining to Mesolithic Neolithic Chalcolithic and Bronze Age Archaeologists anthropologists and historians will be drawn to this study and its extensive findings dated by some seventy five radiocarbon assays
