## Seed Plants Of The High Andes Of Ecuador:

**Gradients in a Tropical Mountain Ecosystem of Ecuador** Erwin Beck, Jörg Bendix, Ingrid Kottke, Franz Makeschin, Reinhard Mosandl, 2008-01-24 A fascinating work that provides a wealth of information on one of the world's most biodiverse ecosystems. This is the result of investigations by almost 30 groups of researchers from various disciplines. They performed ecosystem analyses following two gradients: an altitudinal gradient and a gradient of land use intensity and ecosystem regeneration following human use. Based on these analyses, this volume discusses these findings in a huge variety of subject areas. *Catalogue of the Vascular Plants of Ecuador* Peter Møller Jørgensen, Susana León-Yáñez, 1999 Plant Diversity of an Andean Cloud Forest Grady L. Webster, Robert Rhode, 2001-04-26 Based on work spanning a decade, this study of the Maquipucuna area on the western slopes of the Andes discusses the climate, vegetation, ecological relationships, and flora, and emphasizes the importance of the Maquipucuna area as a biological reserve. In addition to the checklist of the flora, which enumerates 1,650 species, including 228 species of pteridophytes and over 200 species of orchids, appendices give information on floristic composition of communities, distribution of epiphytes, and elevational ranges of families and genera. The illustrations include a map, landscapes, and characteristic species. *Inventory of Seeds and Plants Imported*, 1938 *Forest Biodiversity in North, Central and South America, and the Caribbean* Francisco Dallmeier, James A. Comiskey, 1998 Biological diversity, research, environmental monitoring, forest ecology, Hurricane Hugo, wildlife, Canada, French Guiana, Virgin Islands, Puerto Rico, Brazil, Amazonia, Bolivia, Peru, Ecuador, Venezuela, flowers, plant life. **Guide to Standard Floras of the World** David G. Frodin, 2001-06-14 This 2001 book provides a selective annotated bibliography of the principal floras and related works of inventory for vascular plants. The second edition was completely updated and expanded to take into account the substantial literature of the late twentieth century and features a more fully developed review of the history of floristic documentation. The works covered are principally specialist publications such as floras, checklists, distribution atlases, systematic iconographies, and enumerations, or catalogues, although a relatively few more popularly oriented books are also included. The Guide is organised in ten geographical divisions, with these successively divided into regions and units, each of which is prefaced with a historical review of floristic studies. In addition to the bibliography, the book includes general chapters on botanical bibliography, the history of floras, and general principles and current trends, plus an appendix on bibliographic searching, a lexicon of serial abbreviations, and author and geographical indexes. **CRC World Dictionary of Grasses** Umberto Quattrocchi, 2006-04-26 2008 NOMINEE The Council on Botanical and Horticultural Libraries Annual Award for a Significant Work in Botanical or Horticultural Literature. Now we have easier and better access to grass data than ever before in human history. That is a marked step forward. Congratulazioni Professor Quattrocchi. Daniel F.
