Seed Production:

Seed Production Miller F. McDonald, Lawrence O. Copeland, 2012-12-06 Plant breeders continue to make significant advances in developing high yielding adaptable disease free crops These advances however are not realized until an efficient seed production system is in place that rapidly increases genetically superior crops and makes them available to the consumer in large quantities at a reasonable cost Successful seed production requires seed to be genetically pure free of admixtures and able to establish rapidly a uniform stand Seed production is a complex process Rigorous production criteria are followed by both seed producer and seed companies to ensure that high quality seed is produced and marketed These criteria become even more stringent in hybrid seed production This volume identifies the factors most critical in a successful seed production operation The fundamental considerations common to all seed crops are established in Part I Principles of Seed Production From this foundation the practices of seed production are provided in detail in Part II Seed Production of Specific Crops Seed Production P.
