Ellis,2012-04-17 The sharks ancient or modern real or imaginary have always been with us and will probably remain with us forever They appear not only in movies and literature but in countless permutations of size shape and materials permeating our daily lives with their silent menace In a sense humans live in a world replete with sharks not vice versa Thus Richard Ellis sets about chronicling and debunking the myths of sharks throughout history From 18th century art to the phenomena of JAWS the shark has remained the indomitable aggressor of the deep the last demon of humankind The image of the shark and the fear it inspires infiltrates our daily lives with its mythical power and strength But it is not man who should fear the shark Our need to dominate these predators is destroying them and their habitat Through hundreds of full color images Ellis proves the necessity of preserving these majestic creatures As curator of the Ft Lauderdale Museum of Art s exhibition entitled Shark debuting May 2012 Ellis adeptly turns these sleek efficient hunters from monsters of the deep into rare beautiful forces of nature **Shark Quest** Karen Romano Young,2018-08-01 Sharks are in trouble Fifty shark species are at high risk of extinction and another sixty three are threatened These intelligent mysterious and sometimes scary fish evolved about 420 million years ago They have adapted to survive deep in the ocean and in shallow water habitats Commercial fishing and finning are threatening shark populations So is water pollution Marine biologists and others including young people are working together to save these fascinating predators Discover the work of scientists and conservationists as they study shark biology and morphology research migration feeding and mating patterns delve into human climate and other threats to shark habitat and develop sophisticated technologies to aid sharks and shark research See how scientists also educate the public about real and imagined fear of sharks and encourage citizen participation in shark conservation efforts Learn about high tech tagging for tracking shark migration paths Discover the autonomous underwater vehicles and drones that divers use to observe and photograph sharks up close Visit shark sanctuaries in the South Pacific Ocean You ll even meet the Shark Lady a k a Eugenie Clark a pioneer ichthyologist shark scientist Through research and advocacy people around the world are working to protect and admire sharks A n engaging well researched book about a much maligned species of fish that deserves our protection Booklist A remarkably thorough tour of the world of sharks and marine scientists efforts to educate the public about our ocean s apex predators Kirkus Reviews **Shark** Dean Crawford,2008-08-01 A sleek hunter of the seas the shark has struck fear into the hearts of men since the days of the first fishermen Dean Crawford now explores here the long relationship between shark and man revealing that behind the fearsome caricature is a complex animal that deserves a thoughtful reconsideration With a lineage stretching back over 100 million years the shark has evolved into 350 different species from the great white to the pike bearing goblin to the tiny cookie cutter Crawford compiles

here a fascinating narrative that analyzes how and why the animal looms large in our cultural psyche While sharks have played a prominent part in religion and mythology they are more commonly perceived as deadly predators in such films as Jaws and Dr No or as symbols of natural violence as in Hemingway s Islands in the Stream Shark ultimately argues however that our ill informed emotional responses spurred by such representations have encouraged the wholesale slaughter of sharks and our ignorance endangers the very existence of the shark today Both a celebration of their lethal beauty and plea for their conservation Shark urges us to shed our fears and appreciate the magnificence of this majestic animal [National Library of Medicine Current Catalog National Library of Medicine \(U.S.\)](#),1971 First multi year cumulation covers six years 1965 70 *The Private Life of Sharks* Michael Bright,2000 Explores the world of one of the most fascinating frightening creatures on the planet offering a compelling look at the shark s often misunderstood life in the wild **Diversity and Adaptation in Fish Behaviour** Miles H.A. Keenleyside,2012-12-06 Fish are extremely successful vertebrates Because of a long and divergent history they are now found in almost every conceivable aquatic habitat This radiation has been accompanied by great diversity in structure physiology and behaviour Despite this variability fish must solve a number of basic problems that are common to all animals The most important of these are 1 to find and ingest appropriate food 2 to avoid predation and 3 to reproduce The main purpose of this book is to describe the variety of behavioural strategies that fish use in coping with these problems My approach has been to draw together material from both field and laboratory work that is widely scattered in the literature The major emphasis is on field studies since my main concern is with adaptive solutions to problems and I believe these are most likely to be correctly perceived by workers who are familiar with the natural ecological setting of their animals Of course many details of behaviour cannot be seen and quantified adequately in the field and therefore I have not ignored laboratory studies However even here I have concentrated on work that illustrates the variety of solutions that fish use to solve the three basic problems Much important work for instance on causation development and learning is not included [Sharkpedia](#) Daniel Abel,2024-05-28 A fun pocket size A Z treasury about sharks featuring fascinating little known facts and captivating illustrations Sharkpedia is an entertaining and enlightening celebration of sharks featuring close to 100 entries based on the latest knowledge and enriched by original illustrations Avoiding tired factoids shark authority Daniel Abel gives new bite to essential information about sharks including their adaptations as top predators 450 million year evolution behavioral complexity ecological importance existential threats and often sensationalized appearances in popular culture from Jaws to Shark Week The notion that sharks are insatiable killing machines is a toothless myth yet the fear of shark attacks still holds on to many people like a set of locked jaws Sharkpedia reveals that sharks are much less to be feared and much more interesting complicated and important than many realize Filled with compelling stories Sharkpedia debunks shark myths for example that sharks are large and coastal when in fact most are small and inhabit the deep sea describes their lives where and how long they live how many offspring they have

what they eat and how their bodies function introduces a variety of iconic and obscure species such as the Happy Eddie Shyshark explores our love hate relationship with sharks and much more With charming drawings by leading shark artist Marc Dando Sharkpedia is a scientific and cultural treasure trove that will leave you with new insights about these remarkable animals Dive in Features a cloth cover with an elaborate foil stamped design Sharks in the Arts Vivienne Westbrook,Shaun Collin,Dean Crawford,Mark Nicholls,2018-05-11 This book is the most thorough exploration to date of the many ways in which a wild creature has been absorbed reimagined and represented across the ages in all of the major art forms The authors consider not only how the identity of sharks in the natural environment became incorporated into a cultural environment but also how sharks came to be considered the most feared creatures in the open oceans as a consequence of this incorporation Yet sharks are especially important in helping to maintain a balance that is essential to the health of the oceans The book begins with a treatment of the three sharks at the top of global shark attack files from scientific economic and environmental perspectives Subsequent chapters engage with cultural representations of sharks in poetry drama art novels screenplay adaptations and films Through an exploration of the ways in which sharks have been represented in human culture through the centuries this book alerts the global community to the importance of sharks as a common cultural heritage It aims to change perceptions of sharks so that they can become more revered than feared The authors of this book argue that an increased understanding of sharks should lead to the development of better strategies for shark and human interactions This book will be of great interest to researchers and students of the Environmental Humanities Cultural History and the Arts It is also excellent supplementary reading for courses in Zoology and Marine Science *Sport Diver* ,2006-05 **The Great Explorers** Robin Hanbury-Tenison,2018-10-16 Penetrating biographies written by a group of distinguished travel writers broadcasters and historians reveal the lives motives and passions of forty major explorers in history It has always been mankind s gift or curse to be inquisitive and through the ages people have been driven to explore the limits of the worlds known to them and beyond Here are the stories of forty of the world s greatest explorers from Europe America Asia and Australia These are men and women who changed our perception of the world through their courageous adventures Organized thematically the book opens with the oceanic journeys of five hundred years ago when the great era of recorded exploration began The following sections look at The Land Rivers Polar Ice Deserts Life on Earth and New Frontiers Many of these explorers recounted their journeys in vivid firsthand accounts others were superb artists or photographers The book features quotes from their journals and reports and it is illustrated with paintings photographs engravings and maps so that we can experience their adventures through their own eyes and in their own words Featured explorers include Christopher Columbus Vasco da Gama James Cook Lewis and Clark Richard Burton Samuel de Champlain David Livingstone Roald Amundsen Gertrude Bell Alexander von Humboldt Yuri Gagarin and Jacques Yves Cousteau Soldier of Fortune 500 Steve Romaine,2002-08 At last a book that with honesty and humor reveals the

In the Name of Sharks François Sarano, 2023-10-17 Twenty metres below water the oceanographer François Sarano came face to face with a five and a half metre great white shark Seduced by the gentle elegance of this majestic creature Sarano experienced a profound sense of affinity with her as they swam side by side shoulder to shoulder eye to eye cutting a single figure through the ocean depths It was an experience which made him realize the depth of our ignorance of the lives of sharks leading him to become a passionate advocate for their protection Drawing on the latest scientific research on the biology and ethology of sharks and their exceptional characteristics this book aims to break through the barrier of prejudice and to pay homage to their true nature Representing a last vestige of wildness their populations are nevertheless under threat like so many species they have been hunted and exploited by humans Sarano argues for a change of mindset in which we lose ourselves in the world of the other so that each living entity human and non human can take their rightful place in the broader global ecosystem Also available as an audiobook
