An Archaic Mexican Shellmound and Its Entombed Floors Barbara Voorhies, 2015-12-31 Tlacuachero is the site of an  
Archaic period shellmound located in the wetlands of the outer coast of southwest Mexico This book presents investigations  
of several floors that are within the site s shell deposits that formed over a 600 800 year interval during the Archaic period ca  
8000 2000 BCE a crucial timespan in Mesoamerican prehistory when people were transitioning from full blown dependency  
on wild resources to the use of domesticated crops The floors are now deeply buried in an limited area below the summit of  
the shellmound The authors explore what activities were carried out on their surfaces discussing the floors patterns of  
cultural features sediment color density and types of embedded microrefuse and phytoliths as well as chemical signatures of  
organic remains The studies conducted at Tlacuachero are especially significant in light of the fact that data rich lowland  
sites from the Archaic period are extraordinarily rare the wealth of information gleaned from the floors of the Tlacuachero  
shellmound can now be widely appreciated      **Archaeology of the Southern San Joaquin Valley, California** Edward

Bay was excavated and subsequently destroyed in the early twentieth century From its stratified deposits which span the  
period 2600 to 700 years ago the author identified 2 004 fish and 15 893 mammal specimens and analyzed these and 2 302
