Peelle, Arthur Wingfield, 2015-06-03 Efficient auditory processing requires the rapid integration of transient sensory inputs This is exemplified in human speech perception in which long stretches of a complex acoustic signal are typically processed accurately and essentially in real time Spoken language thus presents listeners auditory systems with a considerable challenge even when acoustic input is clear However auditory processing ability is frequently compromised due to congenital or acquired hearing loss or altered through background noise or assistive devices such as cochlear implants How does loss of

sensory fidelity impact neural processing efficiency and health How does this ultimately influence behavior This Research Topic explores the neural consequences of hearing loss including basic processing carried out in the auditory periphery computations in subcortical nuclei and primary auditory cortex and higher level cognitive processes such as those involved in human speech perception By pulling together data from a variety of disciplines and perspectives we gain a more complete picture of the acute and chronic consequences of hearing loss for neural functioning

Animas-La Plata Project (CO,NM) ,1996 *Optical Burst Switched Networks* Jason P. Jue, Vinod M. Vokkarane, 2006-06-07 Next generation high speed Internet backbone networks will be required to support a broad range of emerging applications which may not only require significant bandwidth but may also have strict quality of service QoS requirements Furthermore the traffic from such applications are expected to be highly bursty in nature For such traffic the allocation of static fixed bandwidth circuits may lead to the over provisioning of bandwidth resources in order to meet QoS requirements Optical burst switching OBS is a promising new technique which attempts to address the problem of efficiently allocating resources for bursty traffic In OBS incoming data is assembled into bursts at the edges of the network and when the burst is ready to be sent resources in the network are reserved only for the duration of the burst The reservation of resources is typically made by an out of band one way control message which precedes the burst by some offset time By reserving resources only for the duration of the burst a greater degree of utilization may be achieved in the network This book provides an overview of optical burst switching Design and research issues involved in the development of OBS networks are discussed and approaches to providing QoS in OBS networks are presented Topics include Optical burst switching node and network architectures Burst assembly Signaling protocols Contention resolution Burst scheduling Quality of service in OBS networks

Federal Register ,2013-08 Basic and Applied Aspects of Noise-Induced Hearing Loss Richard J. Salvi, D. Henderson, R. P. Hamernik, V. Colletti, 2013-03-09 In September 1985 NATO sponsored an Advanced Study WO1 kshop entitled Noise Induced Hearing Loss Basic and Applied Aspects The meeting was held in a mountain retreat near Lucca Italy and was attended by scientists clinicians and public officials from 12 countries This was the third in a series of such conferences organized by the authors The first two were supported by the United States National Institute of Occupational Safety and Health their proceedings were published as *The Effects of Noise on Hearing* in 1976 and *New Perspectives on Noise Induced Hearing Loss* in 1982 The Organizing Committee approached NATO because it was felt that the problem of noise was common to all industrialized countries and was an especially serious problem for the military Thus

the NATO sponsorship and the Italian site of the meeting were part of the Organizing Committee's plan to obtain an international and thorough representation on the problem of noise induced hearing loss. The NATO meeting and proceedings followed the format of the previous two symposia with an initial focus on the anatomical and physiological disturbances resulting from noise induced hearing loss. This was followed by sections devoted to studies of a more applied nature involving general auditory performance in noise issues associated with the establishment of noise exposure criteria, nonauditory effects of noise and the interaction of noise with other agents.

Building QoS into Distributed Systems Andrew T. Campbell, Klara Nahrstedt, 2013-06-29 Welcome to IWQOS 97 in New York City. Over the past several years there has been a considerable amount of research within the field of Quality of Service (QoS). Much of that work has taken place within the context of QoS support for distributed multimedia systems, operating systems, transport subsystems, networks, devices, and formal languages. The objective of the Fifth International Workshop on Quality of Service (IWQOS) is to bring together researchers, developers, and practitioners working in all facets of QoS research. While many workshops and conferences offer technical sessions on the topic of QoS, none other than IWQOS provide a single track workshop dedicated to QoS research. The theme of IWQOS 97 is building QoS into distributed systems. Implicit in that theme is the notion that the QoS community should now focus on discussing results from actual implementations of their work. As QoS research moves from theory to practice, we are interested in gauging the impact of ideas discussed at previous workshops on development of actual systems. While we are

interested in experimental results IWQOS remains a forum for fresh and innovative ideas emerging in the field As a result of this authors were solicited to provide experimental research long papers and more speculative position short statements for consideration We think we have a great invited and technical program lined up for you this year The program reflects the Program Committees desire to hear about experiment results controversial QOS subjects and retrospectives on where we are and where we are going Oxford Textbook of Vertigo and Imbalance Adolfo Bronstein,2013-02-21 Vertigo dizziness and imbalance rank amongst the most common presenting symptoms in neurology ENT geriatric medicine and general practice These symptoms can originate from many different organs and systems such as the inner ear general medical conditions and neurological and psychological disorders The Oxford Textbook of Vertigo and Imbalance covers the scientific basis clinical diagnosis and treatments for the disorders leading to dizziness and poor balance Each chapter comprehensively covers the established knowledge of each disorder as well as introducing the reader to the latest research aspects Additionally the specialist authors offer their own clinical opinions based on practice and experience Didactic tables figures and diagrams are used throughout this volume to enhance understanding The print edition is complemented by an online version which allows access to the full content of the textbook contains links from the references to primary research journal articles allows full text searches and provides access to figures and tables that can be downloaded to PowerPointRG **Age-Related**
