Mitigation of Indoor Radon Problem: A Case Book for Radon Professionals Ashok Kumar, Akhil Kadiyala, 2015-10-30

Radon is a highly radioactive gas and a waste product of nuclear reactors Radon is also carcinogenic for this reason and can be linked to the incidence of lung cancer in non smoking individuals who often spend time indoors Assessment and Mitigation of Indoor Radon Problem is a case book for professionals who are interested in modeling the distribution of Radon gas in a real environment The book is a collection of results taken from a survey of locations in the US state of Ohio The data in this case book is based on the homes and mitigation databases of the Ohio Radon Information System ORIS maintained by the Air Pollution Research Group APRG at The University of Toledo in Toledo This case book will be of interest to software engineers and environmental health workers seeking to build a geographic information system for tracking radioactive waste that can contaminate residential areas particularly household indoors *Metrological Assurance for Environmental Control*

Karolina Havrilla, 1989

Low-Level Environmental Radioactivity Richard Tykva, Jozef Sabol, 1995-04-13

From the Introduction Low level radioactivity is related to those radioactive sources of ionizing radiation that are characterized by low activities Sometimes activity here does not represent total amount of radionuclides but rather their concentration In other cases the total activity may be quite high but we can measure only a relatively small portion of the material Low may have for different situations and circumstances not only considerably different meanings but also different absolute values as far as the activity or activity concentration is concerned For example one can refer to low activity in the case of radiocarbon dating where the concentration of ^{14}C is actually lower than its natural concentration and also in the case of radon monitoring where especially in mines or in some enclosed spaces its concentration may be several thousand times higher than the outdoor natural concentrations Emphasis is now being placed on the analysis of naturally occurring radionuclides in the environment or on the release of radionuclides from their different man made sources because liquid and aerial discharge level controls have become more rigorous In addition the applicability of low level methodology increases the extent of different radionuclide applications considerably Since individual radionuclides differ in their decay scheme and particles emitted as well in their energies there is no universal method for the accurate measurement of all radioactive sources Moreover there is usually a mixture of radionuclides in a sample causing some difficulties in a selective evaluation of a given radionuclide Due to the random nature of radioactive disintegrations the appropriate interpretation of the experimental results would be in most cases impossible without elaborate statistical treatment and evaluation of the data obtained Thanks

to the availability of computer based instrumentation the measuring data can be in most cases processed and evaluated on line which makes it possible to control and optimize the experiment in order to extract the maximum amount of information carried by the detector response The purpose of this book is to provide an introduction to low level radioactivity assessment and to clarify the nature of its sources as well as the principal methods used in its measurement Our evaluation is concentrated on the present day aspects of low level methodology The book may be useful for all who need highly sensitive analysis of natural or artificial radioactivity both within and outside the nuclear field The attempt of this book is to summarize the sources of environmental radioactivity and their possible radiological impact in terms of resulting doses to the population and to present a sound review of the measuring methods and techniques for the evaluation of low level radioactivities encountered in both the environment and in a number of applications where radioactive sources are used as a means of obtaining important information

Occupational Radiation Protection in the Uranium Mining and Processing Industry IAEA,2020-06-05 This Safety Report has been developed as part of the IAEA programme on occupational radiation protection to provide for the application of its safety standards in implementing a graded approach to the protection of workers against exposures associated with uranium mining and processing The publication describes the methods of production associated with the uranium industry and provides practical information on the radiological risks to workers in the exploration mining and processing of uranium It is a compilation of detailed information on uranium mining and processing stages and techniques general radiation protection considerations in the relevant industry general methodologies applicable for control monitoring and dose assessment exposure pathways and radiation protection programmes for a range of commonly used mining and processing techniques

Journal of Research of the National Institute of Standards and Technology ,1990 Reports NIST research and development in the physical and engineering sciences in which the Institute is active These include physics chemistry engineering mathematics and computer sciences Emphasis on measurement methodology and the basic technology underlying standardization

WHO Handbook on Indoor Radon World Health Organization,2009 This handbook focuses on residential radon exposure from a public health point of view and provides detailed recommendations on reducing health risks from radon and sound policy options for preventing and mitigating radon exposure The material in the handbook reflects the epidemiological evidence that indoor radon exposure is responsible for a substantial number of lung cancers in the general population Information is provided on the selection of devices to measure radon levels and on procedures for the reliable measurement of these levels Discussed also are control options for radon in new dwellings radon reduction in existing dwellings as well as assessment of the costs and benefits of different radon prevention and remedial actions Also covered are radon risk communication strategies and organization of national radon programs Publisher s description

Energy Research Abstracts ,1995 **Advances in Nuclear Science and Technology** Jeffery Lewins,Martin Becker,2012-12-06 The editors are happy to present the twentieth volume in the review series

Advances in Nuclear Science and Technology Lahey and Drew our first authors present a concise development of the equations for two phase flow essential to the understanding of normal and even more accidental behavior in water cooled reactors The commitment to the PWR in Europe now joined by England in this respect and the aftermath of Chernobyl in the U S S R put continuing emphasis on the need for good understanding of two phase phenomena to provide good modelling The second review by Downar and Sesonske of light water reactor fuel modelling follows this LWR interest and emphasises a current major economic interest how to get the most out of fuel Recollecting that the capital cost of nuclear power is high it is easy to overlook the fact that in the lifetime of a plant as much money is spent on fuel as capital Optimization is worthwhile The U S scene still does not practice recycling whereas the European scene does Now that the United Kingdom is building its first commercial light water reactor the linear modelling of burnup exploited by the second authors will prove even more useful although previously exploited for advanced gas cooled reactors If the U K is behind in this respect the recycling undertaken by France and England has led to trial use of plutonium in thermal reactors but even more the availability of plutonium for fast reactors

Risk Assessment in Setting National Priorities James J. Bonin, Donald E. Stevenson, 2013-03-08

The growing perception of the public and politicians that life is extremely risky has led to a dramatic and increasing interest in risk analysis The risks may be very diverse as demonstrated by the range of subjects covered at the annual meetings of the Society for Risk Analysis There is a need to pause and see how well the present approaches are serving the nation The theme Setting National Priorities which was chosen for the 1987 SRA Annual Meeting reflects the concern that in dealing with individual kinds of risks society may be more concerned with the trees than the forest It is surprising how little attention is being given to the holistic aspects of risk Who for instance is responsible for a national strategy to manage the reduction of health or other risks Individual agencies have the responsibility for specific patterns of exposure but these are not integrated and balanced to determine how the nation as a whole can obtain the greatest benefit for the very large investment which is made in risk related research and analysis
