Physical Basis Of Predication:

The Physical Basis of Predication Andrew Newman,1992-10-30 In this book about metaphysics the author defends a realistic view of universals characterizing the notion of universal by considering language and logic the idea of possibility hierarchies of universals and causation He argues that neither language nor logic is a reliable guide to the nature of reality and that basic universals are the fundamental type of universal and are central to causation All assertions and predications about the natural world are ultimately founded on these basic universals A distinction is drawn between unified particulars which reveal natural principle of unity and arbitrary particulars which lack such a principle unified particulars are the terms of causal relations and thus the real constituents of the world The world is not made up of events but of unified particulars and basic universals

The Nature of True Minds John Heil,1992-09-25 This work proposes a way to a naturalistic synthesis one that accords the mental a place in the physical world alongside the non mental

The Body in Mind Mark Rowlands,1999-11-28 In this book Mark Rowlands challenges the Cartesian view of the mind as a self contained monadic entity and offers in its place a radical externalist or environmentalist model of cognitive processes Cognition is not something done exclusively in the head but fundamentally something done in the world Drawing on both evolutionary theory and a detailed examination of the processes involved in perception memory thought and language use Rowlands argues that cognition is in part a process whereby creatures manipulate and exploit relevant objects in their environment It is not simply an internal process of information processing equally significantly it is an external process of information processing This innovative book provides a foundation for an unorthodox but increasingly popular view of the nature of cognition

God and the Nature of Time Garrett J. DeWeese,2017-03-02 Is God temporal in time or atemporal outside of time Garrett DeWeese begins with contemporary metaphysics and physics developing a causal account of dynamic time Drawing on biblical material as well as discussions of divine temporality in medieval and contemporary philosophical theology DeWeese concludes that God is temporal but not in physical time as we measure it Interacting with issues in the history of philosophy contemporary philosophy of science and philosophy of religion this book offers students a thorough introduction to the key issues and key figures in historical and contemporary work on the philosophy of time and time in theology

Commitment, Value, and Moral Realism Marcel S. Lieberman,1998-09-24 Despite the importance of commitment in moral and political philosophy there has hitherto been little extended analysis of it Marcel Lieberman examines the conditions under which commitment is possible and offers at the same time an indirect argument for moral realism He argues that realist evaluative beliefs are functionally required for commitment especially regarding its role in self understanding and since it is only within a realist framework that such beliefs make sense realism about values is a condition for the possibility of commitment itself His ambitious study addresses questions that are of great interest to analytic philosophers but also makes many connections with continental philosophy and with folk psychology sociology and cognitive science and will be seen as a distinctive

intervention in the debate about moral realism The Problem of Universals in Early Modern Philosophy Stefano Di Bella, Tad M. Schmaltz, 2017 This is a collection of essays from an international group of scholars that explore the ways in which the ancient problem of universals was transformed in modern philosophy Essays consider the various forms of Platonism conceptualism and nominalism in the writings of a broad range of modern thinkers Ontology, Modality and the Fallacy of Reference Michael Jubien, 1993-08-27 This is a book about the concept of a physical thing and about how the names of things relate to the things they name It questions the prevalent view that names refer to or denote the things they name Instead it presents a new theory of proper names according to which names express certain special properties that the things they name exhibit This theory leads to some important conclusions about whether things have any of their properties as a matter of necessity This will be an important book for philosophers in metaphysics and the philosophy of language though it will also interest linguists concerned with the semantics of natural language **Ontology, Identity, and Modality** Peter van Inwagen, 2001-03-22 This book gathers together thirteen of Peter van Inwagen's essays on metaphysics several of which have acquired the status of modern classics in their field They range widely across such topics as Quine's philosophy of quantification the ontology of fiction the part whole relation the theory of temporal parts and human knowledge of modal truths In addition van Inwagen considers the question as to whether the psychological continuity theory of personal identity is compatible with materialism and defends the thesis that possible states of affairs are abstract objects in opposition to David Lewis's extreme modal realism A specially written introduction completes the collection which will be an invaluable resource for anyone interested in metaphysics Ontology, Modality, and Mind Alexander Carruth, Sophie Gibb, John Heil, 2018-10-04 This book explores a range of traditional and contemporary metaphysical themes that figure in the writings of E J Lowe whose powerful and influential work was still developing at the time of his death in 2015 During his forty year career he established himself as one of the world's leading philosophers publishing eleven single authored books and well over two hundred essays His scholarship was strikingly broad ranging from early modern philosophy to the interpretation of quantum mechanics His most important and sustained contributions were to philosophy of mind philosophical logic and above all metaphysics E J Lowe was committed to a systematic realist and scientifically informed neo Aristotelean approach to philosophy This volume presents a set of new essays by philosophers who share this commitment addressing interrelated themes of his work In particular these papers focus upon three closely connected topics central not only to Lowe's work but to contemporary metaphysics and philosophy of mind in general ontology and categories of being essence and modality and the metaphysics of mental causation *A World of States of Affairs* D. M. Armstrong, 1997-03-06 Offers a comprehensive system of analytical metaphysics argued from a distinctive philosophical perspective **Metaphysics and the Representational Fallacy** Heather Dyke, 2012-07-26 This book is an investigation into metaphysics its aims scope methodology and practice Dyke argues that metaphysics should take itself to be concerned with investigating the

fundamental nature of reality and suggests that the ontological significance of language has been grossly exaggerated in the pursuit of that aim *The Grammar of Meaning* Mark Norris Lance, John P. Hawthorne, 1997-12-11 This study addresses a range of central topics in Anglo American philosophy of language Language in the World M. J. Cresswell, 2007-11-12 A book length treatment of relation between words and meaning using possible worlds semantics *Intrinsic Value* Noah M. Lemos, 1994-09-30 This book explores the justification of our beliefs about intrinsic value **What Minds Can Do** Pierre Jacob, 1997-01-23 This 1997 book explores the representational powers of a person's mind The Facts of Causation D.H. Mellor, 2002-09-11 Everything we do relies on causation We eat and drink because this causes us to stay alive Courts tell us who causes crimes criminology tell us what causes people to commit them D H Mellor shows us that to understand the world and our lives we must understand causation The Facts of Causation now available in paperback is essential reading for students and for anyone interested in reading one of the ground breaking theories in metaphysics We cannot understand the world and our place in it without understanding causation Yet a complete account of the nature and implications of causation does not exist D H Mellor's new book is that account **The World Without, the Mind Within** André Gallois, 1996-12-12 A challenging study of the character of our knowledge of our own intentional states **Morality and Action** Warren Quinn, 1993 This collection contains Warren Quinn's most important contributions to moral philosophy and has been edited for publication by Philippa Foot *Causes and Coincidences* David Owens, 1992-08-28 In an important departure from theories of causation David Owens proposes that coincidences have no causes and that a cause is something which ensures that its effects are no coincidence In *Causes and Coincidences* he elucidates the idea of a coincidence as an event which can be analysed into constituent events the nomological antecedents of which are independent of each other He also suggests that causal facts can be analysed in terms of non causal facts including relations of necessity Thus causation is defined in terms of coincidence and coincidence without reference to causation David Owens challenges the ideas associated with Hume Davidson and Lewis constructing a theory which distinguishes nomological necessity and sufficiency from their logical counterparts He is able to offer novel solutions to the major problems of causation including the direction of causation the logical form of causal statements the distinction between causal connections and logical connections and the relationship between psychological and physical causation **Practical Reasoning about Final Ends** Henry S. Richardson, 1997-02-28 This book argues against philosophical opponents that we can determine our ends or goals rationally
