A Comparative Study David M. Steier,A. Penny Anderson,2012-12-06 In early 1986 one of us D M S was constructing an artificial intelligence system to design algorithms and the other A P A was getting started in program transformations research We shared an office and exchanged a few papers on the systematic development of algorithms from specifications Gradually we realized that we were trying to solve some of the same problems And so despite radical differences between ourselves in research approaches we set out together to see what we could learn from these papers That s how this book started a couple of graduate students trying to cope with The Literature At first there was just a list of papers One of us D M S tried to cast the papers in a uniform framework by describing the problem spaces searched an approach used in artificial intelligence for understanding many tasks The generalized problem space descriptions though useful seemed to abstract too much so we decided to compare papers by different authors dealing with the same algorithm These comparisons proved crucial for then we began to see similar key design choices for each algorithm *Rational Numbers* Thomas P.

Carpenter,Elizabeth Fennema,Thomas A. Romberg,2012-10-12 Until recently there had been relatively little integration of programs of research on teaching learning curriculum and assessment However in the last few years it has become increasingly apparent that a more unified program of research is needed to acquire an understanding of teaching and learning in schools that will inform curriculum development and assessment The chapters in this volume represent a first step toward an integration of research paradigms in one clearly specified mathematical domain Integrating a number of different research perspectives is a complex task and ways must be found to reduce the complexity without sacrificing the

integration The research discussed in this volume is tied together because it deals with a common content strand During the last ten years specific content domains have served as focal points for research on the development of mathematical concepts in children The areas of addition and subtraction algebra rational numbers and geometry are notable examples Whether a similar organizational structure will prevail for programs of research that integrate the study of teaching learning curriculum and assessment is an open question The perspectives presented in this volume illustrate the potential for adopting this perspective

The Whole Person Mark H. Bickhard, 2024-11-27 The Whole Person explores the realms of theory and philosophy concerning minds and persons This book presents models of the emergent realization of multiple mental processes and of the constitution of social realities and social persons Each chapter explores prevalent theoretical and philosophical assumptions that obstruct the acceptance of models depicting emergent realization offering analyses of these barriers and demonstrating ways to overcome them Rooted in the framework of process metaphysics this book models metaphysically genuine emergence paving the way for a comprehensive model of multifarious normative emergences These normative emergences include phenomena such as function dysfunction representational truth and falsity rational irrational ethical unethical and others that shape our mental and social landscapes The discussion extends to the macro evolutionary culmination of mental processes in a model of reflective consciousness The book then extends its exploration to the foundational role of mental processes in the emergence of social realities and persons with language acting as a core element in these emergences Addressing evolutionary aspects brain processes developmental processes moral normativities and self consistency considerations The Whole Person presents a holistic integration of decades of constructive work Endorsements This ambitious yet unpretentious carefully constructed and argued book is a must read for anyone with serious interest in the nature of persons and the psychology of personhood

Mark Bickhard's *The Whole Person* is a sustained and convincing narrative about our individual and collective evolution and emergence as the unique beings that we are. Of particular interest is his account of the emergence of persons as *homo socius*. Here Professor Bickhard captures key but often overlooked historical sociocultural and socio-developmental dynamics and processes that make us who we are: a species constantly interacting with each other and the world in a never-ending process of mutual co-constitution. By theorizing a process metaphysics replete with emergent normativity that does not clash with a naturalistic ontological psychology, Bickhard takes a giant step toward seeing ourselves as we are and as we might become.

Jack Martin, Professor Emeritus, Simon Fraser University: A typical psychological theory offers narrow generalizations about data sets obtained by semi-proprietary empirical methods. The basic empirical research on which such theories have depended is in crisis: tremendous effort has gone into ill-motivated studies applying statistics inappropriately to inadequate samples, too often generating irreproducible results. The kind of theory that psychology needs is broad and deep, pays no respect to boundaries between specialties, makes falsifiable predictions, and answers to arguments in principle. *The Whole Person* presents just such a theory, psychologists, whether their aim is to extend it and support it or to challenge it and refute it, will benefit from studying it closely.

The World of Protracted Conflicts Michael Brecher, 2016-05-26. *The World of Protracted Conflicts* seeks to frame the models to answer three crucial questions about interstate protracted conflict: what are the most likely conditions for the onset of a protracted conflict, its escalation, persistence, and its termination? It presents the findings on protracted conflict occurrence, continuation, and resolution through testing these models and their derived hypotheses against the evidence from 33 interstate protracted conflicts in the last century. These findings will in turn shed further light on the conflict-crisis-war linkage. This book examines and explains patterns that exist in the eruption, evolution, and winding down of these conflicts through a systematic comparison of recent and contemporary PCs.
