Building and Using Datasets on Armed Conflicts Mayeul Kauffmann, 2008-04-15 The so called hard or exact sciences with their necessary emphasis on technology and on the technical are hardly reputed for being very human and conversely the so called human sciences are often pronounced as soft because they cannot be based on the certainties associated with the former The search for truth which is the essential dimension of the construction of a peaceful world therefore has to navigate between considerations of a philosophical nature and the concrete data of the hard sciences If ever since the humanism of the Renaissance period we have been happy to lay claim to the wisdom of one of its great writers Rabelais who taught a moral lesson to the young Pantagruel with the neat formula science without conscience is the ruin of the soul we nonetheless stand in awe before modern scientific advances and the extraordinary achievements that they have opened up If everything is not permissible at least everything seems possible High Throughput Screening John P.
